Here to help guide you, Acrobat expert Donna Baker presents real-life scenarios that you can apply to any situation in which document control and management is an issue. With practical advice, productivity tips, and step-by-step directions for using the latest Acrobat features, *Acrobat 8 in the Office* will help you understand the broad capabilities of this "what-can't-it-do?" software. Among other useful features, this book also • Shows you how to use Acrobat in real-life situations to improve productivity, cost savings, and communication. • Covers the new features in Acrobat 8, including shared reviewing, Acrobat Connect (an online meeting room), auto-recognition form fields, new merging and document optimizing tools, redaction tools. • Describes how to best combine new and existing Acrobat tools to accomplish nearly any office communication task. • Includes a companion Web site at www.donnabaker.ca/downloads.html that contains source files for examples in the book, plus bonus projects and case study chapters.

Computing and Investigations for Everyone Eamon Doherty, G. Don Purdy, Joel & Todd Liesbesfeld, 2008-09 This *Everyone* book attempts to guide the reader through the more essential steps of understanding the basic principles or elements that constitute the daily work of investigators in fields relating to computing and electrical loss. The chapter's are meant to set a foundation for people who may want to enter the field of investigations, or are at the beginning of a career in the area, or are seasoned investigators looking to delve into more contemporary areas of investigations, or for persons that are just interested in reading about matters or topics that are currently revealed in differing forms of media, such as in the successful TV drama series CSI. The book is formatted sequentially so that the reader can review important legal matters that are a part of most investigations and then go on to peruse the elements of basic electrical principles as they apply to certain types of fire and fault losses. These beginning chapters set a broad stage for the various areas of computing that follow. The book does not necessarily have to be read in the order that it was written. In a sense, the reader may choose to use the book as a reference book. The chapters were written, for the most part, to be able to stand alone, as monographs. There are many chapters that review a broad range of more common topics and there are chapters concerned with more esoteric areas of computing and electronics. Some of these chapters discuss the high-tech methods that are sometimes deployed by thieves, terrorists, pedophiles, stalkers, etc. All of the co-authors reflect their experience as individuals that work closely with the criminal justice and civil institutions.
