*The Theory of H(b) Spaces:* Emmanuel Fricain,Javad Mashregghi,2016-10-20 An H(b) space is defined as a collection of analytic functions that are in the image of an operator. The theory of H(b) spaces bridges two classical subjects, complex analysis and operator theory, which makes it both appealing and demanding. Volume 1 of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of H(b) spaces, such as Hardy spaces, Fourier analysis, integral representation theorems, Carleson measures, Toeplitz and Hankel operators, various types of shift operators and Clark measures. Volume 2 focuses on the central theory. Both books are accessible to graduate students as well as researchers: each volume contains numerous exercises and hints, and figures are included throughout to illustrate the theory. Together, these two volumes provide everything the reader needs to understand and appreciate this beautiful branch of mathematics.

**B-58 Hustler Units** Peter E. Davies,2019-10-31 One of the most dramatic bombers of its day, the Convair B-58 came to epitomise the Cold War power of Strategic Air Command. Introduced only 12 years after the sound barrier was first broken, this iconic plane became the first large long-range supersonic bomber to take to the skies, a feat which had seemed far-fetched only a few years previously. Outstripping its contemporaries in terms of speed, and agile enough to escape most interceptors, the B-58 was a remarkable feat of engineering, setting 19 world speed records and collecting a host of trophies. The first operational bomber capable of Mach 2 at 63,000 feet, it was able to evade hostile fighters and represented a serious threat to targets across the Soviet Bloc. Supported by contemporary first-hand accounts, photography, and full-colour illustrations, this study explores the history of this ground-breaking aircraft from its conception to its little-known testing for use in the Vietnam War.

*B-57 Canberra Units of the Vietnam War* T. E. Bell,2013-01-20 The B-57 Canberra was the first jet-powered American attack aircraft committed to the Vietnam War. Involved in day-to-day interdiction missions as well as in classified “black” missions and a starring role in Operation Rolling Thunder; the B-57 evolved to become one of the most valuable weapons in the USAF inventory. The B-57E was involved in the Patricia Lynn missions, parts of which remain classified. This book also fully documents the role of the Australian Canberra B-20 in working alongside the B-57. Featuring scores of previously unpublished photographs; the story of the B-57 is the story of the Vietnam War.

Approximation and Modeling with B-Splines Klaus Hollig,Jorg Horner,2015-07-01 B-splines are fundamental to approximation and data fitting, geometric modeling, automated manufacturing, computer graphics, and numerical simulation. With an emphasis on key results and methods that are most widely used in practice, this textbook provides a unified introduction to the basic components of B-spline theory: approximation methods (mathematics), modeling techniques (engineering), and geometric algorithms (computer science). A supplemental Web site will provide a collection of problems, some with solutions, slides for use in lectures, and programs with demos.

**Production and Comprehension of Utterances (RLE Linguistics B: Grammar)** I.M. Schlesinger,2014-01-10 In this volume, the author reviews the results of research on language performance and proposes a model of production and comprehension. Although recent developments in linguistics are taken into account, consideration of other requirements of a performance model leads to the conclusion that the grammar the speaker has in mind differs from the grammar as currently conceived of by most linguists. The author is also critical of recent computer simulations of language performance on the basis that they fall short of describing what goes on in human production and comprehension. The author therefore proposes that the basic issues must be rethought and new theoretical foundations reformulated, in order to arrive at a viable theory of language functioning. In developing the framework of the model presented in this book, requirements of flexibility in the performance mechanisms, the probabilistic nature of comprehension processes, and the

interleaving of linguistic rules with context and knowledge of the world are emphasized.
