Availability Robert J. Wicks, 2015-11-20 For almost thirty years, Availability has been a trusted guide for cultivating openness and being present to God, self, and others. In this new edition, Robert Wicks describes availability as a challenging but spiritually rewarding way to live a more balanced life. Drawing insights from his spiritual mentors Henri Nouwen and Thomas Merton, Wicks shows how freely entering into the turmoil and joy of other people's lives can lead to deeper self-knowledge and a powerful encounter with Christ. In this simple, accessible book written in his characteristic warm and direct style, Wicks shows how self-awareness, compassion for others, and prayer are but different turns on the same road of finding and living the Truth. Wicks looks at the three dimensions of spirituality through the lens of availability. Looking first at self-awareness, he offers brief chapters on forgiveness, clarity, and the uniqueness of each person. In part two, he examines availability to others as a twofold challenge: negotiating the difficulties inherent in relationships and entering into others' pain. In part three, Wicks explores availability to God, focusing on letting go and experiencing him.

Achieving High Availability on Linux for System z with Linux-HA Release 2 Lydia Parziale,Antonio Dias,Livio Teixeira Filho,Dulce Smith,Jin VanStee,Mark

Ver, IBM Redbooks, 2009-04-13 As Linux® on System z® becomes more prevalent and mainstream in the industry, the need for it to deliver higher levels of availability is increasing. IBM® supports the High Availability Linux (Linux-HA) project, which provides high availability functions to the open source community. One component of the Linux-HA project is the Heartbeat program, which runs on every known Linux platform. Heartbeat is part of the framework of the Linux-HA project. This IBM Redbooks® publication provides information to help you evaluate and implement Linux-HA release 2 by using Heartbeat 2.0 on the IBM System z platform with either SUSE® Linux Enterprise Server version 10 or Red Hat® Enterprise Linux® 5. To begin, we review the fundamentals of high availability concepts and terminology. Then we discuss the Heartbeat 2.0 architecture and its components. We examine some of the special considerations when using Heartbeat 2.0 on Linux on System z, particularly Linux on z/VM®, with logical partitions (LPARs), interguest communication by using HiperSockets™, and Shoot The Other Node In The Head (STONITH) by using VSMERVE for Simple Network IPL (snIPL). By reading this book, you can examine our environment as we outline our installation and setup processes and configuration. We demonstrate an active and passive single resource scenario and a quorum scenario by using a single resource with three guests in the cluster. Finally, we demonstrate and describe sample usage scenarios.

Improving z/OS Application Availability by Managing Planned Outages Frank Kyne, Andy Clifton, Justin Deane, Fernando Ferreira, Richard Gunjal, Chuck Laurent, John Papp, Judy Ruby-Brown, Maida Snapper, Michael Stephen, Dave Viguers, Marna Walle, Yvonne Zemotel, IBM Redbooks, 2014-12-22 This IBM® Redbooks® publication is intended to make System Programmers, Operators, and Availability Managers aware of the enhancements to recent releases of IBM z/OS® and its major subsystems in the area of planned outage avoidance. It is a follow-on to, rather than a replacement for, z/OS Planned Outage Avoidance Checklist, SG24-7328. Its primary objective is to bring together in one place information that is already available, but widely dispersed. It also presents a different perspective on planned outage avoidance. Most businesses care about application availability rather than the availability of a specific system. Also, a planned outage is not necessarily a bad thing, if it does not affect application availability. In fact, running for too long without an IPL or subsystem restart might have a negative impact on application availability because it impacts your ability to apply preventive service. Therefore, this book places more focus on decoupling the ability to make changes and updates to your system from IPLing or restarting your systems.
