Preventing Web Attacks with Apache Ryan C. Barnett, 2006-01-27 The only end-to-end guide to securing Apache Web servers and Web applications Apache can be hacked. As companies have improved perimeter security, hackers have increasingly focused on attacking Apache Web servers and Web applications. Firewalls and SSL won't protect you: you must systematically harden your Web application environment. Preventing Web Attacks with Apache brings together all the information you'll need to do that: step-by-step guidance, hands-on examples, and tested configuration files. Building on his groundbreaking SANS presentations on Apache security, Ryan C. Barnett reveals why your Web servers represent such a compelling target, how significant exploits are performed, and how they can be defended against. Exploits discussed include: buffer overflows, denial of service, attacks on vulnerable scripts and programs, credential sniffing and spoofing, client parameter manipulation, brute force attacks, web defacements, and more. Barnett introduces the Center for Internet Security Apache Benchmarks, a set of best-practice Apache security configuration actions and settings he helped to create. He addresses issues related to IT processes and your underlying OS; Apache downloading, installation, and configuration; application hardening; monitoring, and more. He also presents a chapter-length case study using actual Web attack logs and data captured "in the wild." For every sysadmin, Web professional, and security specialist responsible for Apache or Web application security.

Tenth Golden Strategies for Great Time Management Dr. Abdulwahab Bin Shmailan,2018-05-10 This is about time management and planning by using criteria that maintain the good investment of time in our lives. It is also one of the most important management factors for a mans success and goal achievement. Peter Drucker in 1982 said, Time is the most valuable resource for a manager. If he could not manage his time, he would not be able to manage anything. That is why time management is considered as one of the essential issues that man should care about. Most studies related to time management confirmed that good governance is closely related to performance, improvement, and productivity enhancement. Francis Bacon said, Time is the scale of management as money is the scale of commodities and goods. Although time is a unique commodity, it is equally given to each individual regardless of job or location. So time passes in a constant and limited speed. But it seems that no one has enough time. We also cannot create more time. We have to manage using the time given to us.
