Best Free AntiVirus Software Jonathan,2014-11-25 Anti-Virus software is a program or set of programs that are designed to prevent, search for, detect, and remove software viruses, and other malicious software like worms, trojans, adware. These tools are critical for users to have installed and up-to-date because a computer without anti-virus software installed will be infected within minutes of connecting to the internet. The bombardment is constant, with anti-virus companies update their detection tools constantly to deal with the more than 60,000 new pieces of malware created daily. There are several different companies that build and offer anti-virus software and what each offers can vary but all perform some basic functions: * Scan specific files or directories for any malware or known malicious patterns * Allow you to schedule scans to automatically run for you * Allow you to initiate a scan of a specific file or of your computer, or of a CD or flash drive at any time. * Remove any malicious code detected -sometimes you will be notified of an infection and asked if you want to clean the file, other programs will automatically do this behind the scenes. * Show you the 'health' of your computer Always be sure you have the best, up-to-date security software installed to protect your computers, laptops, tablets and smartphones.

Digital Defense Joseph Pelton, Indu B. Singh, 2015-10-16 Drs. Pelton and Singh warn of the increasing risks of cybercrime and lay out a series of commonsense precautions to guard against individual security breaches. This guide clearly explains the technology at issue, the points of weakness and the best ways to proactively monitor and maintain the integrity of individual networks. Covering both the most common personal attacks of identity fraud, phishing, malware and breach of access as well as the larger threats against companies and governmental systems, the authors explain the vulnerabilities of the internet age. As more and more of life's transactions take place online, the average computer user and society at large have a lot to lose. All users can take steps to secure their information. Cybercrime is so subtle and hidden, people can ignore the threat until it is too late. Yet today about every three seconds a person is hit by some form of cyber attack out of the blue. Locking the "cyber-barn door" after a hacker has struck is way too late. Cyber security, cyber crime and cyber terrorism may seem to be intellectual crimes that don't really touch the average person, but the threat is real. Demystifying them is the most important step and this accessible explanation covers all the bases.

Protect Your PC: Prevent Viruses, Malware, and Spyware from Ruining Your Computer Afi-Odelia Scruggs, 2012-02-29
ABOUT THE BOOK Three of saddest words in English are “If I’d only...” As in, “If I’d only invested in blue-chip stocks,” or “If I’d only saved some money...” But those words become more tragic when applied to your PC. “If I’d only backed up my PC, I wouldn’t have lost all my files,” or, “if I’d only updated my anti-virus software, I wouldn’t have to buy a new computer” are thoughts that must confronted all too often. Just thinking about those disasters can make one cry. Having a damaged PC is a tragedy, because many problems are preventable. You just need the right strategies and tools. Arming your PC doesn’t require lots of money or time. Just follow these basic steps

EXCERPT FROM THE BOOK When you get the flu, viruses use your body to reproduce and spread. A computer virus uses your PC in a similar way. The virus embeds itself in a legitimate program, but it can’t execute or open by itself. Opening the infected program executes the virus, and trouble starts. The effect can more devastating if the malware is a worm. A worm is a type of virus that spreads throughout networks. It’s more dangerous because it can replicate itself. In 2000, the “I Love You” worm infected more than 50 million computers. Its victims included the British Parliament, the CIA, and the Pentagon. Anti-virus software can keep viral programs from turning your PC into an incubator. If the software detects a virus, it can remove or quarantine it. However, viruses are created constantly, so anti-viral software requires regular updates to be effective. You can configure the program to update automatically and you can also schedule regular scans of your entire system. You don’t have to spend a lot of money to get decent software.
