I will be educating/informing you on Computer Information Technology (IT). This book contains educational content about being a Computer Technician, which is also known as PC Technician, IT Technician, and IT Professional. This book can be used for reference as well, as it has many teachings, things that not only the reader could understand and make sense of this content, but even the average computer user could find helpful. To know a little bit about me, I was born on February 1st, 1997. I have ten plus years of experience in IT and have opened my own computer business. I am disabled and get very bored at times and want to use my expertise/skills and do something that I love and that is/will be productive. I will be educating/informing you on all that I know, or the majority of it, as some things you learn over time by having a career in the Information Technology field. You gain experience over time, which makes things become easier as time progresses, despite new challenges every day. My original intent was not to write a book, as all of the content in this book came from multiple documents that I have typed up over the years to help keep my mental health positive, and to hope maybe someone could find useful someday. I want to continue to use my computer expertise to not only make a living and to have a good life, not only personally, but doing what I love to do for work, IT. I like to help others when they are in need. I like to help others when they are in need, with anything if I can help them, but IT is what I enjoy helping people with the most. That is why I wrote this educational content to give even the slightest boost in the experience of not only existing IT professionals and experts, but to others seeking to learn as

well. I will be glad to answer any questions that you may have.

**CONVERGENCE EFFECT** Binh Nguyen, A while back I wrote a document called Building a Cloud Service. It was basically a document detailing my past experiences and details some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to media and IT convergence. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. I hope that this document will prove to be equally useful and will provide an insight not only to the current state of affairs but will provide a blueprint for those who may be entering the sector as well as those who may be using resources/services from this particular sector. Please note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations (as was the case with the “Cloud” document with several technologies) while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author. All trademarks and copyrights are the property of their owners, unless otherwise indicated. Use of a term in this document should not be regarded as affecting the validity of any trademark or service mark. The author would appreciate and consider it courteous if notification of any and all modifications, translations, and printed versions are sent to him. Please note that this is an organic document that will change as we learn more about this new computing paradigm. The latest copy of this document can be found either on the author’s website, blog, and/or <http://www.tldp.org>

**CLOUD AND INTERNET SECURITY** Binh Nguyen, A while back I wrote two documents called 'Building a Cloud Service' and the 'Convergence Report'. They basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. Personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome. The other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it’s quite simply not possible. Several of my past works (something such as this particular document takes a few weeks to a few months to write depending on how much spare time I have) were written in my spare time and between work and getting an education. If I had done a more complete job they would have taken years to write and by the time I had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date. Dare I say it, by the time that I have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents? I very

much see this document as a starting point rather than a complete reference for those who are interested in technology security. Note that the information contained in this document is not considered to be correct nor the only way in which to do things. It's a mere guide to how the way things are and how we can improve on them. Like my previous work, it should be considered a work in progress. Also, note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. No illicit activity (as far as I know and have researched) was conducted during the formulation of this particular document. All information was obtained only from publicly available resources and any information or concepts that are likely to be troubling has been redacted. Any relevant vulnerabilities or flaws that were found were reported to the relevant entities in question (months have passed). Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author. All trademarks and copyrights are the property of their owners, unless otherwise indicated. Use of a term in this document should not be regarded as affecting the validity of any trademark or service mark. The author would appreciate and consider it courteous if notification of any and all modifications, translations, and printed versions are sent to him. Please note that this is an organic document that will change as we learn more about this new computing paradigm. The latest copy of this document can be found either on the author's website, blog, and/or <http://www.tldp.org/>

**Webinar Authority** RD king, The Step-by-Step Guide on How to Prepare, Present, Host, and Execute a Successful Webinar! Webinars have become one of the most popular ways to promote a business in the past few years. They are so effective because they provide an immersiveness that other forums of media do not and attendees get real-time information delivered straight to them, not to mention the interactivity of question-and-answer sessions. According to the Adobe Software blog, webinars rank in the top three of the content delivery methods out there. If you are reading this book and have no idea what the word 'webinar' actually means, it is a method of communicating to a group via a specific platform, with the ability to share information with them like voice, text, slides, multimedia and more. Webinar is a play off of the word 'seminar' because that's what a webinar basically is - a seminar for the web. In order to use a webinar to promote your business, you are going to need to know the secrets to a successful webinar. This book is your guide to putting on a successful webinar, including emphasis on the most important concepts. According to SlideShare, the elements that engage 70% of people the most are interesting content and a passionate speaker. This book will help you become a passionate and engaging speaker, as well as develop your idea so that you can host the best webinar possible. In addition, we will be covering other concepts that are vital to webinars, such as the equipment that you will need, mastering Q&A's, working with co-organizers and hiring staff and much more. This book is divided into three sections. The first section will cover what you need to do before your webinar starts. The second is information you will need to start your webinar and things that happen during. Finally, the third section will cover what happens after your webinar is over and how you can begin preparing for the next one.
