**Neural Integration and Behavior** D.C. Sandeman,1982-05-28 Neural Integration and Behavior examines the best neuroethologically researched systems in crustaceans. Research on these systems varies, with emphasis placed on physiological or behavioral aspects. The book places less emphasis on behavior and more on the interactions between neural elements. It presents information gathered from each system and its contribution to the nervous system. This volume provides a review of the ground won by neuroethologists in their study of crustaceans. It heralds a new and significant step in bridging the gap between the physiologists and the ethologists, namely, the search for neural mechanisms that underlie variability—the essence of animal behavior. The discussion gives different insights on various aspects of crustacean biology. This book is a valuable source for zoologists, paleontologists, ecologists, physiologists, endocrinologists, morphologists, pathologists, and fisheries biologists, and an essential reference work for institutional libraries.

*Lithium-ion Battery Materials and Engineering* Malgorzata K. Gulbinska,2014-09-06 Gaining public attention due, in part, to their potential application as energy storage devices in cars, Lithium-ion batteries have encountered widespread demand, however, the understanding of lithium-ion technology has often lagged behind production. This book defines the most commonly encountered challenges from the perspective of a high-end lithium-ion manufacturer with two decades of experience with lithium-ion batteries and over six decades of experience with batteries of other chemistries. Authors with years of experience in the applied science and engineering of lithium-ion batteries gather to share their view on where lithium-ion technology stands now, what are the main challenges, and their possible solutions. The book contains real-life examples of how a subtle change in cell components can have a considerable effect on cell's performance. Examples are supported with approachable basic science commentaries. Providing a unique combination of practical know-how with an in-depth perspective, this book will appeal to graduate students, young faculty members, or others interested in the current research and development trends in lithium-ion technology.

*Wildfire Risk* Wade E. Professor Martin,Carol Professor Raish,Brian Professor Kent,2010-09-30 The continuing encroachment of human settlements into fire-prone areas and extreme fire seasons in recent years make it urgent that we better understand both the physical and human dimensions of managing the risk from wildfire. Wildfire Risk follows from our awareness that increasing public knowledge about wildfire hazard does not necessarily lead to appropriate risk reduction behavior. Drawing heavily upon health and risk communication, and risk modeling, the authors advance our understanding of how individuals and communities respond to wildfire hazard. They present results of original research on the social, economic, and psychological factors in responses to risk, discuss how outreach and education can influence behavior, and consider differences among ethnic/racial groups and between genders with regard to values, views, and attitudes about wildfire risk. They explore the role of public participation in risk assessment and mitigation, as well as in planning for evacuation and recovery after fire. Wildfire Risk concludes with a dedicated section on risk-modeling, with perspectives from decision sciences, geography, operations research, psychology, experimental economics, and other social sciences.

*Impact of Nonlinearities on Fiber Optic Communications* Shiva Kumar,2011-03-23 This book covers the recent progress in fiber-optic communication systems with a main focus on the impact of fiber nonlinearities on the system performance. Over the past few years, there has been significant progress in coherent communication systems mainly because of the advances in digital signal processing techniques. This has led to renewed interest in fiber linear and nonlinear impairments and techniques to mitigate them in electrical domain. In this book, the reader will find all the important topics of fiber optic communication systems in one place with in-depth coverage by the experts of each subtopics. Pioneers from each of the sub-topics have been invited to contribute. Each chapter will have a section on fundamentals, review of literature survey and the recent developments. The reader will benefit from this approach since many of the conference proceedings and journal articles mainly focus on the authors' research work without spending space on preliminaries.

**Hadron models and related New Energy issues** Florentin Smarandache,V. Christianto,2007-01-01 The present book covers a wide-range of issues from alternative hadron models to their likely implications to New Energy research, including alternative interpretation of low-energy reaction (coldfusion) phenomena.The authors explored some new approaches to describe novel phenomena in particle physics. M Pitkanen introduces his nuclear string hypothesis derived from his Topological Geometrodynamics theory, while E. Goldfain discusses a number of nonlinear dynamics methods, including bifurcation, pattern formation (complex Ginzburg-Landau equation) to describe elementary particle masses. Fu Yuhua discusses a plausible method for prediction of phenomena related to New Energy development.F. Smarandache discusses his unmatter hypothesis, and A. Yefremov et al. discuss Yang-Mills field from Quaternion Space Geometry. Diego Rapoport discusses link between Torsion fields and Hadronic Mechanic.A.H. Phillips discusses semiconductor nanodevices, while V. and A. Boju discuss Digital Discrete and Combinatorial methods and their likely implications to New Energy research. Pavel Pintr et al. describe planetary orbit distance from modified Schrodinger equation, and M. Pereira discusses his new Hypergeometrical description of Standard Model of elementary particles.The present volume will be suitable for researchers interested in New Energy issues, in particular their link with alternative hadron models and interpretation.While some of these discussions may be found a bit too theoretical, our view is that once these phenomena can be put into rigorous theoretical framework, thereafter more 'open-minded' physicists may be more ready to consider these New Energy methods more seriously. Our basic proposition in the present book is that considering these new theoretical insights, one can expect there are new methods to generate New Energy technologies which are clearly within reach of human knowledge in the coming years.
