Behavior Change Hank Fieger,2009 This insightful and personal handbook offers individuals from all walks of life a working guide to help them modify, improve, and change their behavior by replacing old patterns with more effective and productive ones.

The Handbook of Behavior Change Martin S. Hagger,Linda D. Cameron,Kyra Hamilton,Nelli Hankonen,Taru Lintunen,2020-07-15 Social problems in many domains, including health, education, social relationships, and the workplace, have their origins in human behavior. The documented links between behavior and social problems have compelled governments and organizations to prioritize and mobilize efforts to develop effective, evidence-based means to promote adaptive behavior change. In recognition of this impetus, The Handbook of Behavior Change provides comprehensive coverage of contemporary theory, research, and practice on behavior change. It summarizes current evidence-based approaches to behavior change in chapters authored by leading theorists, researchers, and practitioners from multiple disciplines, including psychology, sociology, behavioral science, economics, philosophy, and implementation science. It is the go-to resource for researchers, students, practitioners, and policy makers looking for current knowledge on behavior change and guidance on how to develop effective interventions to change behavior.

Environmental Health Noncompliance David Mikkola,2013-04-12 Sanitarians often wonder about the effectiveness of their site evaluations, whether or not the client listens and why noncompliance persists. Their academic training emphasizes a three-pronged approach (education, consultation and enforcement) toward the analysis and abatement of sanitation concerns; socio-economic factors, however, emphasize the use of legal means to gain compliance. Enforcement and legal actions push most clients toward short-term compliance; all too often, however, a roller-coaster effect occurs, where noncompliance occurs again and again. Why? This book analyzes the reasons, looking at ways to integrate health behavior models with the existing system to design more effective intervention strategies. Education, consultation and enforcement are melded to produce a more comprehensive approach to site evaluations. Community networking is advanced as an important support system often underutilized by health agencies. In the process, sanitarians are offered suggestions for using these ideas during their site visits.
