Intelligent Interoperable Agent Toolkit (I2AT). ,2005 The challenge on this effort has been how to transition current agent technology in such a way that it is widely deployed. To date, building useful agent applications for C4ISR has required significant time and money and the services of specially skilled contractors. As a result, few attempts to deploy agent applications for military use have so far occurred. The Interoperable Intelligent Agent Toolkit (I2AT) seeks to address this road block to the widespread deployment of agent technology in Command, Control, and Combat Systems by providing a means for non-technical military personnel to build an agent system, thus enabling faster decision cycles and improved decision superiority. I2AT sufficiently facilitates information agent application construction to enable domain experts to modify, construct, and interconnect applications.

Agent-Based Software Development ,2004

Software Agent-Based Applications, Platforms and

Development Kits Rainer Unland, Matthias Klusch, Monique

Calisti, 2006-01-27 This book introduces major agent platforms,

frameworks, systems, tools, and applications. Each system is

described by their developers in sufficient detail so that the reader

can get a good understanding of the architecture, functionality, and

application areas of the system. All systems are running systems.

One main focus of the book lies on agent platforms and toolkits.

Intelligent Agents for Telecommunications Applications Sahin

Albayrak, 1998 Intelligent agent and distributed AI (DAI) approaches

attach specific conditions to cooperative exchanges between

intelligent systems, that go far beyond simple functional

interoperability. Ideally, systems that pursue local or global goals,

coordinate their actions, share knowledge, and resolve conflicts

during their interactions within groups of similar or dissimilar agents

can be viewed as cooperative coarse-grained systems. The

infrastructure of telecommunications is a world in transition. There

are a number of trends that contribute to this: convergence of

traditional telephony and data network worlds, blurring of

boundaries between public and private networks, complementary

evolution of wireline, wireless, and cable network infrastructures,

the emergence of integrated broadband multimedia networks and, of course, the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems.

Telecommunications applications pose strong requirements to agents such as: reliability, real-time performance, openness, security management and other integrated management, and mobility. In order to fulfil their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.

Mobility Aware Technologies and Applications Thomas

Magedanz, Ahmed Karmouch, Samuel Pierre, Iakovos

Venieris,2005-11-16 The beginning of the twenty-first century is characterized by global markets, and the mobility of people is becoming an important fact of life. Consequently, the mobile user is demanding appropriate technical solutions to make use of customized information and communication services. In this context the notion of next-generation networks (NGNs), which are driven by the convergence of the entertainment sector, the mobile Internet, and fixed/mobile telecommunications, is emerging. Such NGNs are aggregating a variety of different access networks and supporting the seamless connection of an open set of end-user devices, and due to the adoption of an all-IP network paradigm they enable a much better integration of voice and data services. Coincidentally the buzzword 'fixed mobile convergence' (FMC) describes the current trend towards providing common services across fixed and mobile networks resulting in the medium term in the full integration of fixed and mobile telecommunication networks. The adoption of appropriate middleware technologies and the provision of - called service delivery platforms driven by the ongoing innovation in the field of information technologies provides today the technical foundation for supporting terminal, personal and service mobility and thus the implementation of real seamless information and

communication services. Furthermore, users are nowadays looking, in light of an omnipresent service environment, for a much higher degree of customization and context awareness in the services they use. The papers in this volume look at these enabling mobility-aware technologies and their use for implementing mobility-aware and context-aware applications.

Mobile Agents Peter Braun, Wilhelm R. Rossak, 2005-01-21

Mobile agents are software nomads that act as your personal representative, working autonomously through networks. They are able to visit network nodes directly using available computing power and are not limited by platform. This emerging field is now poised to become a cornerstone for new Web-based ubiquitous computing environments. *Mobile Agents* provides a practical introduction to mobile agent technology and surveys the state of the art in mobile agent research. Students and researchers can use the book as an introduction to the concepts and possibilities of this field and as an overview of ongoing research. Developers can use it to identify the capabilities of the technology to decide if mobile agents are the right solution for them. Practitioners can also gain hands-on experience in programming mobile agents through exploration of the source code for a complete mobile agent

environment available through the companion website.

- *Summarizes the state of the art in mobile agent research

- *Identifies the benefits and limitations of current mobile agent technology to help developers understand the possibilities of this new field
- *Extensive mobile agents web portal

Multi-Agent Systems Adelinde M. Uhrmacher, Danny Weyns, 2018-10-08

Methodological Guidelines for Modeling and Developing MAS-Based Simulations The intersection of agents, modeling, simulation, and application domains has been the subject of active research for over two decades. Although agents and simulation have been used effectively in a variety of application domains, much of the supporting research remains scattered in the literature, too often leaving scientists to develop multi-agent system (MAS) models and simulations from scratch. Multi-Agent Systems: Simulation and Applications provides an overdue review of the wide ranging facets of MAS simulation, including methodological and application-oriented guidelines. This comprehensive resource reviews two decades of research in the

intersection of MAS, simulation, and different application domains. It provides scientists and developers with disciplined engineering approaches to modeling and developing MAS-based simulations. After providing an overview of the field's history and its basic principles, as well as cataloging the various simulation engines for MAS, the book devotes three sections to current and emerging approaches and applications. Simulation for MAS – explains simulation support for agent decision making, the use of simulation for the design of self-organizing systems, the role of software architecture in simulating MAS, and the use of simulation for studying learning and stigmergic interaction. MAS for Simulation – discusses an agent-based framework for symbiotic simulation, the use of country databases and expert systems for agent-based modeling of social systems, crowd-behavior modeling, agent-based modeling and simulation of adult stem cells, and agents for traffic simulation. Tools – presents a number of representative platforms and tools for MAS and simulation, including Jason, James II, SeSAM, and RoboCup Rescue. Complete with over 200 figures and formulas, this reference book provides the necessary overview of experiences with MAS simulation and the tools needed to exploit simulation in MAS for future research in a vast array of applications

including home security, computational systems biology, and traffic management.

Mobile Opportunities and Applications for E-Service

Innovations Scupola, Ada, 2012-12-31 Mobile technology continues to shape our society, delivering information and knowledge right to our finger tips. It is only fitting that these advancements and opportunities are applied to the area of electronic services. Mobile Opportunities and Applications for E-Service Innovations brings together different perspectives on the understanding of e-service and mobile communication, as well as their effects on the fields of marketing, management, and information systems. The growth of e-services as it relates to business ☐to-business, business-to-consumer, consumer-to-consumer, are essential to the interests of professionals, academics, and researchers, as well as industry consultants.

Towards Knowledge Portals B. Detlor, 2004-05-31 Adopting an informational perspective towards knowledge work, this book investigates how enterprise portals can promote knowledge creation, distribution, and use. Moving beyond the design and delivery of portals as mere information retrieval tools, an enterprise portal is viewed as a shared information work space that can

facilitate communication and collaboration among organizational workers, as well as support the browsing, searching, and retrieval of information content. Adopting an information vantage point, the book uniquely explores the human issues surrounding enterprise portal adoption and use, as well as the utilization of intelligent agents to ameliorate the use of portals for knowledge-based tasks. The result is a novel, rich and comprehensive discussion on the factors affecting the design and utilization of enterprise portals for knowledge work, suitable for both graduate-level students and organizational workers alike.

**Mobile Agents For Telecommunications Applications:
Proceedings Of The First International Workshop** Ahmed

Karmouch, Roger Impey, 1999-09-24 A software agent has a spectrum of definitions. At one end of the scale are relatively simple, client-based software applications that can assist users in performing mundane tasks such as sorting e-mail or downloading web pages. This class of agents is often referred to as “personal assistant” agents. At the other end of the scale is the concept of sophisticated software entities possessing artificial intelligence that autonomously travel through a network environment and make complex decisions on a user's behalf. In telecommunications, the definition lies somewhere between those two extremes. This classification of mobile agents, although not strictly adhering to the definition of “intelligent agents” originally proposed by the artificial intelligence community, is generally acknowledged to be a useful categorization and has started to gain widespread acceptance. We therefore define a mobile agent as a program that acts on behalf of a user or another program and is able to migrate from host to host on a network under its own control. The agent chooses when and where it will migrate and may interrupt its own execution and continue elsewhere on the network. The agent returns results and messages in an asynchronous fashion. This volume discusses the emerging field of mobile software agents and their applications to

the area of telecommunications, such as active networks, e-commerce, the Internet, interactive QoS, network management, and feature interactions. It addresses the needs of a wide audience, including researchers, software agent systems and telecommunication applications designers, and users of software agents.

Software Applications: Concepts, Methodologies, Tools, and Applications Tiako, Pierre F., 2009-03-31 Includes articles in topic areas such as autonomic computing, operating system architectures, and open source software technologies and applications.

Intelligent Agents II – Agent Theories, Architectures, and Languages Michael Wooldridge, Jörg Müller, Milind Tambe, 1996-01-17 This book is based on the second International Workshop on Agent Theories, Architectures, and Languages, held in conjunction with the International Joint Conference on Artificial Intelligence, IJCAI'95 in Montreal, Canada in August 1995. The 26 papers are revised final versions of the workshop presentations selected from a total of 54 submissions; also included is a comprehensive introduction, a detailed bibliography listing 355 relevant publications, and a subject index. The book is structured

into seven sections, reflecting the most current major directions in agent-related research. Together with its predecessor, *Intelligent Agents*, published as volume 890 in the LNAI series, this book provides a timely and comprehensive state-of-the-art report.

Mobility Aware Technologies and Applications Ahmed

Karmouch, Larry Korba, Edmundo Madeira, 2005-01-14 It is becoming quite clear that there will be important technological advances in - bility and wireless connectivity, known as third-/fourth-generation (3G and 4G) mobile telecommunications systems. As a result we will be surrounded by ever-growing m- tidomain (technical and administrative) heterogeneous communications in both wired and wireless networks. This resulting environment deals with communication in m- tized networks, where people, devices, appliances and servers are connected to each other via different kinds of networks. Networks will be pervasive, ubiquitous, multis-vice, multioperator and multiaccess. The mobility trend will also be spurred forward by the growing availability of mobile-enabled handheld devices. Mobile systems are expected to provide mobile users with cost-effective, secure, yet ubiquitous service access anywhere and anytime. Users will then continue to enjoy the new-found freedom mobile access provides and will have increasingly

high expectations of mobility-aware applications that should be capable of seamlessly supporting the mobile lifestyle. The papers in this volume discuss issues from models, platforms, and architectures for mobility-aware systems to security, mobile agent technologies, sensitive communications, context awareness, mobile applications and management. They cover both practical experience and novel research ideas and concepts.

Lies People Tell Frank Runles, 2022-04-11 What if there was an easy way to know when someone is trying to deceive you, would you be interested? Would you like to be a better communicator and protect you and your family from shady characters? If you answered yes to either of these questions, then this book is for you! Frank Runles, veteran FBI Special Agent, reveals everything he has learned over a 20-year career spotting liars and exposing cheats using Deceptive Language Analysis. If you talk to people for a living such as a Human Resources Manager, counselor, coach, negotiator, salesperson, investigator, parent, or anyone in a leadership position, *Lies People Tell* is a must read! After reading this book, you will recognize the difference between a lie and deceptive language. Mr. Runles uses statements from the George Zimmerman/Trayvon Martin Case, Casey Anthony Case, Oscar Pistorius Case, and Susan Smith Case and statements he has collected over the years consulting with law enforcement to show the many ways language is used to mislead

and deceive. The author shows how recognizing deceptive language used in criminal investigations can also be applied to everyday activities such as interviewing a new babysitter, counseling a subordinate on their work performance, dealing with pushy salespeople, or determining why your teenage came home late from curfew.

Innovative Concepts for Autonomic and Agent-Based Systems

Michael G. Hinchey, Patricia Rago, James L. Rash, Christopher A. The 27 full papers presented are fully revised to incorporate reviewers' comments and discussions at the workshop. Topics addressed are social aspects of agents, agent architectures, autonomic systems, agent communities, and agent intelligence.
