Countdown Alan Weisman,2013-09-24 Every four days there are a million more people on the planet. More people and fewer resources. In this timely work, Alan Weisman examines how we can shrink our collective human footprint so that we don't stomp any more species - including our own - out of existence. The answer: reducing gradually and non-violently the number of humans on the planet whose activities, industries and lifestyles are damaging the Earth. Defining an optimum human population for the Earth is an explosive concept. Weisman, one of the most brilliant environmental writers, will travel the globe, from the settlements of Israel and the plains of Mexico to the bustling streets of Pakistan and the teeming cities of the UK. In his search for answers, he will speak to religious leaders, demographers, ecologists, economists, engineers and agriculturalists in what promises to be an international classic.

Nodes in Transport Networks – Research, Data Analysis and Modelling Elżbieta Macioszek,Nan Kang,Grzegorz Sierpiński,2020-01-06 The publication delivers numerous valuable guidelines, particularly useful when making decisions related in the subject matter to road and rail nodes located in dense transport networks. The know-how displayed while discussing practical examples as well as the decision making support systems described in the publication will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems. This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport-related issues (in both urban and regional areas) as well as to representatives of business and industry, being those who participate directly in the implementation of traffic engineering solutions. The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies (including those related to synchronisation of road traffic streams, improving the capacity, road traffic safety analysis, evaluation of changes in drivers' behaviour on account of introducing countdown timers at signal-controlled intersections using UAV data, the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings). On the other hand, since the publication also concerns the new approach to theoretical models (including potential places of integration of public transport with the railway network or the speed adviser for pedestrians enabling them to choose the optimal path at signal-controlled intersections), it should also attract the attention of researches and scientists studying this body of problems. The publication entitled Nodes in transport networks - research, data analysis and modelling contains selected papers submitted to and presented at the 16th "Transport Systems. Theory and Practice" Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16-18 September 2019 in Katowice (Poland).

Cognitive Models of Psychological Time Richard A. Block,2014-01-14 This volume critically reviews cognitive models of psychological time in order to clarify and enrich what is known about the temporal aspects of cognitive processes. Concentrating on how adult humans experience, remember, and construct time, chapters survey recent work on such topics as mental representations of time, timing in movement sequences, time and timing in music, and the processing of temporal information. Also included are chapters with a broader perspective, such as the impacts of methodological choices, chronobiology and temporal experience, a comparative approach to time and order, and normal and abnormal temporal perspectives. The book makes current research and theories on the psychology of time more accessible to researchers in cognitive psychology.
