As we all know change is intrinsic to 'society', which never remains static but is always evolving, and, from time to time, witnesses new developments in social, scientific and economic fields. Under the foregoing chapters of this work-up, we have discussed the development of digital technology and the Internet in 'scientific sphere', and how these scientific developments have created problems before the economics, the sociology and the jurisprudence of copyright. We witnessed that the binary language of zeros and ones has produced,

Plasticity, transmissibility and process-ability, referred to as attributes of digital society and how they have made it possible for the copyrighted material to be created and stored in electronic form on computers and how the computers containing the copyrighted material when attached to the Internet, called, the network of networks make it possible for people to exchange and use in any manner they like such information between the computers from different locations across the world.

Introduction to Choreographies Fabrizio Montesi,2023-04-30 In concurrent and distributed systems, processes can complete tasks together by playing their parts in a joint plan. The plan, or protocol, can be written as a choreography: a formal description of overall behaviour that processes should collaborate to implement, like authenticating a user or purchasing an item online. Formality brings clarity, but not only that. Choreographies can contribute to important safety and liveness properties. This book is an ideal introduction to theory of choreographies for students, researchers, and professionals in computer science and applied mathematics. It covers languages for writing choreographies and their semantics, and principles for implementing choreographies correctly. The text treats the study of choreographies as a discipline in its own right, following a systematic approach that starts from simple foundations and proceeds to more advanced features in incremental steps. Each chapter includes examples and exercises aimed at helping with understanding the theory and its relation to practice.
