**Computer Processing of Sanskrit Nominal Inflections** Subhash Chandra, Girish Nath Jha, 2011-01-18 Computer Processing of Sanskrit Nominal Inflections: Methods and Implementation is the result of Research and Development (R&D) at the Master of Philosophy (MPhil) level at Jawaharlal Nehru University, New Delhi, India. The title of the dissertation was "Machine Recognition and Morphological Analysis of Subanta-Padas." The work, which is based on the reverse engineering implementation of Panini's Sanskrit Grammar, brings together new and original studies in the area of computational linguistics, language technology and natural language processing with reference to parsing Sanskrit nominal inflections. On the surface level, Panini has defined rules in a forward looking generative fashion which makes reverse analysis necessary for parsing. Since parsing inflections is the first basic step towards complete analysis, the present work has relevance for any larger system that may evolve in future.

**The Paradigm Shift to Multimodality in Contemporary Computer Interfaces** Sharon Oviatt, Philip R. Cohen, 2015-04-01 During the last decade, cell phones with multimodal interfaces based on combined new media have become the dominant computer interface worldwide. Multimodal interfaces support mobility and expand the expressive power of human input to computers. They have shifted the fulcrum of human-computer interaction much closer to the human. This book explains the foundation of human-centered multimodal interaction and interface design, based on the cognitive and neurosciences, as well as the major benefits of multimodal interfaces for human cognition and performance. It describes the data-intensive methodologies used to envision, prototype, and evaluate new multimodal interfaces. From a system development viewpoint, this book outlines major approaches for multimodal signal processing, fusion, architectures, and techniques for robustly interpreting users' meaning. Multimodal interfaces have been commercialized extensively for field and mobile applications during the last decade. Research also is growing rapidly in areas like multimodal data analytics, affect recognition, accessible interfaces, embedded and robotic interfaces, machine learning and new hybrid processing approaches, and similar topics. The expansion of multimodal interfaces is part of the long-term evolution of more expressively powerful input to computers, a trend that will substantially improve support for human cognition and performance.

**The Sanskrit Alphabet** Ashwini Kumar Aggarwal, 2017-05-04 Sanskrit has been revived with the advancement in technology and the incorporation of fonts, keyboard character maps, and Samskrita Bharati. This book gives the complete Alphabet, consisting of Vowels and Consonants, Semivowels, Sibilants and the Aspirate. Special attention is paid to the Vedic letter for da found in the RigVeda, and the Vedic nasals formed by euphonic combination known as Ayogavahas. The Vedic Accents namely Udata, Anudata and Svarita are also explained. Reading of Avagraha, Ayogavaha, Visarga and Anusvara is given in detail. Computer typesetting, Unicodes, Keyboard Character maps and relevant Fonts are mentioned. A useful and complete book for the novice, the amateur or the Scholar.

The Sanskrit Alphabet with Vedic Extensions Ashwini Kumar Aggarwal, 2021-01-15 The Sanskrit Alphabet consists of 56 Letters. There are Vowels, Semivowels, Row Class Consonants, Sibilants and the Aspirate. The Alphabet is called ण्यक्षरम् in Sanskrit. Each letter is clearly enunciated with correct movement of the Tongue. Nasals lend a distinct twang and the Vedic chants are a delight to hear because of Accented Vowels. Reading an Avagraha, Ayogavaha, Visarga and Anusvara is properly explained as all the letters of the Alphabet are laid out threadbare. A section on Unicodes and Typesetting in Devanagari with fonts and keyboard IME supporting Vedic Extensions adds relevant value. While reading Vedic Texts, we notice some letters, characters and symbols that are in addition to the standard Sanskrit Alphabet. These characters are the accent marks, sandhi symbols, additional letters and punctuation, that are found in Vedic Sanskrit. There are various samhita recensions of the Veda manuscripts available today, and they differ in the usage of accents and symbols, and also in the enunciation while chanting aloud. Each ashram and gurukul and pundit or scholar needs to be aware of the tone and pitch during recitation and chanting of the Vedas. Even university professors and researchers delving into the Vedas need to be aware of the correct meaning and application of these verses. Furthermore, as we move from offset printing and metal type setting to the computer and smartphone era, this book serves as an invaluable resource. This book builds upon our popular title The Sanskrit Alphabet. Infused with manuscript passages from the Satapatha Brahmana, Vajasaneyi Madhyandina Samhita, Samaveda and Krishna Yajurveda to illustrate Vedic Symbols. A useful and complete book for the novice, the amateur or the Scholar.
