A Concordance to the French Poetry and Prose of John Gower R. F. Yeager,Mark West,Robin L.

Hinson,2012-01-01 That the poet John Gower was a major literary figure in England at the close of the fourteenth century is no longer in question. Scholarly attention paid to him and to his work over the past twenty- five years has redeemed him from an undeserved obscurity imposed by the preceding two hundred. The facts of his life and career are now documented, and recent critical assessment has placed his achievement most accurately alongside Chaucer's, Langland's, and the Gawain- poet's. Unique among his contemporaries, all of whom undoubtedly read and used French in some measure, Gower alone has left us a significant body of verse and prose in Anglo-Norman; chiefly, the twelve-stanza poem *Mirour de l'Omme*, the *Cinkante Balades*, and the *Traitié pour les amantz marietz*. We are offered in this concordance of his Anglo- Norman work a unique opportunity to view a poetic language as it was written and read in England until Gower's death in 1408 and beyond.

Speech Alvin Meyer Liberman,1996 Alvin Liberman and his colleagues at Haskins Laboratories in New Haven created the techniques, the methods, and the insights appropriate to the study of speech perception. This volume brings together a carefully edited collection of twenty-three of their most important research articles, along with an introduction by Liberman that charts the progress of the research - the errors as well as the hits - over the past five decades. Liberman has been the main analytic and synthesizing scientist in the development of a field that holds a fascination for anyone interested in the place of speech in the biological scheme of things. The more specific implications cover a broad range: at the one extreme, the problems associated with the machine production and recognition of speech; at the other, our understanding of how children learn to read its alphabetic transcriptions, and why some cannot.

Technology in Interlanguage Pragmatics Research and Teaching Naoko Taguchi,Julie M. Sykes,2013-06-20 Technology-informed approaches to L2 research and teaching have prompted great interest by both researchers and practitioners alike. This book highlights the relationship between digitally-mediated technologies and second language pragmatics by presenting exemplary applications of technology for both research and pedagogy. Part I presents technology-informed research practices that range from

measuring response times when processing conversational implicature to studies examining systematic pragmatic learning via online activities and multiuser virtual environments, as well as analyzing features of pragmatic language use in social networking and longitudinal learner corpora. Part II surveys a variety of technology-assisted tools for teaching pragmatics, including: place-based mobile games, blogging, web-based testing, and automated text analysis software. The volume will be of interest for those interested in technological tools to expand the scope of traditional methods of data collection, analysis, and teaching and critically examining how technology can best be leveraged as a solution to existing barriers to pragmatics research and instruction.

Crime, Law and Popular Culture in Europe, 1500-1900 Richard McMahon, 2013-06-17 Exploring the relationship between crime, law and popular culture in Europe from the 16th century onwards, this title looks at how crime was understood and dealt with by ordinary people, as well as looking at to what degree official law and the criminal justice system was rejected as a means of dealing with criminal activity.

Geometry of Nonholonomically Constrained Systems Richard H. Cushman, Hans Duistermaat, Jerzy J. Niemycki, 2010 This book gives a modern differential geometric treatment of linearly nonholonomically constrained systems. It discusses in detail what is meant by symmetry of such a system and gives a general theory of how to reduce such a symmetry using the concept of a differential space and the almost Poisson bracket structure of its algebra of smooth functions. The above theory is applied to the concrete example of Carathodory's sleigh and the convex rolling rigid body. The qualitative behavior of the motion of the rolling disk is treated exhaustively and in detail. In particular, it classifies all motions of the disk, including those where the disk falls flat and those where it nearly falls flat. The geometric techniques described in this book for symmetry reduction have not appeared in any book before. Nor has the detailed description of the motion of the rolling disk. In this respect, the authors are trail-blazers in their respective fields.
