Internet Domain Names, Trademarks and Free Speech Jacqueline D. Lipton,2010-01-01 As the first form of truly rivalrous digital property, Internet domain names raise many challenges for law and policy makers. Analyzing the ways in which past disputes have been decided by courts and arbitrators, Jacqueline Lipton offers a comprehensive, global examination of the legal, regulatory and policy issues that will shape the future of Internet domain name governance. This comprehensive examination of domain name disputes involving personal names and political and cultural issues sheds light on the need to balance trademark policy, free speech and other pressing interests such as privacy and personality rights. The author stresses that because domain names can only be registered to one person at a time, they create problems of scarcity not raised by other forms of digital assets. Also discussed are the kinds of conflicts over domain names that are not effectively addressed by existing regulations, as well as possible regulatory reforms. *Internet Domain Names, Trademarks and Free Speech* brings pivotal new insights to bear in intellectual property and free speech discourse. As such, policymakers, scholars and students of intellectual property, cyber law, computer law, constitutional law, and e-commerce law will find it a valuable resource.

The Current State of Domain Name Regulation Konstantinos Komaitis,2010-07-12 Identifies a tripartite problem - intellectual, institutional and ethical - inherent in the domain name regulation culture. The Domain Name Registration System Jenny Ng,2013 This book offers a comparative analysis of the domain name registration systems in Australia and the United Kingdom. It analyses global trends and international perspectives of domain name registration systems and the dynamics in the respective domain name systems. The research project explores the advantages and disadvantages of the restrictive domain name registration system and the less restrictive registration system by addressing issues of consumer protection and promoting growth in the number of domain name registrations. The book analyses several different types of domain name registration systems and analyses the regulatory frameworks in the restrictive and unrestrictive registration systems. It considers recent developments in this area such as the new transfer rules in Australia which allows for the sale of domain name licence, the new Business Name Registration rules due to enter into force in 2011 in Australia, and the new policy rules on domain name dispute resolution in the United Kingdom. Jenny Ng also examines the legal and economic implications of these regulatory frameworks, drawing upon economic theory, regulatory and systems theory as well as legal analysis and comparison of regulatory frameworks. In doing so the work puts forwards ways in which such systems could be better designed to reflect the needs of the specific circumstances in individual jurisdictions--Provided by publisher.

International Domain Name Law David Lindsay,2007-12-14 The Domain Name System (DNS), which matches computer addresses to human-friendly domain names, has given rise to many legal issues. Two important issues are the institutional arrangements for governing the DNS and the use of trade marks as domain names. This book is the first complete statement of this rapidly-evolving area of the law. In particular, the book includes a comprehensive statement of decisions under the Uniform Domain Name Dispute Resolution Policy (UDRP), the international system for resolving disputes between trade mark owners and domain name registrants. In this path-breaking work the author examines the extent to which principles of national trade mark law have been used in UDRP decisions. It will be essential reading for anyone, whether academic or practitioner, interested in internet law, intellectual property, and e-commerce law.
