*Experience-Based Language Acquisition* Brian E. Pangburn, 2002-12 Almost from the very beginning of the digital age, people have sought better ways to

communicate with computers. This research investigates how computers might be enabled to understand natural language in a more humanlike way. Based, in part, on cognitive development in infants, we introduce an open computational framework for visual perception and grounded language acquisition called Experience-Based Language Acquisition (EBLA). EBLA can watch a series of short videos and acquire a simple language of nouns and verbs corresponding to the objects and object-object relations in those videos. Upon acquiring this protolanguage, EBLA can perform basic scene analysis to generate descriptions of novel videos. The general architecture of EBLA is comprised of three stages: vision processing, entity extraction, and lexical resolution. In the vision processing stage, EBLA processes the individual frames in short videos, using a variation of the mean shift analysis image segmentation algorithm to identify and store information about significant objects. In the entity extraction stage, EBLA abstracts information about the significant objects in each video and the relationships among those objects into internal representations called entities. Finally, in the lexical acquisition stage, EBLA extracts the individual lexemes (words) from simple descriptions of each video and attempts to generate entity-lexeme mappings using an inference technique called cross-situational learning. EBLA is not primed with a base lexicon, so it faces the task of bootstrapping its lexicon from scratch.

*The Future of the Profit Split Method* Gabriella Cappelleri, Robert Danon, Vikram Chand, 2020-11-23  
The Future of the Profit Split Method Edited by Robert Danon, Guglielmo Maisto, Vikram Chand & Gabriella Cappelleri Among the various transfer pricing methods, the profit split method (PSM) is under the spotlight after the OECD's Base Erosion and Profit Shifting (BEPS) project. However, both expert analysis and experience indicate that this method is not straightforward either for taxpayers to apply or for tax administrations to evaluate. In this thorough and detailed commentary – the first book to analyse this increasingly adopted transfer pricing method – notable scholars and practitioners working in the international tax community express their views on the method, answering some unresolved questions and highlighting issues that are still open and pending, especially in light of the digitalization of the economy. Crucial issues covered by the contributors include the following: choice of the appropriate splitting factors, their relative weights, and valuation of the contributions; uncertainties and outcomes potentially not aligned with the arm's-length standard; possible role of assessments made by the European Commission on State aid; nexus with the work done by the EU Joint Transfer Pricing Forum; impact of profit split on indirect taxes (VAT/customs tax/excise tax); and application to digital business models and, in general, to the digitalized economy. Moreover, relevant experience of applying this method in France, Germany, Italy, Spain,

Switzerland, the United Kingdom, and the United States is provided. A concluding chapter also deals with selected industry experiences. Due to a high level of uncertainty in alignment with international guidance in the application of the PSM – and to the underdeveloped nature of current literature on the subject – there is a need for this book because both tax administrations and taxpayers, going forward, will apply the PSM extensively. The book is highly relevant for policymakers, tax administrations, practitioners and academics engaged in the areas of international taxation, transfer pricing and tax policy.

**Fundamentals of International Transfer Pricing in Law and Economics** Wolfgang Schön, Kai A. Konrad, 2012-02-15 The taxation of multinational corporate groups has become a major concern in the academic and political debate on the future of international taxation. In particular the arm's length standard for the determination of transfer prices is under increasing pressure. Many countries and international bodies are now taking a closer look at the use of transfer prices for profit shifting and are exploring alternative mechanisms such as formulary apportionment for the allocation of taxing rights. With regard to this topic, this volume is the first to offer a concise analysis of transfer pricing in the international tax arena from an interdisciplinary legal and economic point of view. Fundamentals such as the efficient allocation of resources within multi-unit firms and distortions between different goals of transfer pricing as well as different aspects of it in tax and corporate law, the traditional OECD approach and practical aspects concerning intangibles, capital and risk allocation are covered by outstanding authors.

**Towards a Neutral Formulary Apportionment System**

**in Regional Integration** Shu-Chien Chen, 2023-03-09

International tax regimes and practices are heavily criticized for failing to fairly levy corporate tax on giant multinational taxpayers in the current globalized and digitalized world. This important and far-seeing book demonstrates how formulary apportionment (FA) – an approach by which a multinational corporation pays each jurisdiction’s corporate tax based on the share of its worldwide income allocated to that jurisdiction – can achieve the much-sought goal of aligning value creation and taxation. The author, through an intensive analysis of the European Union’s (EU’s) Common Consolidated Corporate Tax Base (CCCTB) Directive Proposal(s) and comparison to the United States (US’s) formulary apportionment experience, shows how the perceived problems with an FA system can be overcome and lays out the necessary elements for its feasibility. With detailed attention to the debates around formulary apportionment and its theoretical foundations, the book provides a blueprint for rebuilding the normative framework for the EU’s tax reform by clearly analysing the implications of the following and more: theorising public benefits to be represented by taxation; reorganising different economic theories about tax neutrality and tax justice; advancing the comparative legal research methodology to analyse law reform by combining the functional approach and the problem-solving approach; designing the logical formulary apportionment system for digital economy; ensuring the removal of the incentive for multinationals to shift reported income to low-tax

locations; reducing the tax system's complexity and the administrative burden it imposes on firms; eliminating transfer pricing complexity for intra-firm transactions; achieving equal weighting of the sales factor, the labour factor, and the asset factor in the formula; application of 'destination-based' rule for attributing the sales factor; and replacing the traditional permanent establishment nexus with a 'factor presence nexus'. The presentation incorporates extensive comparison between the EU's formulary apportionment tax reform option and FA systems existing in the United States (US) at state level, including reference to relevant US case law and legislation. As a possible option to address the problem of base erosion and profit shifting (BEPS), formulary apportionment is gaining increasing acceptance and attention. This book will prove invaluable to taxation authorities, tax practitioners, and scholars in its deeply informed and systematic guidance on good practices and prevention of problematic experiences in establishing and implementing an effective and market-neutral FA system.

Topics surveyed include metric graph theory, lattice polytopes, the combinatorial

#### Tax Transfer Pricing Andrea

Musselli, 2022-09-15T00:00:00+02:00 The book pays attention to the tax treatment of transfer pricing in a single perspective of analysis since the most important principles (the arm's length -ALP- i.e. conditions that independent parties would share, and the sale country) are agreed worldwide. They must be applied in the same way regardless of the economic sector or industry. A country survey overlooks the most important issue of the fiscal problem, that is, the ability to project a unitary policy in compliance with the ALP (or with the sale country principle) and that should be audited by one sole (only theoretically) existing tax authority. The practical part and examples disclose how rules should be/have been applied, how legal proceedings can arise/arose regarding their application, how they were decided if litigation truly occurred, and finally the author's motivated opinion with special focus on which is "the breaking point" of a specific analysis. The term "breaking point" is used to explain which can be the factual and/or the interpretative change that is able to modify such analysis and thus the solution. Extract from the preface of prof. Reuven Avi-Yonah: "this book is a must read for any serious student of the topic and an important contribution to understanding how the

ALP is applied today as well as to how it should be applied. It is an invaluable contribution and should be read widely by both tax lawyers and accountants and by tax policy makers”.
