Information Security Gregory C. Wilshusen, 2008-12-01 Many fed. operations are supported by automated systems that may contain sensitive info. (SI) such as national security info. that, if lost or stolen,

could be disclosed for improper purposes. Compromises of SI at numerous fed. agencies have raised concerns about the extent to which such info. is vulnerable. The use of technological controls such as encryption -- the process of changing plain-text into cipher-text -- can help guard against the unauthorized disclosure of SI. This report determines: (1) how commercially available encryption technologies (ET) can help agencies protect SI and reduce risks; (2) the fed. laws, policies, and guidance for using ET; and (3) the extent to which agencies have implemented, or plan to implement ET. E-Mail Virus Protection Handbook Syngress, 2000-11-06 The E-mail Virus Protection Handbook is organised around specific e-mail clients, server environments, and anti-virus software. The first eight chapters are useful to both users and network professionals; later chapters deal with topics relevant mostly to professionals with an emphasis on how to use e-mail filtering software to monitor all incoming documents for malicious behaviour. In addition, the handbook shows how to scan content and counter email

address forgery attacks. A chapter on mobile code applications, which use Java applets and Active X controls to infect email and, ultimately, other applications and whole systems is presented. The book covers spamming and spoofing: Spam is the practice of sending unsolicited email to users. One spam attack can bring down an entire enterprise email system by sending thousands of bogus messages or mailbombing, which can overload servers. Email spoofing means that users receive messages that appear to have originated from one user, but in actuality were sent from another user. Email spoofing can be used to trick users into sending sensitive information, such as passwords or account numbers, back to the spoofer. Highly topical! Recent events such as the LoveBug virus means the demand for security solutions has never been higher Focuses on specific safeguards and solutions that are readily available to users
