Wojciech W. Gasparski

Adrenalin Ghiyāth Rāsim Mad'hūn, 2017 Poetry. Middle Eastern Studies. Translated from the Arabic by Catherine Cobham. Here is ADRENALIN, Syrian-born, Stockholm-based Palestinian poet Ghayath Almadhoun's first collection to be published in English. This sinuous translation comprises poems that span years and continents, that circulate between cities, ideas, lovers, places of refuge, war zones, time zones, histories. Here is a vital, relentless, intertextual voice that refuses arrest by sentimentality, that pursues the poetry coursing underneath the poetry.

The Forms of Action at Common Law Frederic William Maitland, 1936-01-03 This study looks at the forms of action and how they are a part of the structure upon which rests the whole common law of England.

Action, Freedom and Responsibility Subasini Barik, 2022-10-19 This book, a work on human doing, analyses and applies three central aspects of human life – Action, Freedom and Responsibility – in the wide spectrum of the Philosophy of Mind. Reflections on these issues and their interconnections have a significant effect on the Philosophy of Value and application of ethical theories in practical life. This book even reconstructs the conceptual connection between action and freedom, on the one hand, and that between freedom and responsibility, on the other. It also puts the concepts of freedom and determinism to critical test and reinterprets them from different angles and perspectives. The conventional doctrine of karma, based on the teachings of the BhagavadgĀtā, is relieved from its usual deterministic presentation and a logically reasonable explanation is offered. Human actions and human agency are central concepts in the philosophy of mind and action. Free will and responsibility constitute the bedrock of the moral life of the human agents and the book pinpoints that freedom is meant to undertake the goal-oriented actions. It is, therefore, focused on the enquiry into the various

aspects of philosophy of mind, as well as the philosophy of value.

Action Learning Wojciech W. Gasparski, 2017-11-30 Praxiology is the study of working and doing from the point of view of effectiveness. It has three components: analysis of concepts involving purposive actions; critique of modes of action from the viewpoint of efficiency; and normative advisory aspects in recommendations for increasing human efficacy. This sixth volume of the Praxiology series focuses on action learning. Learning from distinguishable action is surprisingly different than learning from a subject expert in human or book form. For those who have worked with and in action learning, the latest form is always distinguishably different from a former experience. Action learning programs are not, in general, intended to tackle puzzles, namely, questions to which an answer may be said to exist even if that answer is difficult to find; action learning is intended to help to develop the ability to tackle problems or opportunities, of which different persons, all experienced, intelligent, and motivated, might well advocate different courses of action, all reasonable. The essentials of action learning, according to this volume, are: there can be no learning unless the participant receives feedback about his/her performance; participants learn only of their own volition and never at the will of others; the volition to learn is most readily engendered by the lure of success or by the fear of calamity. Building upon these essentials, the authors view action learning as a process of inquiry beginning with the experience of not knowing what to do next, and finding that an answer is not available from current expertise. All chapters in this volume are sound contributions to the continuing debate on the processes of learning from distinguishable action. Action Learning is intriguing reading for sociologists, philosophers, managers, and researchers of all disciplines.

Essays on Freedom of Action (Routledge Revivals) Ted Honderich, 2015-06-03 Essays on Freedom of Action, first published in 1973, brings together original papers by contemporary British and American philosophers on questions which have long concerned philosophers and others: the question of whether persons are wholly a part of the natural world and their actions the necessary effects of causal processes, and the question of whether our actions are free, and such that we can be held responsible for them, even if they are the necessary effects of casual processes. This volume will be of interest not only to those who are primarily concerned with philosophy but also to students in those many other disciplines in which freedom and determinism arise as problems.

American Men of Action Burton E. Stevenson, 2021-09-03 'American Men of Action' is Stevenson's exploration of the lives of some of the most notable men in American history. From Christopher Columbus to Melvil Dewey, he leaves no stone of American history unturned. His concise and intentional manner manages to make even the most mundane pieces of history captivating. An American author and librarian, Burton Egbert Stevenson (1872-1962) was born in Chillicothe, Ohio. After studying at Princeton, he fought in the First World War, founded a library in Camp Sherman, and worked at Chillicothe city library for an impressive 58 years. He also founded the American Library in Paris, during his posting as the European director of the Library War Service. Alongside this, he was also an author, writing and compiling over 50 books across his lifetime, his children's books and anthologies being the most well-known among them.

The Creativity of Action Hans Joas, 1996 Hans Joas is one of the foremost social theorists in Germany today. Based on Joas's celebrated study of George Herbert Mead, this work reevaluates the contribution of American pragmatism and European philosophical anthropology to theories of action in

the social sciences. Joas also establishes direct ties between Mead's work and approaches drawn from German traditions of philosophical anthropology. Joas argues for adding a third model of action to the two predominant models of rational and normative action—one that emphasizes the creative character of human action. This model encompasses the other two, allowing for a more comprehensive theory of action. Joas elaborates some implications of his model for theories of social movements and social change and for the status of action theory in sociology in the face of competition from theories advanced by Luhmann and Habermas. The problem of action is of crucial importance in both sociology and philosophy, and this book—already widely debated in Germany—will add fresh impetus to the lively discussions current in the English-speaking world.

Praxiology and the Reasons for Action Piotr Makowski, 2017-07-05 This volume explores two traditions in practical philosophy: action theory, which concerns the nature of motivation for human action, and praxiology, the study of human action. By bringing different perspectives together, the volume strives to contribute to the international debate on theories of reasons for action as a philosophy of action. The volume consists of three main parts. The first part, *Reasons for Action*, bridges the gap between reasons for action theories and praxiology. The second part of the volume, titled *Theories of Action*, explores philosophical approaches to action. Finally, in the third part, *Applications*, the contributors show several ways of applying praxiological ways of thinking and acting to the problems of reflection assessment, solving action incompleteness, and knowledge management. The ultimate goal of this volume is to broaden the scientific view of action: to establish a perspective on action that is permeated by moral theories on the one hand, and accounts focused

on efficiency and economy of action on the other hand. This work is the newest volume in Transaction's Praxiology series.

A Theory of Action Identification Robin R. Vallacher, Daniel M. Wegner, 2014-04-04 First published in 1985. A person may be caught in the midst of a patently ridiculous act, interrupted in a moment of apparent confusion, or even aroused from sleep, and yet respond to a query of What are you doing? with remarkable ease. The answer that is given is an identification of action. It is the central idea of this book that such action identifications perform pivotal functions in a broad range of psychological and social processes.
