This new edition - published to celebrate the book's first publication - helps readers to understand the pleasures of this monumental work and to grapple with its challenges. Copiously equipped with maps, photographs, and explanatory footnotes, it provides a vivid and illuminating context for the experiences of Leopold Bloom, Stephen Dedalus, and Molly Bloom, as well as Joyce's many other Dublin characters, on June 16, 1904. Featuring a facsimile of the historic 1922 Shakespeare and Company text, this version also includes Joyce's own errata as well as references to amendments made in later editions. A new function called REXX with SDSF is available that provides access to SDSF functions through the use of the REXX programming language. This REXX support provides a simple and powerful alternative to using SDSF batch. This IBM Redbooks publication describes the new support and provides sample REXX execs that exploit the new function and that perform real-world tasks related to operations, systems programming, system administration, and automation. This book complements the SDSF documentation, which is primarily reference information. They categorize knowledge work into four sequential activities--accessing, generating, embedding, and transferring--and look at the key skills, techniques, and processes of each. While they present a practical approach to cataloging and storing knowledge so that employees can easily leverage it throughout the firm, the authors caution readers on the limits of communications and information technology in managing intellectual capital.
