Stephen D. Richardson

Empirical modelling of translation and interpreting Hansen-Schirra, Silvia, Czulo, Oliver, Hofmann, Sascha, Empirical research is carried out in a cyclic way: approaching a research area bottom-up, data lead to interpretations and ideally to the abstraction of laws, on the basis of which a theory can be derived. Deductive research is based on a theory, on the basis of which hypotheses can be formulated and tested against the background of empirical data. Looking at the state-of-the-art in translation studies, either theories as well as models are designed or empirical data are collected and interpreted. However, the final step is still lacking: so far, empirical data has not lead to the formulation of theories or models, whereas existing theories and models have not yet been comprehensively tested with empirical methods. This publication addresses these issues from several perspectives: multi-method product- as well as process-based research may gain insights into translation as well as interpreting phenomena. These phenomena may include cognitive and organizational processes, procedures and strategies, competence and performance, translation properties and universals, etc. Empirical findings about the deeper structures of translation and interpreting will reduce the gap between translation and interpreting practice and model and theory building. Furthermore, the availability of more large-scale empirical testing triggers the development of models and theories concerning translation and interpreting phenomena and

behavior based on quantifiable, replicable and transparent data.

Machine Translation: From Research to Real Users Stephen D. Richardson, 2003-06-30 AMTA 2002: From Research to Real Users Ever since the showdown between Empiricists and Rationalists a decade ago at TMI 92, MT researchers have hotly pursued promising paradigms for MT, including data-driven approaches (e.g., statistical, example-based) and hybrids that integrate these with more traditional rule-based components. During the same period, commercial MT systems with standard transfer architectures have evolved along a parallel and almost unrelated track, increasing their coverage (primarily through manual update of their lexicons, we assume) and achieving much broader acceptance and usage, principally through the medium

of the Internet. Webpage translators have become commonplace; a number of online translation services have appeared, including in their offerings both raw and postedited MT; and large corporations have been turning increasingly to MT to address the exigencies of global communication. Still, the output of the transfer-based systems employed in this expansion represents but a small drop in the ever-growing translation marketplace bucket.

The Routledge Course on Media, Legal and Technical Translation Mahmoud Altarabin, 2020-10-26 The Routledge Course on Media, Legal and Technical Translation: English-Arabic-English is an indispensable and engaging coursebook for university students wishing to develop their English-Arabic-English translation skills in these three text types. Taking a practical approach, the book introduces Arab translation students to common translation strategies in addition to the linguistic, syntactic, and stylistic features of media, legal, and technical texts. This book features texts carefully selected for their technical relevance. The key features include: • comprehensive four chapters covering media, legal, and technical texts, which are of immense importance to Arab translation students; • detailed and clear explanations of the lexical, syntactic, and stylistic features of English and Arabic media, legal, and technical texts; • up-to-date and practical translation examples in both directions offering students actual experiences of professional translators; • authentic texts extracted from various sources to promote students' familiarity with language features and use; • extensive range of exercises following each section of the book to enable students to test and practice the knowledge and skills they developed from reading

previous sections; • glossaries following most exercises containing the translation of difficult words; and • a list of recommended readings following each chapter. The easy, practical, and comprehensive approach adopted in the book makes it a must-have coursebook for intermediate and advanced students studying translation between English and Arabic. University instructors and professional translators working on translation between English and Arabic will find this book particularly useful.

Triangulating Translation Fabio Alves, 2003-11-24 This book contains a selection of papers presented in a subsection on translation process analysis at the II Brazilian International Translators' Forum, held on 23-27 July 2001. The volume builds on the notion of triangulation, i.e., the combined use of different methods of data elicitation and analyses, to discuss methodological issues and actual experimental methods in the field of translation process research. Grouped in three parts, the seven contributions raise issues concerned, among others, with the translation-pragmatics interface, the role of inter-subjectivity, the attempts at modeling what accounts for translation competence, and the effect of think-aloud on translation speed, revision, and segmentation. The volume also examines the process of translation in terms of relevant measurements which can validate some of the instruments used in the triangulation approach and fosters the application of triangulation as a pedagogical instrument to be applied to translators' training. The book will certainly find an audience among

translation scholars doing experimental work and students and practitioners interested in capturing the translation process.

Virtual Reality for Physical and Motor Rehabilitation Patrice L. (Tamar) Weiss, Emily A. Keshner, Mindy F. Levin, 2014-07-24 While virtual reality (VR) has influenced fields as varied as gaming, archaeology and the visual arts, some of its most promising applications come from the health sector. Particularly encouraging are the many uses of VR in supporting the recovery of motor skills following accident or illness. *Virtual Reality for Physical and Motor Rehabilitation* reviews two decades of progress and anticipates advances to come. It offers current research on the capacity of VR to evaluate, address, and reduce motor skill limitations and the use of VR to support motor and sensorimotor function, from the most basic to the most sophisticated skill levels. Expert scientists and clinicians explain how the brain organizes motor behavior, relate therapeutic objectives to client goals and differentiate among VR platforms in engaging the production of movement and balance. On the practical side, contributors demonstrate that VR complements existing therapies across various conditions such as neurodegenerative diseases, traumatic brain injury and stroke. Included among the topics: Neuroplasticity and virtual reality. Vision and perception in

virtual reality. Sensorimotor recalibration in virtual environments. Rehabilitative applications using VR for residual impairments following stroke. VR reveals mechanisms of balance and locomotor impairments. Applications of VR technologies for childhood disabilities. A resource of great immediate and future utility, Virtual Reality for Physical and Motor Rehabilitation distills a dynamic field to aid the work of neuropsychologists, rehabilitation specialists (including physical, speech, vocational and occupational therapists), and neurologists.

Mobile Human-Computer Interaction - Mobile HCI 2004 Stephen Brewster, Mark Dunlop, 2004-09-01 MobileHCI is a forum for academics and practitioners to discuss the challenges and potential solutions for effective human-computer interaction with mobile systems and services. It covers the design, evaluation and application of techniques and approaches for all mobile computing devices and services. MobileHCI 2004 was the sixth in the series of conferences that was started at Glasgow University in 1998 by Chris Johnson. We previously chaired the conference in 1999 in Edinburgh (as part of INTERACT 1999) and in 2001 in Lille (as part of IHM-HCI 2001). The last two years saw the conference move to Italy, first under the chairmanship of Fabio Paternò in Pisa then under Luca Chittaro in Udine. In 2005 the conference will move to Austria to be chaired by Manfred Tscheligi. Each year the conference has its own website hosted by the conference chair, however the address www.mobilehci.org will always point to the next (or current) conference. The number of submissions has increased every year. This year we received 79 full papers (63 were received last year) from which we accepted the best 25. We had 81 short papers and posters submitted (59 last year) and accepted 20 of these as short papers and 22 as posters. We received 9 workshop, 4 tutorial and 2 panel proposals, from which 5, 2 and 2,

respectively, were accepted.
