Utility Emily Schwend,2017-01-01 Marking the tenth anniversary of the Yale Drama Series for emerging playwrights, Emily Schwend's powerful work centers on Amber, a young woman struggling to raise a family in East Texas. Amber is juggling two nearly full-time jobs and three kids. Her on-again, off-again husband Chris is eternally optimistic and charming as hell, but rarely employed. The house is falling apart and Amber has an eight-year-old's birthday party to plan. --Amazon.com.

Water, Electricity, and the Poor Kristin Komives,World Bank,2005 This book reviews the prevalence and variants of consumer subsidies found in the

developing world and the effectiveness of these subsidies for the poor. It places consumer subsidies in a broader social protection framework and compares them with poverty-focused programmes in other sectors using a common metric. It concludes that the most common subsidy instruments perform poorly in comparison with most other transfer mechanisms. Alternative consumption and connection subsidy mechanisms show more promise, especially when combined with complementary non-price approaches to making utility services accessible and affordable to poor households. The many factors contributing to those outcomes are dissected, identifying those that can be controlled and used to improve performance.

Electric Utility Resource Planning Steven Sim,2017-12-19 Most people—including many legislators, regulators, and other decision makers in the electric utility industry—have misconceptions about how electric utilities really work and plan for the future. This lack of understanding can lead to poorly informed decisions and policies that directly affect the choices utilities must make. Using easy-to-understand text and examples, *Electric Utility Resource Planning: Economics, Reliability, and Decision-Making* clarifies how utilities operate their systems and prepare for the future. This explanation will show readers that both expected and counterintuitive results can occur (i.e., conservation might result in higher air emissions, or lowering costs could lead to higher electric rates). Taking readers step by step through this process, the book (in the following order): Creates a hypothetical utility Explains how and why a utility operates its system of generating units Discusses the planning methods that a utility would (or should) use Guides readers through each stage of a planning analysis for the hypothetical utility, examining various resource options (conservation, new power plants, and solar) In addition, the author

introduces four Fundamental Principles of Resource Planning that should guide utilities. He also offers opinions on how certain trends in utility regulation and legislation can hinder utility planners' efforts to identify and select the best resources for the utility's customers. With this book, author Dr. Steven Sim applies his experience and insights from more than two decades of resource planning for Florida Power and Light (FPL). As one of the largest utilities in the United States, FPL has faced a multitude of resource planning challenges, and Dr. Sim has performed and supervised thousands of analyses designed to meet these obstacles. He has also served as an FPL witness in regulatory hearings on a wide variety of topics, ranging from the economic implications of nuclear, conservation, coal, gas, and other resource options, to the non-economic impacts (air emissions, fuel usage, system reliability, etc.) they present.

Subsurface Utility Engineering Information Management for Airports James H. Anspach, 2012 This synthesis study is intended to provide airport operators, airport service providers, and utilities/infrastructure owners with ways in which information on subsurface utilities is collected, maintained, and used by airports, their consultants, and the Federal Aviation Administration (FAA) to increase the effectiveness of and enhance safety during infrastructure development programs at airports. It compares the current state of technology and effective processes from other industry sectors with what airports do today, allowing airports to consider areas for improvement. To gather

relevant information on current practices, literature was reviewed and 16 airports were surveyed.

Snapping Cords Morris Llewellyn Cooke, 2015-08-05 Excerpt from Snapping Cords: Comments on the Changing Attitude of American Cities Toward the Utility Problem The basic fact underlying any discussion of municipal utilities is the essential solidarity of the private interests which control them. Of this oneness in method and mutuality of purpose some may be legitimate and may lead to efficiency. Much of it, however, is short-sighted, non-dividend producing and antisocial. Not a little of it is clearly against existing statutes. In all this planning the security floater is in supreme authority. The engineer, the scientist and the administrator all take their orders from the investment bankers. This alliance of those that control - even if they do not own - these properties is brought about through a widespread, unwritten and sometimes unrecognized system of exchange of courtesies rather than through definite business associations of types either warranted or prohibited by law. Many of the agencies through which this control is made effective do not see in themselves cogs in a well-nigh invincible system. What we shall call courtesy for the lack of a better name has become such a preponderant factor in the utility situation that if it could be brought about that all the laws were scrupulously obeyed the present status would remain practically unaltered. The utility problem through its bearing on crooked politics and bad government has become almost the crux of

the municipal situation and as such its solution is, in one sense, the key to national prosperity. These lectures are intended as a statement of conditions as we who represent the cities see them, together with certain suggestions as to the lines along which I believe progress can and will be made. Undoubtedly the foundations on which this great utility structure rests are slipping and the cords which have bound us as a people to inefficiency and venality are snapping. During the past three years, while Director of Public Works of the City of Philadelphia, it has been my duty to study the ramifications of these interests and the destinations toward which they are steering.
