Studies of CP-Violation in Charmless Three-Body b-Hadron Decays Daniel O'Hanlon, 2018-11-02 This book highlights two essential analyses of data collected during the LHCb experiment, based on the Large Hadron Collider at CERN. The first comprises the first observation and studies of matter-antimatter asymmetries in two three-body b-baryon decays, paving the way for more precise measurements of the relatively unknown decay properties of b-baryon decays. The second is an analysis of a charged B meson decay to three charged pions, where previously large matter-antimatter asymmetries were observed in a model-independent analysis. Here a model of the decay amplitude is constructed using the unitarity-conserving 'K-matrix' model for the scalar contributions, so as to gain an understanding of how the previously observed matter-antimatter asymmetries arise; further, the model's construction yields the most precise and comprehensive study of this decay mode to date.

Keeping Track Anne E. Green, Malcolm J. Maguire, Angela Canny, 2001 In the context of policy concerns regarding social exclusion, a range of agencies has collected information on, and delivered services for, 'vulnerable' young people. Technological developments enhance possibilities of linking information from different sources to 'map' and 'track' young people as they move between agencies and their activity status changes. This report outlines some of the advantages and limitations of 'mapping' and 'tracking' methodologies. It identifies examples of good practice and difficulties which agencies have encountered in building reliable, accurate, up-to-date and robust systems. Particular attention is paid to issues relating to resources, partnership working, data protection and information technology. Keeping track: traces the changing nature of youth transitions; explores the concepts of 'mapping' and 'tracking'; outlines the results of a survey of activities of careers service companies; presents pen portraits of a number of local tracking projects and discusses key issues emerging.- vbTab]This report is important reading for policy makers, practitioners and researchers concerned with social exclusion and the delivery of services to young people. It is of particular relevance to those working in careers services, local authorities, the voluntary sector and others engaging in partnership at local level.

Among the topics and areas covered are a broad spectrum of theoretical aspects, applications in various fields, sensory processing, cognitive science and AI, implementations, and neurobiology.

American Dirt Track Racer Joe Scalzo, One of the most evocative eras in the history of American motorsport was the golden age of dirt-track racing, when hairy-knuckled drivers duked it out in open-wheel racers on half-mile ovals around the country. This photographic history spans the classic era from 1946 to 1970, featuring vintage photography of the Champ and Sprint cars that were driven by men like A.J. Foyt, Parnelli Jones, Roger Ward and Bobby Unser for very little monetary reward. The technologies of the most successful and unusual cars are discussed as are specific races, circuits and some of the more colorful personalities of the period. Midget and track roadsters are also featured, along with period color photography.

First Observation of Fully Reconstructed B⁰ and B_s⁰ Decays into Final States Involving an Excited Neutral Charm Meson in LHCb Arnau Brossa Gonzalo, 2023-01-31 This book presents the latest results on the branching fraction and phase space distribution of B⁰ and B_s⁰ decays into final states including excited neutral charm mesons. This work represents four years of research, and the book describes in detail all the necessary steps and techniques required to perform a physics analysis of the data recorded by the LHCb experiment in the years 2016-2018. Although the results presented in this book represent the first measurement of such decays, the text is written in a manner accessible to Ph.D. students and early career researchers. Thus, all the contents included in this book are described in a pedagogical way, including technical details that would allow the results to be reproduced in future. In addition to the methodology used to perform these measurements, the book also includes a description of the theoretical background required to interpret the results presented, as well as a technical description of the LHCb detector, which provided the data sample used in this study.

Advanced Concepts for Intelligent Vision Systems Jacques Blanc-Talon, Cosimo Distanto, Wilfried Philips, Dan Popescu, Paul Scheunders, 2016-10-20 This book constitutes the refereed proceedings of the 17th International Conference on Advanced Concepts for Intelligent Vision Systems, ACIVS 2016, held in Lecce, Italy, in October 2016. The 64 revised full papers presented in this volume were carefully selected from 137 submissions. They deal with classical low-level image processing techniques; image and video compression; 3D; security and forensics; and evaluation methodologies.

Highly Mutable Animal RNA Viruses: Adaptation and Evolution Akio Adachi,Masako Nomaguchi,2017-11-30 Viruses are widely present in nature, and numerous viral species with a variety of unique characteristics have been identified so far. Even now, new emerging or re-emerging viruses are being found or re-found as novel viral classes or as quasi-species. Indeed, viruses are everywhere. Of note, viruses are pivotal as targets and tools of basic and applied sciences. On one hand, portions of the viruses are infectious for animals including humans, and cause various diseases in infected hosts by distinct mechanisms and at a different level of severity. While many of viruses are known to co-exist quietly with their hosts, pathogenic viruses certainly affect and threaten our society as well as individuals to provoke serious medical or economic attention. We should act against certain dreadful and highly infectious viruses as a global problem. Animal RNA viruses can readily mutate to adapt themselves in their hostile environments for their survival. Resultant viruses may sometimes show essentially altered phenotypes from the original parental strains. This fundamental and general property of animal RNA viruses represents major extensive issues of scientific, medical, and/or economic importance. In this Research Topic, we have focused on the high mutability of animal RNA viruses, and selected relevant articles on animal viruses of broad-ranges such as primate lentiviruses, influenza viruses, paramyxoviruses, flaviviruses, rabies virus, norovirus, picornaviruses, and picobirnavirus. Each article has taken up intriguing aspects of the subject viruses. We are sure that readers acquire important information on virus mutation, adaptation, diversification, and evolution, and hope that researchers in the field related to virology gain some solid hints from the reported articles for further virological and /or medical studies. Finally, we thank all the contributing researchers in this Research Topic, entitled "Highly Mutable Animal RNA Viruses: Adaptation and Evolution", for their elegant and interesting works.

Astroparticle, Particle, Space Physics and Detectors for Physics Applications S. Giani,2012 The exploration of the subnuclear world is done through increasingly complex experiments covering a wide range of energy and performed in a large variety of environments ranging from particle accelerators, underground detectors to satellites and the space laboratory. Among recent advances one has to indicate, for instance, first results obtained from space and LHC experiments and progress done in preparation of the latter experiments upgrades, including plans for the LHC machine upgrade. The achievement of these research programs calls for novel techniques, new materials and instrumentation to be used in detectors, often of large scale. Therefore, fundamental physics is at the forefront of technological advance and also leads to many applications. Among these, medical applications have a particular importance due to health and social benefits they bring to the public. Sample Chapter(s). Science highlights from the Fenni Observatory (5,046 KB). Contents: Space Experiments and Cosmic Rays Observations; Production and Propagation of Cosmic Rays in the Galaxy and Heliosphere; Dark Matter Searches, Underwater and Underground Experiments; High Energy Physics Experiments; Tracker and Position Sensitive Detectors; Calorimetry; Advanced Detectors, Particles Identification, Devices and Materials in Radiation; Broader Impact Activities, Treatments and Software Application. Readership: Post-graduate students, researchers and engineers.

Albuquerque Meeting - Proceedings Of The 8th Meeting Division Of Particles And Fields Of The American Physical Society (In 2 Volumes) Sally Seidel,1995-07-05 This book presents the latest results from high energy physics laboratories. Network Optimization Panos M. Pardalos,Donald W. Hearn,William W. Hager,2012-12-06 Network optimization is important in the modeling of problems and processes from such fields as engineering, computer science, operations research, transportation, telecommunication, decision support systems, manufacturing, and airline scheduling. Recent advances in data structures, computer technology, and algorithm development have made it possible to solve classes of network optimization problems that until recently were intractable. The refereed papers in this volume reflect the interdisciplinary efforts of a large group of scientists from academia and industry to model and solve complicated large-scale network optimization problems.

Top Quark Physics at Hadron Colliders Arnulf Quadt,2007-08-16 This will be a required acquisition text for academic libraries. More than ten years after its discovery, still relatively little is known about the top quark, the heaviest known elementary particle. This extensive survey summarizes and reviews top-quark physics based on the precision measurements at the Fermilab Tevatron Collider, as well as examining in detail the sensitivity of these experiments to new physics. Finally, the author provides an overview of top quark physics at the Large Hadron Collider.

The Jan & Dean Record Mark A. Moore,2016-02-18 Jan & Dean were among the most successful artists of the late 1950s through the mid-1960s, with hits including Baby Talk, Surf City, Dead Man's Curve and The Little Old Lady (From Pasadena). Slapstick humor and offbeat personas were a big part of their shtick, but Jan Berry was serious when it came to the studio. This book chronicles Jan's career as a songwriter and arranger--and his tenure as producer for Jan & Dean and other acts--with day-by-day entries detailing recording sessions, single and album releases, concerts and appearances, film and television projects, behind-the-scenes business and legal matters, chart positions and more. Extensive commentary from Berry's family, friends and colleagues is included. Studio invoices, contract details, tape box notes, copyright information and other particulars shed light on how music was made in the Hollywood studio system of the 1960s.
