The Panorama Stephan Oettermann,1997 The significance of panorama painting in the

nineteenth century is frequently cited in contemporary debates about visuality and the emergence of the modern spectator. Stephan Oettermann's The Panorama is the first major historical study to appear in English of the rich phenomenon of the panorama, one of the most influential forms of visual entertainment in the nineteenth century. In this richly illustrated book Oettermann gives readers a concrete sense of the structural and experiential reality of the panorama, and the many forms it took throughout Europe and North America--a crucial task given that very few of the original nineteenth-century panoramas survive. At the same time, he outlines the many ways in which these remarkable and often immense 360-degree images were part of a larger transformation of the status of the observer and of popular culture. Thus, the panorama is treated not only as a new kind of image but also as an architectural and informational component of the new urban spaces and media networks.

Rendering Techniques '98 George Drettakis,Nelson Max,1998-08-11 Some of the best current research on realistic rendering is included in this volume. It emphasizes the current hot topics" in this field: image based rendering, and efficient local and global-illumination calculations. In the first of these areas, there are several contributions on real-world model acquisition and display, on using image-based techniques for illumination and on efficient ways to parameterize and compress images or light fields, as well as on clever uses of texture and compositing hardware to achieve image warping and 3D surface textures. In global and local illumination, there are contributions on extending the techniques beyond diffuse reflections, to include specular and more general angle dependent reflection functions, on efficiently representing and approximating these

reflection functions, on representing light sources and on approximating visibility and shadows. Finally, there are two contributions on how to use knowledge about human perception to concentrate the work of accurate rendering only where it will be noticed, and a survey of computer graphics techniques used in the production of a feature length computer-animated film with full 3D characters.

Twelve Years a Slave Solomon Northup,2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some

years lecturing across the US,on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.
