Abiotic Stress Physiology of Horticultural Crops N.K. Srinivasa Rao, K.S. Shivashankara, R.H. Laxman, 2016-04-08 This book brings together recent advances in the area of abiotic stress tolerance in various vegetables, fruit crops, plantation crops and tuber crops. The main challenges to improving the productivity of horticultural crops are the different types of abiotic stresses generally caused by climate change at the regional and global level. Heat, drought, cold and salinity are the major abiotic stresses that adversely affect growth and productivity and can trigger a series of morphological, physiological, biochemical and molecular changes in various horticultural crops. To date, there are no books covering horticultural crop-specific abiotic stress tolerance mechanisms and their management. Addressing that gap, the book is divided into 2 sections, the first of which highlights recent advances in the general aspects of abiotic stress tolerance like the role of hormones, reactive oxygen species, seed treatments, molecular

mechanisms of heat tolerance and heavy metal toxicity, while the second focuses on the abiotic stress tolerance mechanisms of various vegetables, fruit crops, plantation crops and tuber crops. It includes comprehensive discussions of fruit crops like mango, grapes, banana, litchi and arid zone fruits; vegetables crops like tomato, capsicum, onion and tuber crops; and plantation crops like coconut, areca nut, oil palm and black pepper. Among the strategies for plant stress survival, examples of both avoidance and tolerance relevant to particular crops are examined in detail, supported by selected comprehensive case studies of progress. As such, the book offers a valuable resource suited for scientists and graduate students working in the fields of crop improvement, genetic engineering, and the abiotic stress tolerance of horticultural crops.

Nuclear Fuel Elements Brian R. T. Frost, 2013-10-22 Nuclear Fuel Elements: Design, Fabrication and Performance is concerned with the design, fabrication, and performance of nuclear fuel elements, with emphasis on fast reactor fuel elements. Topics range from fuel types and the irradiation behavior of fuels to cladding and duct materials, fuel element design and modeling, fuel element performance testing and qualification, and the performance

of water reactor fuels. Fast reactor fuel elements, research and test reactor fuel elements, and unconventional fuel elements are also covered. This volume consists of 12 chapters and begins with an overview of nuclear reactors and fuel elements, as well as fuel element design and development based on the reactor operator's approach, materials scientist's approach, and interdisciplinary approach. The reader is then introduced to different types of nuclear fuels and their irradiation behavior, considerations for using cladding and duct materials in fuel element design and development, and fuel element design and modeling. The chapters that follow focus on the testing of fuel element performance, experimental techniques and equipment for testing fuel element designs, and the performance of fuels for water reactors. Fuel elements for gas-cooled reactors, fast reactors, and research and test reactors are also described. The book concludes with an assessment of unconventional fuel elements. This book will be useful to fuel element technologists as well as materials scientists and engineers.

eForensics and Investigations for Everyone Eamon P. Doherty and Joel Liebesfeld,2007-07-10 This book discusses a variety of topics such as cell phone seizure and examination, electrical fire

investigation, potential vulnerabilities when using historic electrical devices, interpersonal conduct in the Middle East, Russia, and the USA, intellectual property theft, spy cases, and various motivations for crime in a manner that everyone can understand. We also discuss various test equipment and software used for collecting evidence from both physical evidence and invisible radio frequency artifacts. We also discuss electronic equipment that is used to destroy various documents as well as both human and automated processes used to reconstruct small shreds of paper. We discuss real cases regarding document reconstruction such as the American Embassy in Iran and the recently discovered East German (secret police) Stasi shredded records. We also discuss the Hanssen spying case using a PDA and low tech techniques such as the dead drop. Lastly, Jeff Marsh, a brilliant man who became disabled due to an unfortunate accident, demonstrates with the help of Dr. Doherty, various devices such as clocks and mustard jars with concealed purposes that may be used by undercover surveillance professionals or private investigators in a variety of settings, once proper approval is given. Jeff also discusses recreation and conversation as a means of exercising our intellect and informally learning from other people.

International Handbook of Mathematics Education Alan

Bishop,M.A. (Ken) Clements,Christine Keitel-Kreidt,Jeremy Kilpatrick,Colette Laborde,2012-12-06 ALAN J. BISHOP Monash University, Clayton, Victoria, Australia RATIONALE Mathematics Education is becoming a well-documented field with many books, journals and international conferences focusing on a variety of aspects relating to theory, research and practice. That documentation also reflects the fact that the field has expanded enormously in the last twenty years. At the 8th International

Congress on Mathematics Education (ICME) in Seville, Spain, for example, there were 26 specialist Working Groups and 26 specialist Topic Groups, as well as a host of other group activities. In 1950 the 'Commission Internationale pour l'Etude et l'Amelioration de l'Enseignement des Mathematiques' (CIEAEM) was formed and twenty years ago another active group, the 'International Group for the Psychology of Mathematics Education' (PME), began at the third ICME at Karlsruhe in 1976. Since then several other specialist groups have been formed, and are also active through regular conferences and publications, as documented in Edward Jacobsen's Chapter 34 in this volume.

International Handbook of Teachers and Teaching Bruce J. Biddle, T.L. Good, I. Goodson, 2013-11-11 Recent years have generated a huge increase in the number of research and scholarly works concerned with teachers and teaching, and this effort has generated new and important insights that are crucial for understanding education today. This handbook provides a host of chapters, written by leading authorities, that review both the major traditions of work and the newest perspectives, concepts, insights, and research-based knowledge concerned with teachers and teaching. Many of the chapters discuss developments that are

international in scope, but coverage is also provided for education in a number of specific countries. Many chapters also review contemporary problems faced by educators and the dangers posed by recent, politically-inspired attempts to 'reform' schools and school systems. The Handbook provides an invaluable resource for scholars, teacher-educators, graduate students, and all thoughtful persons concerned with the best thinking about teachers and teaching, current problems, and the future of education.
