Neurobiology of Feeding and Nutrition Jacques Magnen,2012-12-02 Neurobiology of Feeding and Nutrition focuses on feeding as the behavior of primal survival. This book discusses the sensory, brain, and endocrine involvement in the behavioral and nutritional regulatory processes. Organized into 12 chapters, this book starts with an overview of the initial survey of works on the normal feeding of an animal model with emphasis on the basic periodicity of the behavior and the significance of this behavior. This text then explores the overall stimulation to eat, which results from the combination of sensory and systematic stimuli. Other chapters examine the other compounds of the stimulation to eat and discuss the targets of the systematic stimulus to eat or not to eat. This book describes as well the general organization of sensory projection in the central nervous system. The final chapter deals with the ontogeny of feeding behavior from birth to adulthood. This book is a valuable resource for scientists and technologists interested in feeding and nutrition.

Feeding Everyone No Matter What David Denkenberger,Joshua M. Pearce,2014-11-14 Feeding Everyone No Matter What presents a scientific approach to the practicalities of planning for long-term interruption to food production. The primary historic solution developed over the last several decades is increased food storage. However, storing up enough food to feed everyone would take a significant amount of time and would increase the price of food, killing additional people due to inadequate global access to affordable food. Humanity is far from doomed, however, in these situations - there are solutions. This book provides an order of magnitude technical analysis comparing caloric requirements of all humans for five years with conversion of existing vegetation and fossil fuels to edible food. It presents mechanisms for global-scale conversion including: natural gas-digesting bacteria, extracting food from leaves, and conversion of fiber by enzymes, mushroom or bacteria growth, or a two-step process involving partial decomposition of fiber by fungi and/or bacteria and feeding them to animals such as beetles, ruminants (cows, deer, etc), rats and chickens. It includes an analysis to determine the ramp rates for each option and the results show that careful planning and global cooperation could ensure the bulk of humanity and biodiversity could be maintained in even in the most extreme circumstances. Summarizes the severity and probabilities of global catastrophe scenarios, which could lead to a complete loss of agricultural production More than 10 detailed mechanisms for global-scale solutions to the food crisis and their evaluation to test their viability Detailed roadmap for future R&D for human survival after global catastrophe

Feeding Infants and Children from Birth to 24 Months National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Food and Nutrition Board,Committee on Scoping Existing Guidelines for Feeding Recommendations for Infants and Young Children Under Age 2,2020-08-28 Recommendations for feeding infants and young children have changed substantially over time owing to scientific advances, cultural influences, societal trends, and other factors. At the same time, stronger approaches to reviewing and synthesizing scientific evidence have evolved, such that there are now established protocols for developing evidence-based health recommendations. However, not all authoritative bodies have used such approaches for developing infant feeding guidance, and for many feeding questions there is little or no sound evidence available to guide best practices, despite the fact that research on infant and young child feeding has expanded in recent decades. Summarizing the current landscape of feeding recommendations for infants and young children can reveal the level of consistency of existing guidance, shed

light on the types of evidence that underpin each recommendation, and provide insight into the feasibility of harmonizing guidelines. Feeding Infants and Children from Birth to 24 Months collects, compares, and summarizes existing recommendations on what and how to feed infants and young children from birth to 24 months of age. This report makes recommendations to stakeholders on strategies for communicating and disseminating feeding recommendations.

Feed Your Pet Right Marion Nestle,Malden Nesheim,2010-05-11 Human nutrition expert and author of the critically acclaimed What to Eat, Marion Nestle, Ph.D., M.P.H., has joined forces with Malden C. Nesheim, Ph.D., a Cornell animal nutrition expert, to write Feed Your Pet Right, the first complete, research-based guide to selecting the best, most healthful foods for your cat or dog. Human nutrition expert and author of the critically acclaimed What to Eat, Marion Nestle, Ph.D., M.P.H., has joined forces with Malden C. Nesheim, Ph.D., a Cornell animal nutrition expert, to write Feed Your Pet Right, the first complete, research-based guide to selecting the best, most healthful foods for your cat or dog. A comprehensive and objective look at the science behind pet food, it tells a fascinating story while evaluating the range of products available and examining the booming pet food industry and its marketing practices. Drs. Nestle and Nesheim also present the results of their unique research into this sometimes secretive industry. Through conversations with pet food manufacturers and firsthand observations, they reveal how some companies have refused to answer questions or permit visits. The authors also analyze food products, basic ingredients, sources of ingredients, and the optimal ways to feed companion animals. In this engaging narrative, they explain how ethical considerations affect pet food research and product development, how pet foods are regulated, and how companies influence veterinary training and advice. They conclude with specific recommendations for pet owners, the pet food industry, and regulators. A road map to the most nutritious diets for cats and dogs, Feed Your Pet Right is sure to be a reference classic to which all pet owners will turn for years to come.

Feeding the Hungry Michelle Jurkovich,2020-10-15 Food insecurity poses one of the most pressing development and human security challenges in the world. In Feeding the Hungry, Michelle Jurkovich examines the social and normative environments in which international anti-hunger organizations are working and argues that despite international law ascribing responsibility to national governments to ensure the right to food of their citizens, there is no shared social consensus on who ought to do what to solve the hunger problem. Drawing on interviews with staff at top international anti-hunger organizations as well as archival research at the United Nations Food and Agriculture Organization, the UK National Archives, and the U.S. National Archives, Jurkovich provides a new analytic model of transnational advocacy. In investigating advocacy around a critical economic and social right—the right to food—Jurkovich challenges existing understandings of the relationships among human rights, norms, and laws. Most important, Feeding the Hungry provides an expanded conceptual tool kit with which we can examine and understand the social and moral forces at play in rights advocacy.

Feed Mira Grant,2010-05-01 Feed is an electrifying and critically acclaimed novel of a world a half-step from our own that the New York Times calls “Astonishing” — a novel of zombies, geeks, politics, social media, and the virus that runs through them all — from New York Times bestseller Mira Grant. The infection spread, virus blocks taking over bodies and minds with one, unstoppable command: FEED. Now, twenty years after the Rising, Georgia and Shaun Mason are on the trail of the biggest story of their lives—the dark conspiracy behind the infected. The truth will out, even if it kills them.
