**DBASE - From the Dot Prompt** Warren M. Littlefield,1993-06-04 This is an introduction to systems programming using dBASE IV as a first programming language. The author uses dBASE IV (version 1.1 or 1.5) because it is the easiest language to learn initially, and applications can be up and running more easily and quickly. This textbook is very easy to use. The results of commands are shown on monitor screens illustrated in the text. Page two begins the creation of a data base with immediate interaction with the computer. Students know exactly what they are doing because of the clear and concise explanations and because they have a view of their screens in the text. If the student's screen does not match, he or she can just backtrack. Little backtracking will be necessary because the language is so exact. The text is self-teaching.

**Geographic Information Systems in Fisheries Management and Planning** Gertjan de Graaf,2003 Many fishery biologists and policy makers involved in inland fisheries management and planning are unaware of GIS technology and its potential for fisheries planning and management. The FAO Inland Water Resources and Aquaculture Service (FIRI) has been active for the last 19 years in promoting the use of GIS and remote sensing in fisheries and aquaculture. Promotional activities have been carried out through training, projects, field missions, and oral presentations and publications. However, a manual to use along with GIS software for the fisheries biologists in the field explaining GIS in a way that is understandable to non-GIS users had not been produced until now. This manual was written to overcome this knowledge-gap, it is a do-it-yourself manual giving a short introduction to GIS software and its applications in fishery science. The overall objective of this manual is to encourage fishery managers to use this tool (GIS) to foster the sustainable use of natural resources. There are five main sections in the manual: GIS concepts and functions and key tools provided by ArcView 3.x, Geographic coordinate system and map projections, Raster data and analysis, Regression analysis, and Application case studies. All sections are accompanied by exercises that have been designed to illustrate key applications of GIS in inland and marine fisheries management. Also, a custom-designed ArcView grid regression extension is included to show the integration of GIS with surplus production models.

**African Water Resource Database: Technical manual and workbook. Technical manual** Jeff Jenness,2007 The African Water Resource Database (AWRD) is a set of data and custom-designed tools, combined in a geographic information system (GIS) analytical framework, aimed at facilitating responsible inland aquatic

resource management with a focus on inland fisheries and aquaculture. It thus provides a valuable instrument to promote food security. The AWRD data archive includes an extensive collection of datasets covering the African continent, including: surface waterbodies, watersheds, aquatic species, rivers, political boundaries, population density, soils, satellite imagery and many other physiographic and climatological data. This technical paper is the second of two publications about the AWRD, and it includes a technical manual for spatial analysts and a workbook for university students and teachers. The first part of this technical paper is available separately (ISBN 9789251057407).
