**Categories, Constructions, and Change in English Syntax** Nuria Yáñez-Bouza, Emma Moore, Linda van Bergen, Willem B. Hollmann, 2022-06-09 A pioneering collection of new research that explores categories, constructions, and change in the syntax of the English language. The volume, with contributions by world-renowned scholars as well as some emerging scholars in the field, covers a wide variety of approaches to grammatical categories and categorial change, constructions and constructional change, and comparative and typological research. Each of the fourteen chapters, based on the analysis of authentic data, highlights the wealth and breadth of the study of English syntax (including morphosyntax), both theoretically and empirically, from Old English through to the present day. The result is a body of research which will add substantially to the current study of the syntax of the English language, by stimulating further research in the field.

**Analysis and Synthesis of Nonlinear Control Systems** Miguel Bernal, Antonio

Sala,Zsófia Lendek,Thierry Marie Guerra,2022-02-05 This book presents a modern perspective on the modelling, analysis, and synthesis ideas behind convex-optimisation-based control of nonlinear systems: it embeds them in models with convex structures. Analysis and Synthesis of Nonlinear Control Systems begins with an introduction to the topic and a discussion of the problems to be solved. It then explores modelling via convex structures, including quasi-linear parameter-varying, Takagi–Sugeno models, and linear fractional transformation structures. The authors cover stability analysis, addressing Lyapunov functions and the stability of polynomial models, as well as the performance and robustness of the models. With detailed examples, simulations, and programming code, this book will be useful to instructors, researchers, and graduate students interested in nonlinear control systems.
