Vanadium Compounds: Biochemical and Therapeutic Applications Ashok K. Srivastava, Jean-Louis Chiasson, 2012-12-06 The papers in this volume comprise invited reviews as well as original research papers presented at the Vanadium Symposium held July 29-31, 1994. Vanadium is a trace element and its compounds have been shown to exert a wide variety of insulin-like effects including the ability to lower hyperglycemia in several experimental models of diabetes mellitus. Because of the possibility that vanadium compounds may be able to serve as potential therapeutic agents for the treatment of diabetes, and possibly other diseases, this trace element has attracted the attention of biomedical researchers from a variety of fields. The Vanadium Symposium 1994 was therefore organized to facilitate exchange of ideas and increase interaction among researchers of different disciplines actively engaged in studying the biological actions of vanadium compounds. The papers are written by leading vanadium researchers and are grouped into three main sections: the chemistry, biochemical and physiological aspects, and potential therapeutic use and toxic effects of vanadium compounds. A good source of information on vanadium chemistry and biology.

Traditional Forest-Related Knowledge John A. Parrotta, Ronald L. Trosper, 2011-10-14 Exploring a topic of vital and ongoing importance, Traditional Forest Knowledge examines the history, current status and trends in the development and application of traditional forest knowledge by local and indigenous communities worldwide. It considers the interplay between traditional beliefs and practices and formal forest science and interrogates the often uneasy relationship between these different knowledge systems. The contents also highlight efforts to conserve and promote traditional forest management practices that balance the environmental, economic and social objectives of forest management. It places these efforts in the context of recent trends towards the devolution of forest management authority in many parts of the world. The book includes regional chapters covering North America, South America, Africa, Europe, Asia and the Australia-Pacific region. As well as relating the general factors mentioned above to these specific areas, these chapters cover issues of special regional significance, such as the importance of traditional knowledge and practices for food security, economic development and cultural identity. Other chapters examine topics ranging from key policy issues to the significant programs of regional and international organisations, and from research ethics and best practices for scientific study of traditional knowledge to the adaptation of traditional forest knowledge to climate change and globalisation.

Enzyme Induction and Modulation V.A. Najjar, 1983-04-30 In addition to performing its prime function as a vehicle for scientific communications of varied colorations, Molecular and Cellular Biochemistry is again focusing on two subjects which it treats in depth. One of these is a book issue dealing with the transglutaminase reaction. The other is this issue that deals with induction and modulation of enzymes. This is a very broad subject that calls for broader coverage than could be included in one book issue. However, I have elected to include only certain contributions that serve as general examples of the principles involved. There are six articles on enzyme regulation in hepatocyte culture. These include arginase and argino-succinate synthetase, γ -glutamyl transferase and plasminogen activator. Other regulatory enzymes that are discussed are protein kinases, 2,3-bisphosphoglycerate synthetases, carbamoyl phosphate synthetase, heme oxygenase, cytochrome P-450, tyrosine hydroxylase, fatty acid synthetase, acetyl coA carboxylase, among others. Also included is the regulation of several enzyme messengers RNAs. As in the past, subscribers to the journal will receive this double volume as a continuation of regular issues of the journal Molecular and Cellular Biochemistry. This double volume will also be available separately in the form of a book issue to interested readers through Martinus Nijhoff Publishers. v.A. Cocktails on Tap Jacob Grier, 2015-03-24 The next great ingredient in the craft cocktail revolution has arrived: craft beer. Bartender and cocktail consultant Jacob Grier offers up more than fifty thirst-quenching concoctions featuring beer. Long considered a beverage best enjoyed on its own, beer has now become a favorite ingredient for top bartenders around the world. In Cocktails on Tap, Grier collects the best of these contemporary creations alongside forgotten classics. While the Mai Ta-IPA adds a refreshing note to a tropical favorite, the Green Devil boosts a powerful Belgian beer with gin and a rinse of absinthe. In Cocktails on Tap, the vast range of today's beers, from basic lagers to roasty stouts and sour Belgian ales, is shaken up for mixologists looking to add some spice—and hop—to their repertoire. "Grier is a masterful guide through the wickedly creative terrain of beer cocktails, offering not just delightful recipes, but history and cultural commentary, too. Connoisseurs and neophytes alike will find much to savor, and the latter will appreciate Jacob's tutelage in cocktail basics. Grab a copy and start mixing!" —Maureen Ogle, author of Ambitious Brew: The Story of American

Beer “Jacob Grier was at the forefront of the beer cocktail renaissance before many of us had ever contemplated the idea of a beer cocktail. His vast knowledge of beer and passionate dedication to this area of mixology is certain to push the craft of cocktails forward in a positive new direction.”
