**Autism Spectrum Disorders and AAC** Pat Mirenda, Teresa Iacono, 2009 The newest edition to the renowned AAC series from the leading authorities on the use of AAC with children and adolescents with autism.

Aided Augmentative Communication for Individuals with Autism Spectrum Disorders Jennifer B.

Ganz, 2014-05-16 Just as autism is a continuum of disorders, it is associated with a broad range of neurodevelopmental, social, and communication deficits. For individuals with autism spectrum disorders (ASD), augmentative and alternative communication (AAC) has a major impact on their daily lives, often reducing the occurrence of challenging behaviors. *Aided Augmentative Communication for Individuals with Autism Spectrum Disorders* is a practical guide to the field, offering readers a solid grounding in ASD, related complex communication needs (CCN), and AAC, especially visual and computer-based technologies. Widely used interventions and tools in AAC are reviewed—not just how they work, but why they work—to aid practitioners in choosing those most suited to individual clients or students. Issues in evaluation for aided AAC and debates concerning its usability round out the coverage. Readers come away with a deeper understanding of the centrality of communication for clients with ASD and the many possibilities for intervention. Key areas of coverage include: AAC and assessment of people with ASD and CCN. Interdisciplinary issues and collaboration in assessment and treatment. AAC intervention mediated by natural communication partners. Functional communication training with AAC. The controversy surrounding facilitated communication. Sign language versus AAC. *Aided Augmentative Communication for Individuals with Autism Spectrum Disorders* is an essential resource for clinicians/practitioners, researchers, and graduate students in such fields as child and school psychology, speech pathology, language education, developmental psychology, behavior therapy, and educational technology.

**Augmentative and Alternative Communication: Engagement and Participation** Erna Alant, 2016-12-30 *Augmentative and Alternative Communication: Engagement and Participation* reexamines the basic components of human communication based on the development of meaning between two people and provides a new theoretical framework for integrating the use of Augmentative and Alternative Communication (AAC) strategies into interpersonal interactions. As such, it is an indispensable resource for

speech-language pathologists, special education practitioners, and researchers in AAC, as well as for instructors and graduate students in the fields of speech and hearing sciences and special education. The book employs a creative synthesis of engagement (personal involvement) and participation (exchanges) to describe meaning-making and social closeness between partners. This process allows for the acknowledgment of different levels of shared meaning and outlines a novel approach to assessment and intervention. The book also describes the importance of integrating relational (interaction-oriented) as well as instrumental (goal-oriented) communication functions as essential in maintaining on-going relationships. Most resources in AAC tend to emphasize strategies for enhancing participation, rather than strategies associated with the development of engagement (being with) to enhance communication between communication partners. In contrast, this text uses interactions between users of AAC and their communication partners as a basis to explore the creative synthesis between engagement and participation to provide clinical guidelines for assessment and intervention in both interpersonal and classroom contexts. Key features: A novel theoretical approach focused on engagement and participation as core components in AAC intervention Emphasis on empathic listening skills of both communication partner and user of AAC strategies to facilitate engagement (emotional resonance) between them Guidance for teachers on the benefits of a meaning-based approach to communication in the classroom Application of empathic listening strategies to people with dementia to address an increasing need for care of patients with Alzheimer disease by caregivers and family members Integration of social media and face-to-face interactions as central to developing relationships in AAC interactions

**Augmentative and Alternative Communication Intervention** Janet L. Dodd, 2017-06-30 Augmentative and Alternative Communication Intervention: An Intensive, Immersive, Socially Based Delivery Model is ideal for school-based speech-language pathologists (SLPs) and an excellent resource for interventionists (special education teachers, ABA therapists) and SLPs working in other settings who wish to develop an intensive, immersive Augmentative and Alternative Communication (AAC)-based intervention through a three-phase intervention process: assessment, intervention planning, and intervention implementation. Written by an SLP who has worked in a public school setting and saw to the application of theory to practice, the text provides detailed information regarding working with children who have complex communication needs and the background knowledge necessary for successful implementation of the intervention approach. Included are considerations for vocabulary selection for the beginning communicator, how to create a symbolically rich environment, detailed intervention approaches, and progress monitoring strategies that establish appropriate, measurable goals. AAC will no longer be an alternative means of communication but a best practice means of teaching communication in the SLP's or interventionist's repertoire. Making the leap from the theoretical to the practical, this essential book: Describes the intervention needs of children with complex communication needs and the limitations of current approaches (e.g., PECS, Milieu Training, Functional Communication Training). Operationally defines the goal of AAC intervention, discussing its complexities, including the limitations of a pull-out model. Introduces the Intensive, Immersive, Socially Based Approach to Intervention and briefly describes each phase of the intervention process. Discusses how AAC assessments differ from traditional assessments of speech and language skills, as well as provides an overview of different assessment models and their contribution to the intervention process. Examines the importance of training support staff to key components of this intervention model. Contains information on the application of language-based intervention strategies to AAC. Talks about the importance of progress monitoring and how to use functional communication measures and communication sampling, a new and innovative technique

developed by the author, to monitor progress. Provides example lesson plans and example goals addressing each area of communicative competence. \*Disclaimer: Please note that ancillary content (such as documents, audio, and video, etc.) may not be included as published in the original print version of this book.

**Augmentative and Alternative Communication and Severe Disabilities** Erna Alant,Lyle Lloyd,2005-11-29 Communities and countries who are not affluent or economically and socially disadvantaged present their own set of intervention circumstances that need to be taken into account when planning intervention for people with disabilities particularly those with AAC need. These contexts provide not only professionals, but all partners involved in the intervention process with unique challenges that require a reevaluation of AAC intervention programmes. This book presents a different perspective on AAC intervention by focusing on the application of various AAC related issues within a poverty context. It is intended for advanced students and professionals across disciplines that are interested in extending their knowledge and critical thinking to advance issues surrounding AAC intervention within a poverty context.
