Alcohol Education David J. Hanson,1996-11-30 In spite of a massive national investment in alcohol education, the evidence clearly demonstrates that our current efforts are overwhelmingly ineffective and are often counterproductive. The assessment of the effectiveness of alcohol programs over the past 15 years reveals that those based on the responsible-use approach tend to be superior to those based on the abstinence approach. Hanson puts the historical relationship between Americans and alcohol into perspective, discusses federal policies on alcohol that are highly ideological and biased, and advocates the development of responsible-use curricula that will prepare students to be, as adults, responsible consumers of alcohol. While alcohol has been praised as a sign of refinement, a source of relaxation, and a complement to good times, it has also been cursed as the cause of disease and death. The temperance movement, which taught that alcohol was poison and that moderation in its use was no more possible than moderation in murder, has greatly influenced American thought and is reflected in our abstinence-oriented approach to alcohol education. Current programs reflect not only these abstinence origins but the inclusion of drug education several decades ago. Hanson finds that, despite good intentions, evidence indicates that this approach has proved ineffective. He considers the strong and often mixed feelings Americans have toward alcohol that are reflected in ever-changing public policy and concludes that the development and evaluation of alcohol education programs should be based on the best scientific evidence available rather than on political ideology. Recommendations for change in alcohol education are presented, with the most important being that we must promote the development and evaluation of diverse responsible-use curricula with the goal of reducing alcohol abuse.

Distilling Democracy Jonathan Zimmerman,1999 Zimmerman (educational history, New York U.) examines the history of Scientific Temperance Instruction, a curriculum on the evils of alcohol which was originally developed and advocated by a grassroots movement, and ultimately was mandated in all American schools for a time. He traces today's debate on drug and alcohol education to issues raised in this seminal episode. The debate over STI, claims Zimmerman, was really about the balance between expertise and populist desire in determining what should be taught to America's children. Alcohol Education Barbara Howe,2023-12-01 Alcohol education in the 1980s was receiving greater emphasis in the training and practice of a wide range of health and welfare professionals. As we became more aware of the risks associated with excessive drinking, this practical, straightforward guide, originally published in 1989, would have been essential reading for health and welfare workers who were keen to develop the alcohol education aspect of their work and enable their clients and patients to use alcohol in a

harm-free way. Barbara Howe looks at alcohol education in context, clarifying its role and place in the day-to-day work of health and welfare professionals at the time. She also discusses common myths and misunderstandings about alcohol among professionals and their clients. She describes various approaches to alcohol education and includes a series of practical exercises for use with individuals and families, aimed at increasing professionals' confidence and competence in broaching the subject of alcohol. Although working practices may have changed since first publication, much of this title will still be useful today.

Alcohol Education and Young Offenders Steve Baldwin, 2012-12-06 Since the establishment of the first alcohol education course (ABC) for young offenders in 1981, this form of service delivery has been expanded across the United Kingdom. While some before-and-after data have been reported, no controlled evaluations have been completed on effectiveness with this type of intervention. The present research reports a series of evaluation studies to investigate the impact of ABCs on offending and drinking behavior. Young offenders were recruited from local courts. The first study, completed in Dundee, reported results from a comparative evaluation between two types of ABCs. As an attention-placebo study, one group received a behavioral ABC with program contents designed to reduce drinking and offending behaviors. Some dependent variable differences between the two groups were observed at follow-up. The second study was established in Glasgow as a replication of the main study. The third study used a quasi-experimental design to establish a no-intervention control group in the Perth courts. Young offenders were recruited to complete screening interviews, without any intervention. The intervention group was recruited from courts in Forfar, a similar rural town. This group completed an information-based ABC, using educational materials about alcohol and its effects. Some dependent variable differences were observed at follow-up. The fourth study was based in a Young Offender Institution at Forfar. Prerelease young offenders were

randomly assigned to either a no-intervention control group or a behavioral ABC group. Some dependent variable differences were reported at follow-up.
