Risk Assessment in Oral Health Iain L.C. Chapple, Panos N.

Papapanou, 2020-03-25 This book is a wide-ranging guide to risk assessment and risk-based prevention in oral health and dentistry. Readers will find clear explanations of the principles, models, and tools of risk assessment, as well as practical information on risk assessment in relation to periodontal disease, caries, tooth wear, and oral cancer. The lessons that the oral healthcare profession can learn from experiences regarding risk assessment in primary medical care practice, particularly in cardiovascular and diabetes medicine, are highlighted. The closing section focuses specifically on implementation of risk assessment within the dental practice, including training of the oral healthcare team and the need to take into account medicolegal considerations. The book is a very timely addition to the literature, given the move towards wellness- rather than repair-based models of healthcare in Europe and North America and the focus of dental contracts on risk-driven care pathways. It will be of high value for not only practitioners but also professionals and healthcare funding bodies.

Prabhakaran, Shuchi Anand, Thomas A. Gaziano, Jean-Claude Mbanya, Rachel Nugent, 2017-11-17 Cardiovascular, respiratory, and related conditions cause more than 40 percent of all deaths globally, and their substantial burden is rising, particularly in low- and middle-income countries (LMICs). Their burden extends well beyond health effects to include significant economic and societal consequences. Most of these conditions are related, share risk factors, and have common control measures at the clinical, population, and policy levels. Lives can be extended and improved when these diseases are prevented, detected, and managed. This volume summarizes current knowledge and presents evidence-based interventions that are effective, cost-effective, and scalable in LMICs.

**Diabetes Epidemiology, Genetics, Pathogenesis, Diagnosis, Prevention, and**

**Treatment** Enzo Bonora, Ralph A. DeFronzo, 2018-10-23 This book provides the reader with comprehensive information on the epidemiology, etiology, pathogenesis, pathophysiology, clinical features, prevention, and treatment of diabetes with the aim of empowering health care providers in their daily battle against the disease. Diabetes has been identified by WHO and the United Nations as a medical emergency because of the increase in its global prevalence, which may reach one billion in three to four decades if the trend remains unchanged. Despite improved care that is helping to prolong life, diabetes impacts substantially on the quality of life of those affected and kills or disables several million people each year. The disease is systemic because all organs, tissues, and cells suffer in the presence of hyperglycemia and are damaged by the diabetic milieu. Unfortunately, most patients with diabetes will consequently experience chronic diabetic complications. This book, combining basic science with a practical clinical orientation, will be of value for all physicians and nurses who care for patients with diabetes.

**Epidemiology and Medical Statistics** ,2007-11-21 This volume, representing a compilation of authoritative reviews on a multitude of uses of statistics in epidemiology and medical statistics written by internationally renowned experts, is addressed to statisticians working in biomedical and epidemiological fields who use statistical and quantitative methods in their work. While the use of statistics in these fields has a long and rich history, explosive growth of science in general and clinical and epidemiological sciences in particular have gone through a sea of change, spawning the development of new methods and innovative adaptations of standard methods. Since the literature is highly scattered, the Editors have undertaken this humble exercise to document a representative collection of topics of broad interest to diverse users. The volume spans a cross section of standard topics oriented toward users in the current evolving field, as well as special topics in much need which have more recent origins. This volume was prepared especially keeping the applied statisticians in mind, emphasizing applications-oriented methods and techniques, including references to appropriate software when relevant. · Contributors are internationally renowned experts in their respective areas · Addresses emerging statistical challenges in epidemiological, biomedical, and pharmaceutical research · Methods for assessing Biomarkers, analysis of competing risks · Clinical trials including sequential and group sequential, crossover designs, cluster randomized, and adaptive designs · Structural equations modelling and longitudinal data analysis

**Prevention of Diabetes** Peter Schwarz, Prasuna Reddy, 2013-06-24 Expertly authored by the world's leading specialists in the field, Prevention of Diabetes is the definitive guide for better preventative diabetes care. Using an evidence-based approach, it outlines the very latest in the identification of people at high risk for type 2 diabetes and how best to use interventional methods such as screening at-risk individuals, pharmaceutical intervention and lifestyle changes. In addition, it will provide healthcare professionals with the clinical knowledge required to clearly identify the early symptoms of diabetes, enabling them to provide their patients with better clinical care and helping avoid the onset of full-blown diabetes. Also covered are both the health economics of establishing, and the methods of implement/delivering targeted prevention programmes into clinical and health care practice, based on the vast experience of the editors due to their involvement in such programmes. Prevention of Diabetes provides clear and expert information in a practical, accessible way, and is ideal reading for all those with an interest in the prevention of diabetes and obesity, such as public health workers, specialists in diabetes and obesity, and GP's seeing patients with early onset or pre-diabetes symptoms.

**Exercise and Diabetes** Sheri R. Colberg, 2013-05-30 Physical movement has a positive effect on physical fitness, morbidity, and mortality in individuals with diabetes. Although exercise has long been considered a cornerstone of diabetes management, many health care providers fail to prescribe it. In addition, many fitness professionals may be unaware of the complexities of including physical activity in the management of diabetes. Giving patients or clients a full exercise prescription that take other chronic conditions commonly accompanying diabetes into account may be too time-consuming for or beyond the expertise of many health care and fitness professionals. The purpose of this book is to cover the recommended types and quantities of physical activities that can and should be undertaken by all individuals with any type of diabetes, along with precautions related to medication use and diabetes-related health complications. Medications used to control diabetes should augment lifestyle improvements like increased daily physical activity rather than replace them. Up until now, professional books with exercise information and prescriptions were not timely or interactive enough to easily provide busy professionals with access to the latest recommendations for each unique patient. However, simply instructing patients to "exercise more" is

frequently not motivating or informative enough to get them regularly or safely active. This book is changing all that with its up-to-date and easy-to-prescribe exercise and physical activity recommendations and relevant case studies. Read and learn to quickly prescribe effective and appropriate exercise to everyone.

Personalized Predictive Modeling in Type 1 Diabetes Eleni I.

Georga, Dimitrios I Fotiadis, Stelios K. Tigas, 2017-12-11 Personalized Predictive Modeling in Diabetes features state-of-the-art methodologies and algorithmic approaches which have been applied to predictive modeling of glucose concentration, ranging from simple autoregressive models of the CGM time series to multivariate nonlinear regression techniques of machine learning. Developments in the field have been analyzed with respect to: (i) feature set (univariate or multivariate), (ii) regression technique (linear or non-linear), (iii) learning mechanism (batch or sequential), (iv) development and testing procedure and (v) scaling properties. In addition, simulation models of meal-derived glucose absorption and insulin dynamics and kinetics are covered, as an integral part of glucose predictive models. This book will help engineers and clinicians to: select a regression technique which can capture both linear and non-linear dynamics in glucose metabolism in diabetes, and which exhibits good generalization performance under stationary and non-stationary conditions; ensure the scalability of the optimization algorithm (learning mechanism) with respect to the size of the dataset, provided that multiple days of patient monitoring are needed to obtain a reliable predictive model; select a features set which efficiently represents both spatial and temporal dependencies between the input variables and the glucose concentration; select simulation models of subcutaneous insulin absorption and meal absorption; identify an appropriate validation procedure, and identify realistic performance measures. Describes fundamentals of modeling techniques as applied to glucose control Covers model selection process and model validation Offers computer code on a companion website to show implementation of models and algorithms Features the latest developments in the field of diabetes predictive modeling

Health in Rural Canada Judith C. Kulig, Allison M. Williams, 2011-12-06

Health research in Canada has mostly focused on urban areas, often overlooking the unique issues faced by Canadians living in rural and remote areas. This volume provides the first comprehensive overview of the state of rural health and health care in Canada. The contributors bring insights and methodologies from multiple disciplines and community-based research projects to a full spectrum of topics: health literacy, rural health-care delivery and training, Aboriginal health, web-based services and their application, rural palliative care, and rural health research and policy. Together, these multifaceted explorations of the dynamic relationship between health and place offer a valuable resource for understanding the special, ever-changing needs of rural communities.

Screening in Primary Health Care Paula Braveman, E. Tarimo, World Health

Organization, 1994 Establishes a framework and a method for assessing the place of screening programmes in primary health care and determining which programmes will be most likely to benefit patients and health services alike. Though the principles described can be used in any country, particular attention is given to the setting of priorities in situations where resources are extremely limited and choices must be carefully made. Some 97 different health problems and risk factors which might form the focus of screening programmes are critically assessed. The book has eight chapters. The first three examine a number of policies, principles, and widely held assumptions that arise when decisions are made about the value of screening programmes. Chapter one discusses the aims, requirements, and potential benefits of preventive screening within the context of primary health care. In chapter two, the authors establish seven criteria that can help planners and programme administrators decide whether screening will contribute to the aims

of primary health care in a particular situation. Chapter three on the planning and implementation of services alerts readers to several important issues that frequently arise at the local level when screening services are implemented. Various proposals for mandatory HIV screening are used to illustrate legal and ethical issues. In a key achievement, chapter four sets out a method for the systematic assessment of screening programmes and the setting of priorities. Focused on the questions of why, who, how, and when, the method is intended to help decision-makers assess local conditions, think through resource needs for diagnosis and intervention as well as screening anticipate problems, and then select the most appropriate preventive option. Having established a framework for setting priorities, the remaining chapters issue recommendations for a large number of screening options of potential value in primary health care programmes. Separate chapters cover screening in maternal, reproductive and newborn health care, child health care, care to prevent communicable disease, and the health care of adults. Readers are also alerted to situations where screening constitutes a waste of resources where patients may be harmed, and where other preventive options should have first call on resources. The book concludes with a 25-page tabular summary of all screening options considered; the level of resources required for screening, diagnosis, and intervention; and the recommendations made.

*Global Report on Diabetes* Gojka Roglic, 2016 On the occasion of World Health Day 2016, WHO issues a call for action on diabetes, drawing attention to the need to step up prevention and treatment of the disease. The first WHO Global report on diabetes demonstrates that the number of adults living with diabetes has almost quadrupled since 1980 to 422 million adults. This dramatic rise is largely due to the rise in type 2 diabetes and factors driving it include overweight and obesity. In 2012 alone diabetes caused 1.5 million deaths. Its complications can lead to heart attack, stroke, blindness, kidney failure and lower limb amputation. The new report calls upon governments to ensure that people are able to make healthy choices and

that health systems are able to diagnose, treat and care for people with diabetes. It encourages us all as individuals to eat healthily, be physically active, and avoid excessive weight gain.--Publisher's description.
