Resolving Land Disputes in East Asia Hualing Fu, John Gillespie, 2014-07-03 Economic development and mass urbanization have unleashed unprecedented levels of land disputes in East Asia. In China and Vietnam especially, courts and other legal institutions struggle to find lasting solutions. It is against this background of legal failure that this book brings together leading scholars to understand how state agencies, land users and land developers imaginatively engage with each other to resolve disputes. Drawing on empirically rich case studies, contributors explore the limits of law and legal institutions in resolving land disputes and reveal insights into how key actors in East Asia understand land disputes. Their studies reveal promising dispute resolution practices and point to the likely ways that states will deal with land disputes in the future.

Natural Products Chemistry III T.I. Atta-ur-Rahman, Philip W. Le Quesne, 2012-12-06 Natural product chemistry has undergone an explosive

growth during the latter half of the current century. This has been brought about by a number of factors. One of these has been the growing number of substances from natural sources which display interesting pharmacological activities. These include antibiotics, anti-tumor agents, immunostimulants, drugs affecting the cardiovascular and central nervous systems, analgesics etc. Another factor has been the improvements made in the technology of isolation processes which includes the development of such techniques as high pressure liquid chromatography which has allowed the rapid isolation of substances which were previously difficult to obtain by classical procedures. The most important factor has been the development of new spectroscopic techniques which have opened up whole new vistas in this exciting field. Prominent in these advances has been the advent of powerful superconducting magnets with very stable magnetic fields, and pulse NMR in which the duration, direction and phases of pulses can be accurately controlled by means of mini computers. These have heralded the advent of two-dimensional NMR spectroscopy which has now come to be routinely employed in unravelling complex structures. No less important, though somewhat less dramatic, have been the advances made in the field of mass spectroscopy where new ionization techniques such as positive and negative fast atom bombardment, field desorption, chemical ionization etc. have allowed the mass spectra of larger non-volatile substances to be recorded. The field of organic synthesis has seen equally rapid advances.

Evaluating Office Lighting Environments ,1989

Data from a post-occupancy evaluation (POE) of 912 work stations with lighting power density (LPD), photometric, and occupant response measures were examined in a detailed, second-level analysis. Seven types of lighting systems were identified with different combinations of direct and indirect ambient lighting, and task lighting and daylight. The mean illuminances, with body shadow, at the primary task location were within the IES target values for office tasks with a range of mean illuminances from 32 to 75 fc, depending on the lighting system. The median LPD was about 2.36 W/sq.ft, with about one-third the work stations having LPD's at or below 2.0 W/sq.ft. Although a majority of the occupants (69%) were satisfied about their lighting, the highest percentage of those expressing dissatisfaction (37%) with lighting had an indirect fluorescent furniture mounted (IFFM) system. The negative reaction of so many people to the IFFM system suggests that the combination of task lighting with an indirect ambient lighting system had an important influence on lighting satisfaction, even though task illuminances tended to be higher with the IFFM system. Concepts of lighting quality, visual health, and control were explored, as well as average luminance to explain the negative reactions to the combination of indirect lighting with furniture mounted lighting.

Security, Privacy, and Anonymity in Computation, Communication, and Storage Guojun Wang,Bing Chen,Wei Li,Roberto Di Pietro,Xuefeng Yan,Hao Han,2021-02-06 This book constitutes seven

refereed workshops and symposiums, SpaCCS Workshops 2020, which are held jointly with the 13th International Conference on Security, Privacy, and Anonymity in Computation, Communication, and Storage, SpaCCS 2020, in Nanjing, China, in December 2020. The 48 papers were carefully reviewed and selected from 131 submissions and cover a broad range of topics on security, privacy and anonymity in computation communication, and storage, including the 11th International Workshop on Trust, Security and Privacy for Big Data (TrustData 2020), the 10th International Symposium on Trust, Security and Privacy for Emerging Applications (TSP 2020), the 9th International Symposium on Security and Privacy on Internet of Things (SPIoT 2020), the 6th International Symposium on Sensor-Cloud Systems (SCS 2020), the Second International Workshop on Communication, Computing, Informatics and Security (CCIS 2020), the First International Workshop on Intelligence and Security in Next Generation Networks (ISNGN 2020), the First International Symposium on Emerging Information Security and Applications (EISA 2020).

KNOW WHY: Systems Thinking and Modeling Kai Neumann, 2015-07-03 The complexity of the challenges we are faced with is steadily growing. Our gut feeling cannot predict the future and best practices used in the past do not necessarily work for our individual situations in the present. These facts cause many of us to simply give up. In order to be successful, however, we must understand the interconnections and dynamics at work in these individual situations. With KNOW WHY

Thinking and the KNOW WHY Method, Kai Neumann offers two extremely practical approaches with which to handle the complex challenges we encounter in business, in politics and in our personal lives. KNOW WHY Thinking simply asks that we consider the evolutionary pattern of success. The KNOW WHY Method then applies this when we engage in qualitative modeling using what is arguably the most important software in the world – the iMODELER. This book shows you what KNOW WHY is all about and provides you with modeling tips so that you can easily model the following: 1. Personal life: What are the drivers for human happiness? How can we consciously plan to do the things that unconsciously make us feel great? What role do e.g. partners, money, sex, sports, work, nutrition, religion, hormones, products and consciousness play? 2. Management: Why is a product, a company or enterprise, a team, a project, or an employee successful? Why do customers buy certain products? Modeling explains systemic strategy development, project management, marketing, change management, organizational development, and much more. 3. Politics and society: Why aren't we changing although it is quite clear what needs to change? Wars, poverty, pollution, financial crises, climate change, etc., are easily explained with the help of KNOW WHY. The solutions to our challenges may ultimately not be all that easy, but we can begin to get a handle on them with KNOW WHY Thinking and by modeling.

Red Hat® Certified Technician & Engineer (RHCT and RHCE) Training Guide and Administrator's Reference Asghar Ghorri, 2009-08-10 This book is based on Red Hat® Enterprise Linux 5 (RHEL 5) and is intended for individuals who plan to take the new Red Hat® Certified Technician (RH202) and/or Red Hat® Certified Engineer (RH302) exams and pass them, want to use it as a quick on-the-job resource or like to learn RHEL from the beginning in an easy-to-understand way. The book has 31 chapters and facilitates readers to grasp concepts, understand implementation procedures, learn command syntax, configuration files and daemons involved, and comprehend troubleshooting. The chapters are divided into four areas: Linux Essentials, RHEL System Administration, RHEL Network and Security Administration, and RHEL Troubleshooting. 01. Linux Essentials (Chapters 1 to 7) covers the basics of Linux. Information provided includes general Linux concepts, basic commands, file manipulation and file security techniques, text file editors, shell features, basic shell and awk programming and other essential topics. These chapters are good for gaining an overall understanding of Linux and cover common skills useful for both exams. 02. RHEL System Administration (Chapters 8 to 19) covers system administration concepts and topics including hardware management, local installation, X Window and desktop managers, software and

user/group account administration, disk partitioning using standard, RAID and LVM, file system and swap management, system shutdown and boot procedures, kernel management, backup, restore and compression functions, print services administration, and automation and system logging. These chapters cover objectives outlined for the RH202 exam.

03. RHEL Network and Security Administration (Chapters 20 to 30) covers network and security administration concepts and topics such as OSI and TCP/IP reference models, subnetting and IP aliasing, network interface administration, routing, basic network testing and troubleshooting tools, naming services (DNS, NIS, LDAP) and DHCP; Internet services and electronic mail management, time synchronization with NTP, resource sharing with NFS, AutoFS and Samba, network-based and hands-free automated installation, Apache web server and Squid caching/proxy server, secure shell, PAM, TCP Wrappers, IPTables, NATting, SELinux and recommendations for system hardening. Measure Theory and Filtering Lakhdar

Aggoun, Robert J. Elliott, 2004-09-13 The estimation of noisily observed states from a sequence of data has traditionally incorporated ideas from Hilbert spaces and calculus-based probability theory. As conditional expectation is the key concept, the correct setting for filtering theory is that of a probability space. Graduate engineers, mathematicians and those working in quantitative finance wishing to use filtering techniques will find in the first half of this book an accessible introduction to measure theory, stochastic calculus, and stochastic processes, with particular emphasis on martingales and Brownian motion. Exercises are included. The book then provides an excellent users' guide to filtering: basic theory is followed by a thorough treatment of Kalman filtering, including recent results which extend the Kalman filter to provide parameter estimates. These ideas are then applied to problems arising in finance, genetics and population modelling in three separate chapters, making this a comprehensive resource for both practitioners and researchers.

Principles of Agronomy for Sustainable Agriculture Francisco J. Villalobos, Elias Fereres, 2017-01-25 This textbook explains the various aspects of sustainable agricultures to undergraduate and graduate students. The book first quantifies the components of the crop energy balance, i.e. the partitioning of net radiation, and their effect on the thermal environment of the

canopy. The soil water balance and the quantification of its main component (evapotranspiration) are studied to determine the availability of water to rain fed crops and to calculate crop water requirements. Then it sets the limitations of crop production in relation to crop phenology, radiation interception and resource availability (e.g. nutrients). With that in mind the different agricultural techniques (sowing, tillage, irrigation, fertilization, harvest, application of pesticides, etc.) are analyzed with special emphasis in quantifying the inputs (sowing rates, fertilizer amounts, irrigation schedules, tillage plans) required for a given target yield under specific environmental conditions (soil & climate). For all techniques strategies are provided for improving the ratio productivity/resource use while ensuring sustainability. The book comes with online practical focusing on the key aspects of management in a crop rotation (collecting weather data, calculating productivity, sowing rates, irrigation programs, fertilizers rates etc).
