Air Purifier Zhonglin Xu, 2018-09-03 This book discusses the development, types and application principles of portable air purifiers in China. It analyzes the theoretical characteristics of air purifiers under various operational conditions, and points out that the term "Clean Air Delivery Rate" cannot be used to precisely reflect the problems that occur under various operational conditions. By comparing theoretical and measured data, it highlights the main features of air purifiers and key points in the design process for different applications. Calculation methods for the indoor particle concentration and the self-purification time are also provided. The book describes the conditions for window opening in smog and for selecting air purifiers, and proposes a new method for improving their measurement. In closing, it includes a new assessment index.

How to Make a Photocatalytic Air Purifier J Richard Hollos,Stefan Hollos,2023-07-16 We write books, so we spend a lot of time indoors. When we

go outside the air seems so much fresher than inside. Is there any way to recreate that fresh air feeling indoors? That's a question we've been trying to answer for a few years now. We think we've found an answer. It's called photocatalytic air purification. What exactly this means is described in the first section. The final section of this guide describes in detail how to actually make an air purifier that uses photocatalysis to remove volatile organic chemicals (VOCs) from the air. The photocatalytic air purifier which we've created and describe here has made a positive difference to us. We set it on a table next to where we work and run it whenever we're working. When it's running, the air seems fresh, similar to having a nearby open window. It's not magic but it has reduced the incidence of itchy watery eyes, irritated throat, runny nose and general feeling of malaise that VOCs can produce.

Microplastic Pollution Subramanian Senthilkannan Muthu, 2021-03-14 This book addresses the emergent need to act on reducing or getting rid of micro plastic pollution, to achieve a sustainable environment. Microplastics are small plastic pieces, which are less than five millimeters long which can be harmful to our oceans and aquatic life. These predominantly include microfibers from clothing, microbeads, and plastic pellets. Microplastics impact aquatic creatures, turtles and birds. According to the first study on estimation of human ingestion of microplastic, on average a person consumes at least 50,000 particles of microplastic a year and breathes a similar

quantity. Ingested microplastic particles can physically damage organs and also compromise immune function and stymie growth and reproduction. This book presents six informative chapters in order to alleviate the above mentioned issues□.

Nicotine Gregor Hens, 2017-01-10 NAMED A BEST BOOK OF THE YEAR BY THE ECONOMIST By turns philosophical and darkly comic, an ex-smoker's meditation on the nature and consequences of his nearly lifelong addiction. Written with the passion of an obsessive, Nicotine addresses a lifelong addiction, from the thrill of the first drag to the perennial last last cigarette. Reflecting on his experiences as a smoker from a young age, Gregor Hens investigates the irreversible effects of nicotine on thought and patterns of behavior. He extends the conversation with other smokers to meditations on Mark Twain and Italo Svevo, the nature of habit, and the validity of hypnosis. With comic insight and meticulous precision, Hens deconstructs every facet of dependency, offering a brilliant analysis of the psychopathology of addiction. This is a book about the physical, emotional, and psychological power of nicotine as not only an addictive drug, but also a gateway to memory, a long trail of streetlights in the rearview mirror of a smoker's life. Cigarettes are sometimes a solace, sometimes a weakness, but always a witness and companion. This is a meditation, an ode, and a eulogy, one that will be passed hand-to-hand between close friends.

Experimental Testing and Performance Analysis of "room Air Cleaners" Pavan Kumar Mudiya, 2008 HMI industries are the manufacture of the air cleaners and vacuum cleaners, in which a solution is adapted for the current model of the volute to the new design of the volute in order to calculate the Clean Air Delivery rate and qualify for the Energy Star requirements. For the above

model to be employed as a Energy Star certificate, a test rig was made in which air velocity and flow rate was calculated for the three different air cleaners in two cases i.e.; (i) three different air cleaners with different filters and different rpm's (ii) three different air cleaners with the same filters and the same rpm's, in order to qualify for the Energy star requirements parameters like frequency, voltage and power output values also calculated. An important and primary objective of this study is the development of a volute of the air cleaner to characterize the major CADR value of the air cleaner. It is anticipated that the experience gained from this can be extrapolated to more complex systems like in the air purifiers with a view towards improving the optimization capability of the air cleaner analysis. It is also anticipated that the values of the flow rate and air velocity will improve the ability of the current model to satisfy for the Energy star and improve the energy conversion and the consuming power.

WHO Guidelines for Indoor Air Quality ,2010 This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public

health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

How Tobacco Smoke Causes Disease , 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Gravimetric and Dust-spot Procedures for Testing Air-cleaning Devices Used

in General Ventilation for Removing Particulate Matter American Society of Heating, Refrigerating and Air-Conditioning Engineers, 1992 This standard establishes procedures to measure the ability of air-cleaning devices to remove dust as they become loaded with standard synthetic dust. The dust-removal performance is measured in two ways: first by the percentage of the weight of the synthetic dust captured by the filter (ASHRAE weight arrestance) and second by comparing the blackening of targets both upstream and downstream of the air-cleaning device using ambient atmospheric dust (ASHRAE dust-spot efficiency). The procedures in this standard do not measure the ability of the air cleaner to remove particles of specific diameters. This standard is not intended for testing air cleaners exhibiting ASHRAE dust-spot efficiencies of greater than 98%.
