5G System Design Wan Lei,Anthony C.K. Soong,Liu Jianghua,Wu Yong,Brian Classon,Weimin Xiao,David Mazzarese,Zhao Yang,Tony Saboorian,2019-09-09 This book presents a detailed pedagogical description of the 5G commercial wireless communication system design, from an end to end perspective. It compares and contrasts NR with LTE, and gives a concise and highly accessible description of the key technologies in the 5G physical layer, radio access network layer protocols and procedures. This book also illustrates how the 5G core and EPC is integrated into the radio access network, how virtualization and edge computer fundamentally change the way users interact with the network, as well as 5G spectrum issues. This book is structured into six chapters. The first chapter reviews the use cases, requirements, and standardization organization and activities for 5G. These are 5G requirements and not NR specifically, as technology that meets the requirements, may be submitted to the ITU as 5G technology. This includes a set of Radio Access Technologies (RATs), consisting of NR and LTE; with each RAT meeting different aspects of the requirements. The second chapter describes the air interface of NR and LTE side by side. The basic aspects of LTE that NR builds upon are first described, followed by sections on the NR specific technologies, such as carrier/channel, spectrum/duplexing (including SUL), LTE/NR co-existence and new physical layer technologies (including waveform, Polar/LDPC codes, MIMO, and URLLC/mMTC). In all cases the enhancements made relative to LTE are made apparent. The third chapter contains descriptions of NR procedures (IAM/Beam Management/Power control/HARQ), protocols (CP/UP/mobility, including grant-free), and RAN architecture. The fourth chapter includes a detailed discussion related to end-to-end system architecture, and the 5G Core (5GC), network slicing, service continuity, relation to EPC, network virtualization, and edge computing. The fifth and major chapter describes the ITU submission and how NR and LTE meet the 5G requirements in significant detail, from the rapporteur responsible for leading the preparation and evaluation, as well as some field trial results. Engineers, computer scientists and professionals with a passing knowledge of 4G LTE and a comprehensive understanding of the end to end 5G commercial wireless system will find this book to be a valuable asset. Advanced-level students and researchers studying and working in communication engineering, who want to gain an understanding of the 5G system (as well as methodologies to evaluate features and technologies intended to supplement 5G) will also find this book to be a valuable resource.

Access Control in Data Management Systems Elena Ferrari,2010 This book provides an overview of the various developments in access control for data management systems. Currents of Archival Thinking Heather MacNeil,Terry Eastwood,2017-01-09 With new technologies and additional goals driving their institutions, archives are changing drastically. This book shows how the foundations of archival practice can be brought forward to adapt to new environments—while adhering to the key principles of preservation and access. Archives of all types are experiencing a resurgence, evolving to meet new environments (digital and physical) and new priorities. To meet those changes, professional archivist education programs—now one of the more active segments of LIS schools—are proliferating as well. This book identifies core archival theories and approaches and how those interact with major issues and trends in the field. The essays explore the progression of archival thinking today, discussing the nature of archives in light of present-day roles for archivists and archival institutions in the preservation of documentary heritage. Examining new conceptualizations and emerging frameworks through the lenses of core archival practice and theory, the book covers core foundational topics, such as the nature of

archives, the ruling concept of provenance, and the principal functions of archivists, discussing each in the context of current and future environments and priorities. Several new essays on topics of central importance not treated in the first edition are included, such as digital preservation and the influence of new technologies on institutional programs that facilitate archival access, advocacy, and outreach; the changing legal context of archives and archival work; and the archival collections of private persons and organizations. Readers will also learn how communities of various kinds intersect with the archival mission and how other disciplines' perspectives on archives can open new avenues.
