Where is Early's father? He's not the kind of father who would disappear. But he's gone . . . and he's left a whole lot of trouble behind.As danger closes in, Early, her mom, and her brother have to flee their apartment. With nowhere else to go, they are forced to move into a city shelter. Once there, Early starts asking questions and looking for answers. Because her father hasn't disappeared without a trace. How Fast is It? Ben Hillman,2008 In this third book by Ben Hillman, young readers will learn and see just how fast something is. By comparing objects such as the Thrust SSC (that's a Thrust-powered Super Sonic Car), an ostrich (don't underestimate the ostrich, my friend!), the human brain, and bamboo,wildly different objects are taken out of normal context and placed next to one another to allow for new and exciting perspectives. So just how fast is an ostrich? An ostrich would beat a top-notch professional cyclist in a ten-mile (sixteen km) race, hands down! While the best cyclists can race at blistering speeds of twenty-five miles per hour, the ostrich can run at forty-five miles per hour! Other books in the series that kids will enjoy: How Big Is It? and How Strong Is It?

Fast Fat Flush Millan Chessman,2020-02-07 Without your health, you have nothing. It is the very foundation by which everything else in life grows and flourishes. Without it, peace, joy, happiness, and purpose are absent, and the ability to express love and support to your family, spouse, employer, and friends can be lost and nonexistent. In pain and suffering, one is caught up totally into themselves and unable to serve and care for others. In five decades of practice as a fasting coach, this book's author observed over half of her clients suffered from depression. Today we have evidence that this is a result of toxicity and incorrect diet, resulting in sickness, mentally and physically. Success in life's ambitions can become illusive. Many people state they eat clean and healthy, but further investigation as to what is being put into the body is actually fueling carcinogens, free radicals, toxicity, and disease, creating addictions to unhealthy (and deadly) foods. This prematurely steals life at an exponential rate. Many of our medical directives ensure the continuation of these cycles through toxic drugs and adulterated dietary guidelines. The most important approach to master a healthy condition is by taking steps outlined in this book through fasting, healthy eating, detoxification, vitamin/mineral supplementation, and, importantly, exercises. Fasting is the universal key to combating illness as well as keeping weight under control and never having to diet again for a lifetime. This is the ultimate guide to optimizing your health, the greatest asset you will ever possess. This book will guide you into a place of vibrant, purposeful, and glowing well-being, resulting in abundant life. It is not difficult. This book tells you how.

Fast/Forward Julian Birkinshaw,Jonas Ridderstråle,2017-04-04 A guide to the adhocracy form of business management and how it can foster a company's success. The leading companies of the past twenty years have all harnessed the power of information to gain competitive advantage. But as access to big data becomes ubiquitous, it can no longer guarantee a leg up. Fast/Forward makes the case that we are entering a new era in which firms that understand the limits of 1s and 0s will take the lead. Whereas the industrial age saw the rise of bureaucracy, and the information age has been described as a meritocracy, we are witnessing the rise of adhocracy. In uncertain, rapidly-changing times, adhocratic organizations scan the horizon for winning opportunities. Then, instead of questing after more analysis, they respond with agility by making smart, intuitive decisions. Combining decisive action with emotional conviction, future-facing firms seize the day. Fast/Forward paints the big picture of a new approach to strategy and provides the necessary playbook to make your company fit for the future. Praise for Fast/Forward "Fast/Forward makes a compelling case for spontaneity, speed, and a willingness to lead with intuition. More importantly, it speaks to the leadership qualities required to implement its suggestions—providing practical ways to cultivate to those qualities." —Jeffrey Pfeffer, Stanford University, author of *Power: Why Some People Have It—and Others Don't* "[Birkinshaw and Ridderstråle] are on the right track: In an ever-faster, globalized world, companies not only need a compelling strategy, but also an adaptive and caring performance culture. To unleash their full ingenuity, we have to empower our colleagues to act like owners." —Joe Kaeser, President and CEO, Siemens AG "Big data is oversold as the most important facet of competitive advantage. Rather, breakthrough leaps of faith are necessary to achieve extraordinary results. Fast-Forward is full of practical advice about how to capitalize on this simple idea in order to forge your corporate future." —Anita McGahan, Rotman School of Management, author of *How Industries Evolve*

Fast Fiction Denise Jaden,2014-01-15 Writers flock to National Novel Writing Month (NaNoWriMo) each November because it provides a procrastination-busting deadline. But only a fraction of the participants meet their goal. Denise Jaden was part of that fraction, writing first drafts of two subsequently published novels in that tight time frame. In Fast Fiction, she shows other writers how to do what she did, step-by-step, writer to writer. To ensure success, her program begins a month before the month of drafting. During this prep period writers think through plot, theme, characters, setting, etc. Then Jaden provides day-by-day coaching for the thirty-day drafting period. After writers "race to the finish," they are not left high and dry. Jaden's "After the Draft" revision tips allow writers to determine if a draft is not just workable but compelling, so that they don't waste

months or years developing it. Her camaraderie and skill allow Jaden to both instruct and inspire.

Fast Quantitative Magnetic Resonance Imaging Guido Buonincontri, Joshua Kaggie, Martin Graves, 2020-02-20 Among medical imaging modalities, magnetic resonance imaging (MRI) stands out for its excellent soft-tissue contrast, anatomical detail, and high sensitivity for disease detection. However, as proven by the continuous and vast effort to develop new MRI techniques, limitations and open challenges remain. The primary source of contrast in MRI images are the various relaxation parameters associated with the nuclear magnetic resonance (NMR) phenomena upon which MRI is based. Although it is possible to quantify these relaxation parameters (qMRI) they are rarely used in the clinic, and radiological interpretation of images is primarily based upon images that are relaxation time weighted. The clinical adoption of qMRI is mainly limited by the long acquisition times required to quantify each relaxation parameter as well as questions around their accuracy and reliability. More specifically, the main limitations of qMRI methods have been the difficulty in dealing with the high inter-parameter correlations and a high sensitivity to MRI system imperfections. Recently, new methods for rapid qMRI have been proposed. The multi-parametric models at the heart of these techniques have the main advantage of accounting for the correlations between the parameters of interest as well as system imperfections. This holistic view on the MR signal makes it possible to regress many individual parameters at once, potentially with a higher accuracy. Novel, accurate techniques promise a fast estimation of relevant MRI quantities, including but not limited to longitudinal (T1) and transverse (T2) relaxation times. Among these emerging methods, MR Fingerprinting (MRF), synthetic MR (syMRI or MAGIC), and T1–T2 Shuffling are making their way into the clinical world at a very fast pace. However, the main underlying assumptions and algorithms used are sometimes different from those found in the conventional MRI literature, and can be elusive at times. In this book, we take the opportunity to study and describe the main assumptions, theoretical background, and methods that are the basis of these emerging techniques. Quantitative transient state imaging provides an incredible, transformative opportunity for MRI. There is huge potential to further extend the physics, in conjunction with the underlying physiology, toward a better theoretical description of the underlying models, their application, and evaluation to improve the assessment of disease and treatment efficacy.

Architectures and Synthesizers for Ultra-low Power Fast Frequency-Hopping WSN Radios Emanuele Lopelli, Johan van der Tang, Arthur H.M. van Roermund, 2010-11-19 Wireless sensor networks have the potential to become the third wireless revolution after wireless voice networks in the 80s and wireless data networks in the late 90s. Unfortunately, radio power consumption is still a major bottleneck to the wide adoption of this technology. Different directions have been explored to minimize the radio consumption, but the major drawback of the proposed solutions is a reduced wireless link robustness. The primary goal of Architectures and Synthesizers for Ultra-low Power Fast Frequency-Hopping WSN Radios is to discuss, in detail, existing and new architectural and circuit level solutions for ultra-low power, robust, uni-directional and bi-directional radio links. Architectures and Synthesizers for Ultra-low Power Fast Frequency-Hopping WSN Radios guides the reader through the many system, circuit and technology trade-offs he will be facing in the design of communication systems for wireless sensor networks. Finally, this book, through different examples realized in both advanced CMOS and bipolar technologies opens a new path in the radio design, showing how radio link robustness can be guaranteed by techniques that were previously exclusively used in radio systems for middle or high end applications like Bluetooth and military communications while still minimizing the overall system power consumption.

Finite Elements and Fast Iterative Solvers Howard C. Elman,David J. Silvester,Andrew J. Wathen,2014 This book is a description of why and how to do Scientific Computing for fundamental models of fluid flow. It contains introduction, motivation, analysis, and algorithms and is closely tied to freely available MATLAB codes that implement the methods described. The focus is on finite element approximation methods and fast iterative solution methods for the consequent linear(ized) systems arising in important problems that model incompressible fluid flow. The problems addressed are the Poisson equation, Convection-Diffusion problem, Stokes problem and Navier-Stokes problem, including new material on time-dependent problems and models of multi-physics. The corresponding iterative algebra based on preconditioned Krylov subspace and multigrid techniques is for symmetric and positive definite, nonsymmetric positive definite, symmetric indefinite and nonsymmetric indefinite matrix systems respectively. For each problem and associated solvers there is a description of how to compute together with theoretical analysis that guides the choice of approaches and describes what happens in practice in the many illustrative numerical results throughout the book (computed with the freely downloadable IFISS software). All of the numerical results should be reproducible by readers who have access to MATLAB and there is considerable scope for experimentation in the computational laboratory provided by the software. Developments in the field since the first edition was published have been represented in three new chapters covering optimization with PDE constraints (Chapter 5); solution of unsteady Navier-Stokes equations (Chapter 10); solution of models of buoyancy-driven flow (Chapter 11). Each chapter has many theoretical problems and practical computer exercises that involve the use of the IFISS software. This book is suitable as an introduction to iterative linear solvers or more generally as a model of Scientific Computing at an advanced undergraduate or beginning graduate level.
