Metamodelling Peter Gawthrop,Lorcan Smith,1996 With the increasing complexity of processes to be analyzed, the modern control engineer often needs to

develop a model of the system to be controlled. However, in many cases, there is limited time for detailed system analysis, and the engineer may not be an expert in that particular domain. This work takes an engineering approach to bond graph modelling of dynamic systems, and provides an in-depth study of causality in the context of physical system modelling.

Advances in Inflammatory Bowel Diseases P. Rutgeerts, J-F. Colombel, S.B. Hanauer, J. Schölmerich, Guido Tytgat, A. van Gossum, 1998-12-31 Ulcerative colitis and Crohn's disease remain a great therapeutic challenge to the medical community. In recent years knowledge about the pathogenesis of these diseases has progressed rapidly but the cause of the diseases remains completely unknown. It has become clear that dysregulation of the mucosal immune system is the basis for the chronic evolution of the diseases in a genetically susceptible population. Exciting new therapeutic approaches have been attempted in the last couple of years and cytokine and anti-cytokine treatments in particular seem very promising, especially in intractable disease. The format of the Falk Symposium 106 on 'Advances in Inflammatory Bowel Diseases', held in Brussels, Belgium, June 18-20, 1998, was somewhat innovative as each session attempted to link the new insights into pathogenetic mechanisms with new therapeutic approaches, resulting in optimal information transfer. The classic therapeutic schemes were updated with a special focus on step-wise build-up of therapy.

Somatoform and Other Psychosomatic Disorders Christos Charis, Georgia Panayiotou, 2018-07-23 This intriguing volume presents the most contemporary views on the conceptualization and treatment of somatoform disorders and related conditions from experts in psychodynamic and cognitive behavioral approaches. It does so with respect to both perspectives, without advocating for either approach. By presenting expert views from diverse perspectives, the book raises, what is a central point in most of the chapters, that emotion, its processing and regulation, is a cornerstone of these disorders. The volume also highlights the role of pathogenic coping or defense mechanisms like dysfunctional avoidance (from a CBT perspective) and conversion (from the

psychodynamic perspective) in the maintenance of psychosomatic symptoms. The volume's contents include detailed literature reviews on the most common—and most treatment-resistant—mind/body conditions, including chronic pain, responses to trauma, alexithymia, and the spectrum of health anxiety disorders. Noted experts distinguish between types of medically unexplained symptoms, discuss their complex processes, and provide models for intervention where cognitive-behavioral or psychodynamic approaches may be appropriate or effective. And a fascinating case study of a patient presenting multiple trauma-related disorders explores therapist resourcefulness over a course of shifting symptoms and frustrating setbacks. Among the topics covered: Maintaining mechanisms of health anxiety: current state of knowledge. Negative affect and medically unexplained symptoms. Alexithymia as a core trait in psychosomatic and other psychological disorders. Trauma and its consequences for body and mind. Embodied memories, a new pathway to the unconscious. Psychotherapy among HIV patients: a look at a psychoimmunological research study after 20 years. Health anxiety: a cognitive-behavioral framework. The wealth of options discussed in Somatoform and Psychosomatic Disorders offers health psychologists, psychiatrists, psychotherapists, counselors, and psychoanalysts bold new ideas for case formulation, treatment planning, and intervention with some of their most intractable cases.
