Adaptive Hypertext and Hypermedia Peter Brusilovsky, Alfred Kobsa, Julita Vassileva, 2013-04-17 Hypertext/hypermedia systems and user-model-based adaptive systems in the areas of learning and information retrieval have for a long time been considered as two mutually exclusive approaches to information access. Adaptive systems tailor information to the user and may guide the user in the information space to present the most relevant material, taking into account a model of the user's goals, interests and preferences. Hypermedia systems, on the other hand, are 'user neutral': they provide the user with the tools and the freedom to explore an information space by browsing through a complex network of information nodes. Adaptive hypertext and hypermedia systems attempt to bridge the gap between these two approaches. Adaptation of hypermedia systems to each individual user is increasingly needed. With the growing size, complexity and heterogeneity of current hypermedia systems, such as the World Wide Web, it becomes virtually impossible to impose guidelines on authors concerning the overall organization of hypermedia information. The networks therefore become so complex and unstructured that the existing navigational tools are no longer powerful enough to provide orientation on where to search for the needed information. It is also not possible to identify appropriate pre-defined paths or subnets for users with certain goals and knowledge backgrounds since the user community of hypermedia systems is usually quite inhomogeneous. This is particularly true for Web-based applications which are expected to be used by a much greater variety of users than any earlier standalone application. A possible remedy for the negative effects of the traditional 'one-size-fits-all' approach in the development of hypermedia systems is to equip them with the ability to adapt to the needs of their individual users. A possible way of achieving adaptivity is by modeling the users and tailoring the system's interactions to their goals, tasks and interests. In this sense, the notion of adaptive hypertext/hypermedia comes naturally to denote a hypertext or hypermedia system which reflects some features of the user and/or characteristics of his system usage in a user model, and utilizes this model in order to adapt various behavioral aspects of the system to the user. This book is the first comprehensive publication on adaptive hypertext and hypermedia. It is oriented towards researchers and practitioners in the fields of hypertext and hypermedia, information systems, and personalized systems. It is also an important resource for the numerous developers of Web-based applications. The design decisions, adaptation methods, and experience presented in this book are a unique source of ideas and techniques for developing more usable and more intelligent Web-based systems suitable for a great variety of users. The practitioners will find it important that many of the adaptation techniques presented in this book have proved to be efficient and are ready to be used in various applications.

Creating Value Laura R. Oswald, Laura Oswald, 2015 To leverage the power of brand meaning or semiotics, management needs a research approach that taps into consumers' experiences, cultural perspectives, and emotional intelligence. This book presents such an approach by decoding the cultural myths, social networks and deep experiences consumers associate with marketing signs, spaces and rituals.

EBOOK: Learning Spaces: Creating Opportunities for Knowledge Creation in Academic Life Maggi Savin-Baden, 2007-11-16 "This is a timely and important book which seeks to reclaim universities as places of learning. It is jargon free and forcefully argued. It should be on every principal and vice-chancellor's list of essential reading." Jon Nixon, Professor of Educational Studies, University of Sheffield The ability to have or to find space in academic life seems to be increasingly difficult since we seem to be consumed by teaching and bidding, overwhelmed by emails and underwhelmed by long arduous meetings. This book explores the concept of learning spaces, the idea that there are diverse forms of spaces within the life and life world of the academic where opportunities to reflect and critique their own unique learning position occur. Learning Spaces sets out to challenge the notion that academic thinking can take place in cramped, busy working spaces, and argues instead for a need to recognise and promote new opportunities for learning spaces to emerge in academic life. The book examines the ideas that: Learning spaces are increasingly absent in academic life The creation and re-creation of learning spaces is vital for the survival of the academic community The absence of learning spaces is resulting in increasing dissolution and fragmentation of academic identities Learning spaces need to be valued and possibly redefined in order to regain and maintain the intellectual health of academe In offering possibilities for creative learning spaces, this innovative book provides key reading for those interested in the future of universities including educational developers, researchers, managers and policy makers.

Adobe FrameMaker 11 Classroom in a Book Adobe Creative Team, 2013-01-03 FrameMaker, which is at the core of the Adobe Technical Communication Suite, has long been the gold standard for writing, illustrating, and laying out technical documentation in print. With new features like support for rich media objects and powerful PDF export, FrameMaker excels at authoring online documents as well. This Classroom in a Book begins with a survey of the fundamentals of FrameMaker 11: setting up master pages, styling paragraphs, defining colors, placing graphics, creating tables, adding captions, cross-references, footnotes, and hyperlinks. Later chapters cover long-document features, such as tables of contents and indexes. Creating conditional text documents and preparing content for output to print or to screen (PDF or HTML) round out the coverage.

Understanding and Creating Digital Texts Richard Beach, Professor Emeritus of English Education, University of Minnesota, Chris M. Anson, North Carolina State University, Lee-Ann Kastman Breuch, Thomas Reynolds, 2014-10-16 This book provides activities and examples that use technological tools to help students learn how to create digital texts. This book also provides a basis for creating novel classroom activities that encourage students to define purpose and audience, make textual links, collaborate, gain new perspectives, and construct identities through writing. ies.

Essential Mathcad for Engineering, Science, and Math w/ CD Brent Maxfield, 2009-05-22 Essential Mathcad for Engineering, Science, and Math w/ CD, Second Edition, introduces the most powerful functions and features of the software and teaches their application to create comprehensive calculations for any quantitative subject. Examples from a variety of fields demonstrate the power and utility of Mathcad's tools, while also demonstrating how other software, such as Excel spreadsheets, can be incorporated effectively. A companion CD-ROM contains a full non-expiring version of Mathcad (North America only). This new edition features a new chapter that introduces the basics of Mathcad to allow the reader to begin using the program early; applied examples and problems from a wide variety of disciplines; and more thorough discussions of commonly used engineering tools – differential equations, 3D plotting, and curve fitting. Its simple, step-by-step approach makes this book an ideal text for professional engineers as well as engineering, science, and math students. *Many more applied examples and exercises from a wide variety of engineering, science, and math fields* New: more thorough discussions of differential equations, 3D plotting, and curve fitting.* Full non-expiring version of Mathcad software included on CD-ROM (North America only)* A step-by-step approach enables easy learning for professionals and students alike

Geographies of the Internet Barney Warf, 2020-07-27 This book offers a comprehensive overview of recent research on the internet, emphasizing its spatial dimensions, geospatial applications, and the numerous social and geographic implications such as the digital divide and the mobile internet. Written by leading scholars in the field, the book sheds light on the origins and the multiple facets of the internet. It addresses the various definitions of cyberspace and the rise of the World Wide Web, draws upon media theory, as well as explores the physical infrastructure such as the global skein of fibre optics networks and broadband connectivity. Several economic dimensions, such as e-commerce, e-tailing, e-finance, e-government, and e-tourism, are also explored. Apart from its most common uses such as Google Earth, social media like Twitter, and neogeography, this volume also presents the internet's novel uses for ethnographic research and the study of digital diasporas. Illustrated with numerous graphics, maps, and charts, the book will best serve as supplementary reading for academics, students, researchers, and as a professional handbook for policy makers involved in communications, media, retailing, and economic development.

Networks Steven T. Karris, 2002 This text begins with the basic components of telephone and computer networks. Next, the Local Area Networks (LANs), Metropolitan Area Networks (MANs), Wide Area Networks (WANs), the OSI Management Model, the network devices that operate at different layers of the OSI model, and the IEEE 802 Standards are discussed. Several protocols and the physical topologies, bus, star, and ring are presented. The Ethernet, Token Ring, and Fiber Distributed Data Interface (FDDI) are described in detail. Concludes with an introduction to SNMP and RAMON.

Canonizing Hypertext Astrid Ensslin, 2007-07-09 This innovative monograph focuses on a contemporary form of computer-based literature called 'literary hypertext', a digital, interactive, communicative form of new media writing. Canonizing Hypertext combines theoretical and hermeneutic investigations with empirical research into the motivational and pedagogic possibilities of this form of literature. It focuses on key questions for literary scholars and teachers: How can literature be taught in such a way as to make it relevant for an increasingly hypermedia-oriented readership? How can the rapidly evolving new media be integrated into curricula that still seek to transmit 'traditional' literary competence? How can the notion of literary competence be broadened to take into account these current trends? This study, which argues for hypertext's integration in the literary canon, offers a critical overview of developments in hypertext theory, an exemplary hypertext canon and an evaluation of possible classroom applications.
