Green IT - A Global Problem and an Imperative Business Opportunity Aamir Dawawala,2010-06-02 Doctoral Thesis / Dissertation from the year 2009 in the subject Organisation and Administration, grade: 60, University Of Wales Institute, Cardiff, language: English, abstract: Economic crisis and environmental sustainability are two major concerns the world is facing globally in recent times. Enterprises with their toughest times of economical survival need to pay attention on the environmental problem that is endangering existence. Although they are attempting to strongly hold their corporate social responsibility and aggressively planning Green Initiatives. But in this current time of crisis, unless an initiative does not satisfy their bottom line will have a short term consideration. The study attempts to highlight contemporary solution of Green IT which turns the climate change issue into an area of business opportunity. Typically Green IT adoption is associated as an investment towards acquiring energy efficient hardware devices in data centers to save

power and reduce carbon emissions. The paper uncovers Green IT approach of server consolidation; through which enterprises can achieve eco-efficiency that relates to controlling environmental impacts as well as reducing cost of operations. Server consolidation in data centers are proven in the study to be strongly correlated with cost saving business advantages. The correlation analysis done from the survey responses clarifies the general misconception that Green solutions are not always cost driven but can also be cost effective. Out of detailed interviews conducted for the research, it is evident that enterprises are at a slow pace to accept Green IT solutions in UAE as they are not entirely realizing the benefits it derives. Realization of benefits is ambiguous due to the lack of appropriate tools that can quantify benefits gained from implementing Green IT. For the same, the recommendation include a measurement model to signify and provide strong business case showing imperative cost saving values for Green IT approach. The model calculates total operational as well as environmental savings with Green solution implementation in data centers. To further streamline Green IT benefit realization, the study finally recommends Rapid Business Justification process by which organizations can evaluate how Green IT solutions can save power, save cost and ultimately save the environment. The process aims to measure business benefits of Green IT initiative and justify tangible economical value. With the implementation of the process, enterprises will be able to substantiate quantitative business benefits that will encourage adoption of Green solutions aggressively.

Green IT for Sustainable Business Practice Mark O'Neill, 2010 This book provides a full understanding of the importance of IT when trying to achieve an organization's green objectives. O'Neill gives the tools to create an action list which identifies and addresses green IT requirements.

Governance of Green IT George Spafford, 2008 This book's message has nothing to do with greenwash. It is intended for people who are looking for hard, practical advice on how to fix a problem. Green IT needs to establish baseline data so that progress can be effectively tracked, and metrics are essential for that. Taking Green IT seriously

also means coming up with a plan and making sure it gets delivered. So it is vital to treat Green IT as a process. You need to make the CIO responsible for the energy consumption of the data centre, and allow him to do what it takes to drive costs down. To retain momentum, your Green IT strategy also needs the support of top management. Meanwhile, lower down the hierarchy, employees need to know that Green IT is not just a fad, but something your company is treating as a real priority.

Green IT Engineering: Social, Business and Industrial Applications
Vyacheslav Kharchenko, Yuriy Kondratenko, Janusz Kacprzyk, 2018-09-29 This book describes the implementation of green IT in various human and industrial domains. Consisting of four sections: “Development and Optimization of Green IT”, “Modelling and Experiments with Green IT Systems”, “Industry and Transport Green IT Systems”, “Social, Educational and Business Aspects of Green IT”, it presents results in two areas – the green components, networks, cloud and IoT systems and infrastructures; and the industry, business, social and education domains. Green IT Engineering: Concepts, Models, Complex Systems Architectures
Vyacheslav Kharchenko, Yuriy Kondratenko, Janusz Kacprzyk, 2016-09-21 This volume provides a comprehensive state of

the art overview of a series of advanced trends and concepts that have recently been proposed in the area of green information technologies engineering as well as of design and development methodologies for models and complex systems architectures and their intelligent components. The contributions included in the volume have their roots in the authors' presentations, and vivid discussions that have followed the presentations, at a series of workshop and seminars held within the international TEMPUS-project GreenCo project in United Kingdom, Italy, Portugal, Sweden and the Ukraine, during 2013-2015 and at the 1st - 5th Workshops on Green and Safe Computing (GreenSCom) held in Russia, Slovakia and the Ukraine. The book presents a systematic exposition of research on principles, models, components and complex systems and a description of industry- and society-oriented aspects of the green IT engineering. A chapter-oriented structure has been adopted for this book following a "vertical view" of the green IT, from hardware (CPU and FPGA) and software components to complex industrial systems. The 15 chapters of the book are grouped into five sections: (1) Methodology and Principles of Green IT Engineering for Complex Systems, (2) Green Components and Programmable Systems, (3) Green Internet Computing, Cloud and Communication Systems, (4) Modeling and Assessment of Green Computer Systems and Infrastructures, and (5) Green PLC-Based Systems for Industry Applications. The chapters provide an easy to follow, comprehensive introduction to the topics that are addressed, including the most relevant references, so that anyone interested in them can start the study by being able to easily find an introduction to the topic through these references. At the same time, all of them correspond to different aspects of the work in progress being carried out by various research groups throughout the world and, therefore,

provide information on the state of the art of some of these topics, challenges and perspectives.

the field, Green IT: Technologies and Applications will serve as an excellent source of information on the latest technical trend of Green IT for graduate/undergraduate students, researchers, engineers, and engineering managers in the IT (Electrical, Communications, Computer Engineering, Computer Science, Information Science) as well as interdisciplinary areas such as sustainability, environment, and energy. The book comprises three parts: Green Communications, Green Computing, and Smart Grid and Applications. Part I Green Communications deals with energy efficient architectures and associated performance measures in wireless communications. It covers energy issues in PHY, MAC, Routing, Application layers and their solutions for a variety of networks. Part II Green Computing deals with various energy issues in data centers, computing clusters, computing storage, and associated optimization techniques. Energy management strategies are presented to balance between energy efficiency and required qualities of services. Part III Smart Grid and Applications presents an overview and research challenges for smart grid. Applications include modeling of urban pollutant for transportation networks, Wireless Sensor Network (WSN) architecture with long range radio, and Green IT standards.

Greening through IT Bill Tomlinson, 2012-02-10 How the tools of information technology can support environmental sustainability by tackling problems that span broad scales of time, space, and complexity. Environmental issues often span long periods of time, far-flung areas, and labyrinthine layers of complexity. In *Greening through IT*, Bill Tomlinson investigates how the tools and techniques of information technology (IT) can help us tackle environmental problems at such vast scales. Tomlinson describes theoretical, technological, and social aspects of a growing interdisciplinary approach to sustainability,

“Green IT,” offering both a human-centered framework for understanding Green IT systems and specific examples and case studies of Green IT in action. Tomlinson describes many efforts toward sustainability supported by IT—from fishers in India who maximized the sales potential of their catch by coordinating their activities with mobile phones to the installation of smart meters that optimize electricity use in California households—and offers three detailed studies of specific research projects that he and his colleagues have undertaken: EcoRaft, an interactive museum exhibit to help children learn principles of restoration ecology; Trackulous, a set of web-based tools with which people can chart their own environmental behavior; and GreenScanner, an online system that provides access to environmental-impact reports about consumer products. Taken together, these examples illustrate the significant environmental benefits that innovations in information technology can enable.

Sustainability, Green IT and Education Strategies in the Twenty-first Century Tomayess Issa, Pedro Isaias, Theodora Issa, 2017-07-26 This work presents and discusses the latest approaches and strategies for implementing Sustainability and Green IT into higher education and business environments. Following the global financial crisis in 2007/2008, businesses began to struggle coping with the increased IT/IS cost and their environmental footprint. As a consequence, action by universities to incorporate sustainability and ‘Green IT’ as parts of their teaching and learning materials, acknowledging their importance for global and local businesses, is being increasingly implemented. The book addresses the cooperation and coordination between academics and practitioners needed in order to achieve the changes required to obtain sustainability. Intended for researchers,

lecturers and post-graduate students, as well as professionals in the Information Society and ICT and education sectors, and policy makers.

HPC@Green IT Ralf Gruber, Vincent Keller, 2010-03-15 Making the most efficient use of computer systems has rapidly become a leading topic of interest for the computer industry and its customers alike. However, the focus of these discussions is often on single, isolated, and specific architectural and technological improvements for power reduction and conservation, while ignoring the fact that power efficiency as a ratio of performance to power consumption is equally influenced by performance improvements and architectural power reduction. Furthermore, efficiency can be influenced on all levels of today's system hierarchies from single cores all the way to distributed Grid environments. To improve execution and power efficiency requires progress in such diverse fields as program optimization, optimization of program scheduling, and power reduction of idling system components for all levels of the system hierarchy. Improving computer system efficiency requires improving system performance and reducing system power consumption. To research and reach reasonable conclusions about system performance we need to not only understand the architectures of our computer systems and the available array of code transformations for performance optimizations, but we also need to be able to express this understanding in performance models good enough to guide decisions about code optimizations for specific systems. This understanding is necessary on all levels of the system hierarchy from single cores to nodes to full high performance computing (HPC) systems, and eventually to Grid environments with multiple systems and resources.
