Skippy Dies Paul Murray,2010-08-31 The bestselling and critically acclaimed novel from Paul Murray, Skippy Dies, shortlisted for the 2010 Costa Book Awards, longlisted for the 2010 Booker Prize, and a finalist for the National Book Critics Circle Award. Why does Skippy, a fourteen-year-old boy at Dublin's venerable Seabrook College, end up dead on the floor of the local doughnut shop? Could it have something to do with his friend Ruprecht Van Doren, an overweight genius who is determined to open a portal into a parallel universe using ten-dimensional string theory? Could it involve Carl, the teenage drug dealer and borderline psychotic who is Skippy's rival in love? Or could the Automator—the ruthless, smooth-talking headmaster intent on modernizing the school—have something to hide? Why Skippy dies and what happens next is the subject of this dazzling and uproarious novel, unraveling a mystery that links the boys of Seabrook College to their parents and teachers in ways nobody could have imagined. With a cast of characters that ranges from hip-hop-loving fourteen-year-old Eoin MC Sexecutioner Flynn to basketball playing midget Philip Kilfether, packed with questions and answers on everything from Ritalin, to M-theory, to bungee jumping, to the hidden meaning of the poetry of Robert Frost, Skippy Dies is a heartfelt, hilarious portrait of the pain, joy, and occasional beauty of adolescence, and a tragic depiction of a world always happy to sacrifice its weakest members. As the twenty-first century enters its teenage years, this is a breathtaking novel from a young writer who will come to define his generation.

On discovering her murdered husband's body, an eighteenth-century Irish noblewoman drinks handfuls of his blood and composes an extraordinary lament. Eibhlín Dubh Ní Chonaill's poem travels through the centuries, finding its way to a new mother who has narrowly avoided her own fatal tragedy. When she realizes that the literature dedicated to the poem reduces Eibhlín Dubh's life to flimsy sketches, she wants more: the details of the poet's girlhood and old age; her unique rages, joys, sorrows, and desires; the shape of her days and site of her final place of rest. What follows is an adventure in which Doireann Nı´Ghrıófa sets out to discover Eibhlín Dubh's erased life—and in doing so, discovers her own. Moving fluidly between past and present, quest and elegy, poetry and those who make it, A Ghost in the Throat is a shapeshifting book: a record of literary obsession; a narrative about the erasure of a people, of a

language, of women; a meditation on motherhood and on translation; and an unforgettable story about finding your voice by freeing another's.

Disseminating Security Updates at Internet Scale Jun Li,Peter Reiher,Gerald J. Popek,2012-10-23 Disseminating Security Updates at Internet Scale describes a new system, Revere, that addresses these problems. Revere builds large-scale, self-organizing and resilient overlay networks on top of the Internet to push security updates from dissemination centers to individual nodes. Revere also sets up repository servers for individual nodes to pull missed security updates. This book further discusses how to protect this push-and-pull dissemination procedure and how to secure Revere overlay networks, considering possible attacks and countermeasures. Disseminating Security Updates at Internet Scale presents experimental measurements of a prototype implementation of Revere gathered using a large-scale oriented approach. These measurements suggest that Revere can deliver security updates at the required scale, speed and resiliency for a reasonable cost. Disseminating Security Updates at Internet Scale will be helpful to those trying to design peer systems at large scale when security is a concern, since many of the issues faced by these designs are also faced by Revere. The Revere solutions may not always be appropriate for other peer systems with very different goals, but the analysis of the problems and possible solutions discussed here will be helpful in designing a customized approach for such systems.

Evaluation of the Updated Site-Specific Risk Assessment for the National Bio- and Agro-Defense Facility in Manhattan, Kansas National Research Council,Division on Earth and Life Studies,Board on Agriculture and Natural Resources,Board on Life Sciences,Committee on the Evaluation of the Updated Site-Specific Risk Assessment for the National Bio- and Agro-Defense Facility in Manhattan, Kansas,2012-09-24 Safeguarding U.S. agriculture from foreign animal diseases and protecting our food system require cutting-edge research and diagnostic capabilities. The Department of Homeland Security (DHS) and the U.S. Department of Agriculture (USDA) have embarked on an important mission to replace the aging Plum Island Animal Disease Center (PIADC) with a new facility, the National Bio- and Agro-Defense Facility (NBAF). When operational, this new facility would be the world's fourth biosafety level-4 laboratory capable of large animal research. It would serve as a critical world reference laboratory for identifying emerging and unknown disease threats, and would thus be a critical asset in securing the future health, wealth, and security of the nation. DHS selected Manhattan, Kansas, as the site for the new NBAF after an extensive site-selection process that involved an environmental impact statement. The Government Accountability Office (GAO) raised concerns about DHS's analysis of the potential spread of foot-and-mouth disease virus (FMDv), one of the most serious foreign animal disease threats. Congress directed DHS to conduct a site-specific risk assessment (SSRA) for the NBAF, instructed the National Research Council (NRC) to independently evaluate the SSRA, and prohibited obligation of NBAF construction funds until the NRC review was complete. Congress mandated that DHS revise its SSRA to address shortcomings of the 2010 SSRA, directed the NRC to evaluate the updated SSRA (uSSRA), and again prohibited obligation of construction funds until the completion of the second review. The scope for both of these SSRA reports addressed accidental release of pathogens from the NBAF in Manhattan, Kansas and excluded terrorist acts and malicious threats from its risk assessments. Evaluation of the Updated Site-Specific Risk Assessment for the National Bio- and Agro-Defense Facility in Manhattan, Kansas is the evaluation of the final uSSRA.
