*Planetary Ring Systems* Matthew S. Tiscareno, Carl D. Murray, 2018-03-22 Planetary rings are among the most intriguing structures of our solar system and have fascinated generations of astronomers. Collating emerging knowledge in the field, this volume reviews our current understanding of ring systems with reference to the rings of Saturn, Uranus, Neptune, and more. Written by leading experts, the history of ring research and the basics of ring-particle orbits is followed by a review of the known planetary ring systems. All aspects of ring system science are described in detail, including specific dynamical processes, types of structures, thermal properties and their origins, and investigations using computer simulations and laboratory experiments. The concluding chapters discuss the prospects of future missions to planetary rings, the ways in which ring science informs and is informed by the study of other astrophysical disks, and a perspective on the field's future. Researchers of all levels will benefit from this thorough and engaging presentation.

*The History of the Old Fring'd Petticoat; A Fragment* DEMOCRITUS., 2018-04-19 The 18th century was a wealth of knowledge, exploration and rapidly growing technology and expanding record-keeping made possible by advances in the printing press. In its determination to preserve the century of revolution, Gale initiated a revolution of its own: digitization of epic proportions to preserve these invaluable works in the largest archive of its kind. Now for the first time these high-quality digital copies of original 18th century manuscripts are available in print, making them highly accessible to libraries, undergraduate students, and independent scholars. Delve into what it was like to live during the eighteenth century by reading the first-hand accounts of everyday people, including city dwellers and farmers, businessmen and bankers, artisans and merchants, artists and their patrons, politicians and their constituents. Original texts make the American, French, and Industrial revolutions vividly contemporary. ++++ The below data was compiled from various identification fields in the bibliographic record of this title. *Machiavelli Goes to the Movies* Eric T. Kasper, Troy Kozma, 2015-03-24 Niccolò Machiavelli's *The Prince* remains an influential book more than five centuries after he wrote his timeless classic. However, the political philosophy expressed by Machiavelli in his tome is often misunderstood. Although he thought humans to be rational, self-interested creatures, and even though he proposed an approach to politics in which the ends justify the means, Machiavelli was not, as some have argued, simply "a teacher of evil." The Prince's many ancient and medieval examples, while relevant to sixteenth century readers, are lost on most of today's students of Machiavelli. Examples from modern films and television programs, which are more familiar and understandable to contemporary readers, provide a better way to accurately teach Machiavelli's lessons. Indeed, modern media, such as *Breaking Bad*, *The Godfather*, *The Walking Dead*, *Charlie Wilson's War*, *House of Cards*, *Argo*, and *The Departed*, are replete with illustrations that teach Machiavelli's critical principles, including the need to caress or annihilate, learning "how not to be good," why it is better to be feared than loved, and how to act as both the lion and the fox. Modern media are used in this book to exemplify the tactics Machiavelli advocated and to comprehensively demonstrate that Machiavelli intended for government actors and those exercising power in other contexts to fight for a greater good and strive to achieve glory.

web light reflection and refraction light is a complex phenomena it exhibits both wave like and particle like properties its exact nature is not fully understood and this complexity makes it difficult for one model to describe all of light's properties as a result different models describe different aspects of light's behavior

web 692 reflection and refraction of light p25 9 a as measured from the diagram the incidence angle is 60 and the refraction angle is 35 from snell's law  $\sin \theta_1 / v_1 = \sin \theta_2 / v_2$  then  $\sin 35 / 60 = \sin \theta_2 / v_2$  and the speed of light in the block is 20 10 8 ms b the frequency of the light does not change upon refraction

web refraction is the bending of light it also happens with sound water and other waves as it passes from one transparent substance into another this bending by refraction makes it possible for us to have lenses magnifying glasses prisms and rainbows even our eyes depend upon this bending of light
