DNA barcoding: a practical tool for fundamental and applied biodiversity research Zoltan T Nagy,Thierry Backeljau,Marc De Meyer,Kurt Jordaens,2013-12-30 DNA barcoding has become a well-accepted and popular tool for the identification of species and the detection of cryptic taxonomic diversity. As such, it has a tremendous potential for a wide variety of applications in taxonomy, agronomy, conservation biology, forensics etc. Therefore, several countries, institutions and organizations have launched DNA barcoding projects in the context of the international ?Consortium for the Barcode of Life? (CBOL) initiative. Also Belgium has done so with the establishment of the FWO research community ?Belgian Network for DNA barcoding?. In 2012, this network organized the ?Third European Conference for the Barcode of Life? (ECBOL3) in Brussels. During this event a call was made to publish a collection of papers under the thematic title ?DNA barcoding: a practical tool for fundamental and applied biodiversity research?. With the financial support of the EC project ?ViBRANT? (Virtual Biodiversity Research and Access Network for Taxonomy), 21 papers were bundled to form this special ?ZooKeys? issue with the aim to present various applications, advantages and limitations of DNA barcoding. Hence, it is the editors? hope that this issue provides a modest, but timely, contribution to the already vast literature on DNA barcoding.

DNA Barcoding and Molecular Phylogeny Subrata Trivedi,Hasibur Rehman,Shalini Saggu,Chellasamy Panneerselvam,Sankar K. Ghosh,2020-08-24 This book presents a comprehensive overview of DNA barcoding and molecular phylogeny, along with a number of case studies. It discusses a number of areas where DNA barcoding can be applied, such as clinical microbiology, especially in relation to infection management; DNA database management; and plant -animal interactions, and also presents valuable information on the DNA barcoding and molecular phylogeny of microbes, algae, elasmobranchs, fishes, birds and ruminant mammals. Furthermore it features unique case studies describing DNA barcoding of reptiles dwelling in Saudi Arabian deserts, genetic variation studies in both wild and hatchery populations of *Anabas testudineus*, DNA barcoding and molecular phylogeny of Ichthyoplankton and juvenile fishes of Kuantan River in Malaysia, and barcoding and molecular phylogenetic analysis of indigenous bacteria from fishes dwelling in a tropical tidal river. Moreover, since prompt

identification and management of invasive species is vital to prevent economic and ecological loss, the book includes a chapter on DNA barcoding of invasive species. Given its scope, this book will appeal not only to researchers, teachers and students around the globe, but also to general readers.

Barcoding Nature Claire Waterton, 2017-07-05 DNA

Barcoding has been promoted since 2003 as a new, fast, digital genomics-based means of identifying natural species based on the idea that a small standard fragment of any organisms genome (a so-called micro-genome) can faithfully identify and help to classify every species on the planet. The fear that species are becoming extinct before they have ever been known fuels barcoders, and the speed, scope, economy and user-friendliness claimed for DNA barcoding, as part of the larger ferment around the genomics revolution, has also encouraged promises that it could inspire humanity to reverse its biodiversity-destructive habits. This book is based on six years of ethnographic research on changing practices in the identification and classification of natural species. Informed both by Science and Technology Studies (STS) and the anthropology of science, the authors analyse DNA barcoding in the context of a sense of crisis concerning global biodiversity loss, but also the felt inadequacy of taxonomic science to address such loss. The authors chart the specific changes that this innovation is propelling in the collecting, organizing, analyzing, and archiving of biological specimens and biodiversity data. As they do so they highlight the many questions, ambiguities and contradictions that accompany the quest to create a genomics-based environmental technoscience dedicated to biodiversity protection. They ask what it might mean to recognise ambiguity, contradiction, and excess more publicly as a constitutive part of this and other genomic technosciences. *Barcoding Nature* will be of interest to students and scholars of sociology of science, science and technology studies, politics of the environment, genomics and post-genomics, philosophy and history of biology, and the anthropology of science.

DNA Barcoding in Marine Perspectives Subrata

Trivedi, Abid Ali Ansari, Sankar K. Ghosh, Hasibur

Rehman, 2016-08-31 More than two third of the surface area of our planet is covered by oceans and assessment of the marine biodiversity is a challenging task. With the increasing global population, there is a tendency to exploit marine resources for food, energy and other requirements. This puts pressure on the fragile marine environment and needs sustainable conservation efforts. Marine species identification using traditional taxonomical methods are often burdened with taxonomic controversies. Here in this book we will discuss the comparatively new concept of DNA barcoding and its significance in marine perspective. This molecular technique can be helpful in the assessment of cryptic species which are widespread in marine environment, and can also be used to link the different life cycle stages to the adult which is difficult to accomplish in marine ecosystems. Other advantages of DNA barcoding include authentication and safety assessment of seafood, wildlife forensics, conservation genetics and detection of invasive alien species (IAS). Global DNA barcoding efforts in the marine habitat include MarBOL, CeDAMar, CMarZ, SHARK-BOL, etc. DNA barcoding of different marine groups ranging from the microbes to mammals is to be revealed. In conjugation with newer and faster techniques like high throughput sequencing, DNA barcoding is serving as an effective modern tool in marine biodiversity assessment and conservation.

DNA Barcoding Robert Desalle, 2024-01-06 This volume covers the latest advancements and methods used to study DNA barcoding. The chapters in this book are organized into six parts: theory, DNA manipulation, specialized barcoding methods, analysis of DNA barcodes, completing a successful DNA barcode project, and barcoding as citizen science. Part One looks at several theoretical issues in DNA barcoding concerned with DNA barcodes that can and should be used. Part Two discusses protocols for processing samples into DNA barcodes, including DNA isolation,

sequencing and managing samples, and the resulting DNA barcodes. Part Three explores the next generation of DNA barcoding such as FRET-based detection, dual nanopore detection, skimming, and closed-tube methods. Part Four addresses programs and websites that handle DNA barcoding data, and includes character-based approaches, barcode gap methods, integrated approaches, and Barcode of Life Database. Part Five offers protocols for producing a successful DNA barcoding project including plant and animal examples and protocols for generating a DNA Barcode Reference Library. Lastly, Part Six talks about several novel protocols for setting up an educational program using DNA barcodes. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and thorough, DNA Barcoding: Methods and Protocols encompasses a wide range of techniques and will be a useful reference tool for both scientist and student.

DNA barcoding and biochemical profiling of medical plants of northern and desert areas of Pakistan to improve rural living standard Jamil, Amer, Ashfaq,

Muhammad, 2016-02-19 Pakistan is a country with a varied climate and hosts a large number of medicinal plant species. Most of the medicinal plants are collected in the wild by local communities. These plants are an important source of livelihood for rural economies. However, no systematic documentation has been undertaken to assist in proving ownership of the plant resources. This project focused on the conservation of natural plant resources by using modern molecular techniques and creating awareness for determining the active ingredients of the plants through biochemical profiling. Further objectives of the study were to identify marketing channels for medicinal plants, costs and margins of stakeholders involved in the marketing of medicinal

plants, and factors responsible for the poor trade and decreasing population of these plants in the two study areas of Swat Valley and Cholistan Desert.

DNA Barcodes Ida Lopez, David L. Erickson, 2012-06-12 A DNA barcode in its simplest definition is one or more short gene sequences taken from a standardized portion of the genome that is used to identify species through reference to DNA sequence libraries or databases. In *DNA Barcodes: Methods and Protocols* expert researchers in the field detail many of the methods which are now commonly used with DNA barcodes. These methods include the latest information on techniques for generating, applying, and analyzing DNA barcodes across the Tree of Life including animals, fungi, protists, algae, and plants. Written in the highly successful *Methods in Molecular Biology*TM series format, the chapters include the kind of detailed description and implementation advice that is crucial for getting optimal results in the laboratory. Thorough and intuitive, *DNA Barcodes: Methods and Protocols* aids scientists in continuing to study methods from wet-lab protocols, statistical, and ecological analyses along with guides to future, large-scale collections campaigns.

The Secret Life of Bar Codes John Berry, 2013-04-29 This book celebrates the 40th anniversary of the bar code and is written for those who over the years have asked the author what these bar codes are all about. It deals with why they were invented, who created them, how they are managed and used, whether they have been 'a good thing', how much longer they will last and what may replace them. It tells you how you can 'read between the lines' and 'what's in a number'. But it is not a detailed technical or historical account. It is an entertaining account full of stories and personalities designed to show that the term 'interesting bar codes' is not an oxymoron.

Plant DNA Fingerprinting and Barcoding Nikolaus J. Sucher, James R. Hennell, Maria C. Carles, 2012-03-15 Molecular cloning and DNA-based analysis have become part of every molecular life science laboratory. The rapid adoption of DNA-based

techniques has been facilitated by the introduction of the polymerase chain reaction (PCR), which has made cloning and characterization of DNA quick and relatively simple. PCR is virtually part of every variation of the plethora of approaches used for DNA fingerprinting today. *Plant DNA Fingerprinting: Methods and Protocols* aims to bring together the different currently available genome-based techniques into one repository. This volume contains detailed protocols for the preparation of plant genomic DNA, fingerprinting of plants for the detection of intra-species variations, the use of DNA barcoding, as well as methods for the bioinformatic analysis of data. Also included are several discussions on the broader issues of genome-based approaches in order to provide a sound understanding of the principles of these methods. Written in the successful *Methods in Molecular Biology*TM series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, *Plant DNA Fingerprinting: Methods and Protocols* is tailored principally for those who seek to augment their current methods of plant analysis and quality control using genome-based approaches as well as for scientists and researchers in different plant sciences.

Biological Oceanography of the Baltic Sea Pauline

Snøeijls-Leijonmalm, Hendrik Schubert, Teresa

Radziejewska, 2017-04-04 This is the first comprehensive science-based textbook on the biology and ecology of the Baltic Sea, one of the world's largest brackish water bodies. The aim of this book is to provide students and other readers with knowledge about the conditions for life in brackish water, the functioning of the Baltic Sea ecosystem and its environmental problems and management. It highlights biological variation along the unique environmental gradients of the brackish Baltic Sea Area (the Baltic Sea, Belt Sea and Kattegat), especially those in salinity and climate. The first part of the book presents the challenges for life processes and ecosystem dynamics that result from the Baltic Sea's highly variable recent geological history and geographical isolation. The second part explains interactions between organisms and their environment, including biogeochemical cycles, patterns of biodiversity, genetic diversity and evolution, biological invasions and physiological adaptations. In the third part, the subsystems of the Baltic Sea ecosystem – the pelagic zone, the sea ice, the deep soft sea beds, the phytobenthic zone, the sandy coasts, and estuaries and coastal lagoons – are treated in detail with respect to the structure and function of communities and habitats and consequences of natural and anthropogenic constraints, such as climate change, discharges of nutrients and hazardous substances. Finally, the fourth part of the book discusses monitoring and ecosystem-based management to deal with contemporary and emerging threats to the ecosystem's health.

Identification of Species Specific DNA Marker as Barcode Sequence from Greater Indian One-Horned Rhinoceros (Rhinoceros Unicornis) from North East India Tarikul Mazumder, 2014-08-12
Master's Thesis from the year 2014 in the subject Biology - Geobiology, Assam University, language: English, abstract: The North East India is a reservoir of rich biodiversity for much of India's flora and fauna, and as a consequence, the region is one of the richest in biological values. DNA based species identification or DNA barcoding is an exciting tool for documenting biodiversity

with a gene sequence. Here we focused on the development of DNA barcode sequence of Greater Indian one-horned Rhinoceros [*Rhinoceros unicornis*] by determining the DNA sequence of its mitochondrial 5 COI gene region using cross primer design for PCR amplification. The cross species primer pairs of forward primer fish [FISH COX F] and reverse primer invertebrate [INV R] DNA barcoding, successfully amplified the barcode sequence of *R. unicornis* which is confirmed through similarity search in National Centre for Biotechnology [NCBI, www.ncbi.nlm.nih.gov] and Barcode of life [BOLD] database and submitted to NCBI-GenBank with accession no. JN417004 is the first COI barcode sequence of *R. unicornis* of Greater Indian one-horned Rhino. We observed the maximum identification of the query sequence in case of *R. unicornis* (99%) and *R. sondaicus* (93%). Mean pair wise distance was computed using K2P to check the inter species divergence between all species in each genus among the members of Rhinocerotidae family in COI region taking 632 bp into consideration, within species was found to be 0.002 as the maximum and 0.000 as the minimum and that of in between species was found to be 0.064 as the maximum and 0.000 as the minimum. The study represents development of COI species specific DNA barcode of *R. unicornis* with regard to conservation and trade aspect. The cross species primer pair to amplify barcode gene for a species for which no specific primer are available represents a noble approach for barcoding on those areas like North East India where biological diversity is high.
