Spying Software Development in Google Android Fissha

SeyoumTeshome,2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences , language: English, abstract: The main purpose was to study the concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

How To Protect Yourself From Adware And Spyware Bill Medina, 2021 What is spyware? What is adware? You've probably heard of them because everyone that gets online is either bombarded with information about the products that can help to protect against these two things or get so much spam that they've had to remove it from their system. Spyware and adware are two separate things but can be lumped together for one reason. That is that they are merciless in what they can do to your computer and to you. They risk your sanity with pop up ads. They risk your computer too, as too many pieces of adware or spyware on your computer and it will no longer work well. And, they will risk your personal identity, too. Yet, there is much you can do for protection from these problems. The solution is twofold. You must get rid of any type of spyware or adware that is lurking in your computer right now. Then, you need to protect yourself from it entering into your system again. The information and solutions you need, are within this e-book.
