Software and Mind Andrei Sorin, 2013-01-01 Addressing general readers as well as software practitioners, *Software and Mind* discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies. Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities. But, while useful in fields like mathematics and manufacturing, this idea is generally worthless, because most aspects of the world are too complex to be reduced to simple hierarchical structures. Our software-related affairs, in particular, cannot be represented in this fashion. And yet, all programming theories and development systems, and all software applications, attempt to reduce real-world problems to neat hierarchical structures of data, operations, and features. Using Karl Popper's famous principles of demarcation between science and pseudoscience, the book shows that the mechanistic ideology has turned most of our software-related activities into pseudoscientific pursuits. Using mechanism as warrant, the software elites are promoting invalid, even fraudulent, software notions. They force us to depend on generic, inferior systems, instead of allowing us to develop software skills and to create our own systems. Software mechanism emulates the methods of manufacturing, and thereby restricts us to high levels of abstraction and simple, isolated structures. The benefits of software, however, can be attained only if we start with low-level elements and learn to create complex, interacting structures. Software, the book argues, is a non-mechanistic phenomenon. So it is akin to language, not to physical objects. Like language, it permits us to mirror the world in our minds and to communicate with it. Moreover, we increasingly depend on software in everything we do, in the same way that we depend on language. Thus, being restricted to mechanistic software is like thinking and communicating while being restricted to some ready-made sentences supplied by an elite. Ultimately, by impoverishing software, our elites are achieving what the totalitarian elite

described by George Orwell in Nineteen Eighty-Four achieves by impoverishing language: they are degrading our minds.

Enseñar en la universidad José Ignacio Aguaded Gómez, María del Carmen Fonseca Mora, 2007 Este texto aspira a servir como recurso e instrumento de apoyo para los profesores/as universitarios que deseen reflexionar sobre su docencia e innovar y mejorar los procesos de enseñanza-aprendizaje en las aulas universitarias. Los profundos cambios que está suponiendo la paulatina incorporación de la Universidad española al Espacio Europeo de Educación Superior demandan nuevas habilidades y conocimientos en los docentes universitarios para el fomento de contextos formativos donde necesariamente ha de primar la innovación, la excelencia y la adaptación al cambiante entorno social. En esta línea, este manual integra experiencias didácticas diversas y conocimiento especializado de expertos y profesionales de las distintas ramas del saber científico. La obra comienza con un marco teórico en el que se definen las claves para los cambios metodológicos y la innovación en la universidad partiendo del necesario protagonismo de los estudiantes para adquirir competencias profesionales. Las experiencias de innovación que contiene este libro se apoyan en el aprendizaje autónomo que otorga al docente el papel de guía para que el alumnado haga el uso adecuado de las fuentes de conocimiento. Otras claves lo son, por citar algunas, el aprendizaje cooperativo, la evaluación continua desde la tutoría y tutorización individualizada; la docencia de asignaturas en lengua inglesa para facilitar la movilidad del alumnado, el uso de las TIC o la creación de materiales interactivos que motiven al alumnado.
