Cross-platform Desktop Application Development:

Electron, Node, NW.js, and React Dmitry
Sheiko,2017-07-27 Build powerful cross-platform
desktop applications with web technologies such as
Node, NW.JS, Electron, and React About This Book
Build different cross-platform HTML5 desktop
applications right from planning, designing, and
deployment to enhancement, testing, and delivery
Forget the pain of cross-platform compatibility
and build efficient apps that can be easily
deployed on different platforms. Build simple to
advanced HTML5 desktop apps, by integrating them
with other popular frameworks and libraries such
as Electron, Node.JS, Nw.js, React, Redux, and
TypeScript Who This Book Is For This book has been
written for developers interested in creating
desktop applications with HTML5. The first part
requires essential web-master skills (HTML, CSS,
and JavaScript). The second demands minimal
experience with React. And finally for the third
it would be helpful to have a basic knowledge of
React, Redux, and TypeScript. What You Will Learn
Plan, design, and develop different cross-platform
desktop apps Application architecture with React
and local state Application architecture with
React and Redux store Code design with TypeScript
interfaces and specialized types CSS and component
libraries such as Photonkit, Material UI, and
React MDL HTML5 APIs such as desktop
notifications, WebSockets, WebRTC, and others
Desktop environment integration APIs of NW.js and
Electron Package and distribute for NW.JS and
Electron In Detail Building and maintaining cross-
platform desktop applications with native
languages isn't a trivial task. Since it's hard to
simulate on a foreign platform, packaging and
distribution can be quite platform-specific and
testing cross-platform apps is pretty
complicated.In such scenarios, web technologies
such as HTML5 and JavaScript can be your
lifesaver. HTML5 desktop applications can be

distributed across different platforms (Window, MacOS, and Linux) without any modifications to the code. The book starts with a walk-through on building a simple file explorer from scratch powered by NW.JS. So you will practice the most exciting features of bleeding edge CSS and JavaScript. In addition you will learn to use the desktop environment integration API, source code protection, packaging, and auto-updating with NW.JS. As the second application you will build a chat-system example implemented with Electron and React. While developing the chat app, you will get Photonkit. Next, you will create a screen capturer with NW.JS, React, and Redux. Finally, you will examine an RSS-reader built with TypeScript, React, Redux, and Electron. Generic UI components will be reused from the React MDL library. By the end of the book, you will have built four desktop apps. You will have covered everything from planning, designing, and development to the enhancement, testing, and delivery of these apps. Style and approach Filled with real world examples, this book teaches you to build cross-platform desktop apps right from scratch using a step-by-step approach.

  Fab Neil Gershenfeld,2011-02 What if you could someday put the manufacturing power of an automobile plant on your desktop? According to Neil Gershenfeld, the renowned MIT scientist and inventor, the next big thing is personal fabrication-the ability to design and produce your own products, in your own home, with a machine that combines consumer electronics and industrial tools. Personal fabricators are about to revolutionize the world just as personal computers did a generation ago, and Fab shows us how.

  Exploring the JDS Linux Desktop Tom Adelstein,Sam Hiser,2004 The Java Desktop System (TM), from Sun Microsystems, is a modern system for all kinds of users, novice through expert. As

an unusually robust, well-integrated desktop system, it may become the first to fulfill the promise of mass adoption for open source. JDS brings Linux and other open source software up to a level of usability that makes them suitable for the enormous base of Personal Computer users including office workers, students, mobile and home users. It behaves pretty much the way a Windows or Mac user would expect, but with many more powerful features. JDS has seen widespread adoption in the United States, Britain, China, and elsewhere. This book is the ideal guide to JDS: it is clear and direct, but loaded with insights from authors who have spent time working with, supporting, and enhancing the system. Tom Adelstein is an award winning polymath system designer; Sam Hiser is a respected business consultant with an itch that led him to become the marketing project lead for OpenOffice.org. Both are advocates for open source and founders of the Open Government Interoperability Project, members of the Open Source Software Institute and contributors to the JDShelp.org project. This book carefully covers such housekeeping chores as setting up networking, updates, and backups. Then it enters into great depth concerning the key productivity tools every user needs: email, web browsing, instant messaging, word processing, spreadsheets, and slide presentations. A number of chapters and appendices concerning useful tools, including things you can add to your system, rounds out this remarkably useful book. It has plenty to offer the new user as well as the seasoned Linux professional.
