**VIVO** Katy Borner,Ying Ding,Mike Conlon,Jon Corson-Rikert,2022-05-31 The world of scholarship is changing rapidly. Increasing demands on scholars, the growing size and complexity of questions and problems to be addressed, and advances in sophistication of data collection, analysis, and presentation require new approaches to scholarship. A ubiquitous, open information infrastructure for scholarship, consisting of linked open data, open-source software tools, and a community committed to sustainability are emerging to meet the needs of scholars today. This book provides an introduction to VIVO, <http://vivoweb.org/>, a tool for representing information about research and researchers -- their scholarly works, research interests, and organizational relationships. VIVO provides an expressive ontology, tools for managing the ontology, and a platform for using the ontology to create and manage linked open data for scholarship and discovery. Begun as a project at Cornell and further developed by an NIH funded consortium, VIVO is now being established as an open-source project with community participation from around the world. By the end of 2012, over 20 countries and 50 organizations will provide information in VIVO format on more than one million researchers and research staff, including publications, research resources, events, funding, courses taught, and other scholarly activity. The rapid growth of VIVO and of VIVO-compatible data sources speaks to the fundamental need to transform scholarship for the 21st century. **A History of Modern Librarianship** Pamela Spence Richards,Wayne A. Wiegand,Marija Dalbello,2015-05-26 A broad, comparative history of librarianship, this intriguing work goes beyond the standard focus on institutions and collections to help you explore the part modern librarianship played—and continues to play—in forming Western cultures. Previous histories of libraries in the Western world—the last of which was published nearly 20 years ago—concentrate on libraries and librarians. This book takes a different approach. It focuses on the practice of librarianship, showing you how that practice has contributed to constructing the heritage of cultures. To do so, this groundbreaking collection of essays presents the history of modern librarianship in the context of recent developments of the library institution, professionalization of librarianship, and innovation through information technology. Organized by region, the book addresses the widely recognized, international impact of Anglo-American librarianship and its continuing influence over the past century, combining critical analysis with chronological histories of modern librarianship in Europe, North America, Australia/New Zealand, and Africa. An introductory chapter explains the origins of the project, and a concluding chapter examines the effects of digitization on modern librarianship in the 21st century.

**International Dictionary of Library Histories** David H. Stam,2001-11 Following the format of Fitzroy Dearborn's highly successful International Dictionary of Historic Places and International Dictionary of University Histories, the International Dictionary of Library Histories provides basic information for each institution - location and holdings - followed by an extensive (1,000-5,000 word) essay on its history as well as a Further Reading list. In addition, the dictionary includes introductory articles on the history of various types of libraries and a library history in various regions of the world. The dictionary profiles more than 200 institutions from around the world, including the world's most important research libraries and other libraries with globally or regionally notable collections, innovative traditions, and significant and interesting histories. The essays take advantage of the growing scholarship of library history to provide insightful overviews of each institution, including not only the traditional values of these libraries but their innovations as well, such as developments in automated systems and electronic delivery. The profiles will emphasize the unique materials of research in these institutions - archives, manuscripts, personal and institutional papers. The introductory articles on types of libraries include topics ranging from theological libraries to prison libraries, from the ancient to the digital. An international team of more than 200 leading scholars in the field have contributed essays to the project.

**The Fine Line** Eviatar Zerubavel,1993-10 Eviatar Zerubavel argues that most of the distinctions we make in our daily lives and in our culture are social constructs. He questions the notion that a clear line can be drawn to separate one time or object or concept from another, and presents witty and provocative counterexamples in defense of ambiguity and anomaly.

**A Social History of Knowledge II** Peter Burke,2013-04-17 Peter Burke follows up his magisterial Social History of Knowledge, picking up where the first volume left off around 1750 at the publication of the French Encyclopédie and following the story through to Wikipedia. Like the previous volume, it offers a social history (or a retrospective sociology of knowledge) in the sense that it focuses not on individuals but on groups, institutions, collective practices and general trends. The book is divided into 3 parts. The first argues that activities which appear to be timeless - gathering knowledge, analysing, disseminating and employing it - are in fact time-bound and take different forms in different periods and places. The second part tries to counter the tendency to write a triumphalist history of the 'growth' of knowledge by discussing losses of knowledge and the price of specialization. The third part offers geographical, sociological and chronological overviews, contrasting the experience of centres and peripheries and arguing that each of the main trends of the period - professionalization, secularization, nationalization, democratization, etc, coexisted and interacted with its opposite. As ever, Peter Burke presents a breath-taking range of scholarship in prose of exemplary clarity and accessibility. This highly anticipated second volume will be essential reading across the humanities and social sciences.

**Scholarly Communication and Bibliometrics** Christine L. Borgman,1990-09 Techniques of mathematical and statistical analysis of books and other media of communication are applied to such works as research reports and scientific journals. About half of the 15 articles are from a special issues of Communication research 16(5), 1989. Annotation copyright Book News, Inc. Portland, Or.

**Mapping Affinities** Dario Rodighiero,2021 Affinity's mapping is a data visualization method that allows us to observe the dynamics of an organization subdivided into complex systems: institutions, universities, governments, etc. It is a graphical tool based on the collaboration variable. Mapping Affinities is, according to the author, an instrument for deciphering complex organizations and improving them. By inserting individuals on these maps, it is also a way of helping them to understand how to evolve in life within an institution. The book tackles this problem with a case study concerning . Data from the actions of researchers at the Lausanne institution are brought together and transformed into an innovative and attractive map.

**Digital History** Daniel Cohen,Roy Rosenzweig,2006 Selected by Choice magazine as an Outstanding Academic Title Digital History: A Guide to Gathering, Preserving, and Presenting the Past on the Web provides for the first time a plainspoken and thorough introduction to the web for historians—teachers and students, archivists and museum curators, professors as well as amateur enthusiasts—who wish to produce online historical work or to build upon and improve the projects they have already started in this important new medium. The book takes the reader step by step through planning a project, understanding the technologies involved and how to choose the appropriate ones, designing a site that is both easy to use and scholarly, digitizing materials in a way that makes them web-friendly while preserving their historical integrity, and reaching and responding to an intended audience effectively. It also explores the repercussions of copyright law and fair use for scholars in a digital age and examines more cutting-edge web techniques involving interactivity, such as sites that use the medium to solicit and collect historical artifacts. Finally, the book provides basic guidance for ensuring that the digital history the reader creates will not disappear in a few years. Throughout, Digital History maintains a realistic sense of the advantages and disadvantages of putting historical documents, interpretations, and discussions online. The authors write in a tone that makes Digital History accessible to those with little knowledge of computers, while including a host of details that more technically savvy readers will find helpful. And although the book focuses particularly on historians, those working in related fields in the humanities and social sciences will also find this to be a useful introduction. Digital History builds upon more than a decade of experience and expertise in creating pioneering and award-winning work by the Center for History and New Media at George Mason University.

Libraries and Society Wendy Evans,David Baker,2011-04-30 This book reviews both the historical and future roles that public, private, academic and special libraries have in supporting and shaping society at local, regional, national and international levels. Globalisation, economic turmoil, political and ethnic tensions, rapid technology development, global warming and other key environmental factors are all combining in myriad and complex ways to affect everyone, both individually and collectively. Fundamental questions are being asked about the future of society and the bedrock organisations that underpin it. Libraries and Society considers the key aspects of library provision and the major challenges that libraries – however defined, managed, developed and provided – now face, and will continue to face in the future. It also focuses on the emerging chapter in cultural, economic and social history and the library’s role in serving diverse communities within this new era. Looks at all types of library in a period of major and discontinuous change, tackling the fundamental questions of the future of libraries in the context of major societal, political and environmental issues Poses important questions for the profession and policy development Fills a major gap in literature (recent discourse and debate on the future of democracy, for example, the library is rarely included)
