Making Library Web Sites Usable Tom Lehman,Terry Nikkel,2008 If your library's website is not as user-friendly as it could or should be, you need this book. A LITA guide, it is the most authoritative, current reference on usability testing for libraries. It gives you practical advice in clear, non-technical prose, plus success stories from 18 academic, public, corporate, and government libraries. Read it and you will learn what usability assessments are, why they are important for libraries, why you should do them regularly, and what the most common challenges are. You will also learn all of the necessary how-tos, whats, and whys for the most common assessment techniques and how to interpret your results, document findings, and effectively communicate results and recommendations. Usability-in-action success stories from Purdue, the University of Virginia, and Wright State University libraries; the Clinton Macomb Public Library in Michigan; the MITRE corporate library; and the library at NASA Goddard offer rare insights and practical advice for facing challenges like limited time, working within a budget, and rallying support for website changes. For library webmasters, members of library Web or usability teams, and library administrators committed to putting their patrons at the center of their website design strategy but unsure of how to begin

Image and Signal Processing Abderrahim Elmoataz,Olivier Lezoray,Fathallah Nouboud,Driss Mammass,2014-06-04 This book constitutes the refereed proceedings of the 6th International Conference, ICISP 2014, held in June/July 2014 in Cherbourg, France. **Artificial Intelligence and Online Engineering** Michael E. Auer,Samir A. El-Seoud,Omar H. Karam,2022-10-14 Nowadays, online technologies are the core of most fields of engineering and the whole society and are inseparable connected for example with Internet of Things & Industrial Internet of Things (Industry 4.0), Online & Biomedical Engineering, Data Science, Machine Learning, and Artificial Intelligence, Cross & Mixed Reality, and Remote Working Environments. to name only a few. Since the first REV conference in 2004, we tried to focus on the upcoming use of the Internet for engineering tasks and the opportunities as well as challenges around it. Consequently, the motto of this year's REV2022 was "Artificial Intelligence and Online Engineering". In a globally connected world, the interest in online collaboration, teleworking, remote services, and other digital working environments is rapidly increasing. In response to that, the general objective of this conference is to contribute and discuss fundamentals, applications, and experiences in the field of Online and Remote Engineering, Virtual Instrumentation and other related new technologies like Cross Reality, Data Science & Big Data, Internet of Things & Industrial Internet of Things, Industry 4.0, Cyber-Security, and M2M & Smart Objects. Another objective of the conference is to discuss guidelines and new concepts for engineering education in higher and vocational education institutions, including emerging technologies in learning, MOOCs & MOOLs, and Open Resources. REV2022 was the 19th in a series of annual events concerning the area of Online Engineering. It has been organized in cooperation with The British University in Egypt (BUE), Cairo, as a hybrid event from February 28 until March 02, 2022.

Air Pollution Nineteen C. A. Brebbia,2011 Air Pollution is widespread and a growing challenge to the international community, with clear known impacts on local and global

health and the environment. Governments face a need to balance concern over these impacts with maintaining or improving economic development. Science is the key to identifying the nature and scale of air pollution impacts and is essential in the formulation of effective policies and regulations. Our knowledge of the fundamental science of air pollution and its application continued to improve, enabling us to better predict, assess and mitigate the air pollution implications to local, regional, national and international economic systems. This book contains papers presented at the nineteenth in the successful series of annual International Conferences dealing with Modelling, Monitoring and Management of Air Pollution. The papers deal with advances in a wide variety of topics, including: Air Pollution Modelling; Air Quality Management; Emission Studies; Monitoring and Measuring; Aerosols and Particles; Atmospheric Chemistry; Indoor Air Pollution; Policy Studies; Climate Change and Air Pollution; Regional and Global Studies; Exposure and Health Effects; Rural Pollution Studies; Air Pollution Effects on Ecosystems; Air Pollution Mitigation; Case Studies.

**Archives and the Digital Library** William E. Landis, Robin L. Chandler, 2013-05-13  
Technological advances and innovative perspectives constantly evolve the notion of what makes up a digital library. Archives and the Digital Library provides an insightful snapshot of the current state of archiving in the digital realm. Respected experts in library and information science present the latest research results and illuminating case studies to provide a comprehensive glimpse at the theory, technological advances, and unique approaches to digital information management as it now stands. The book focuses on digitally reformatted surrogates of non-digital textual and graphic materials from archival collections, exploring the roles archivists can play in broadening the scope of digitization efforts through creatively developing policies, procedures, and tools to effectively manage digital content. Many of the important advances in digitization of materials have little to do with the efforts of archivists. Archives and the Digital Library concentrates specifically on the developments in the world of archives and the digitization of the unique content of information resources archivists deal with on a constant basis. This resource reviews the current issues and challenges, effective user assessment techniques, various digital resources projects, collaboration strategies, and helpful best practices. The book is extensively referenced and includes helpful illustrative figures. Topics in Archives and the Digital Library include: a case study of LSTA-grant funded California Local History Digital Resources Project expanding the scope of traditional archival digitations projects beyond the limits of a single institution a case study of the California Cultures Project the top ten themes in usability issues case studies of usability studies, focus groups, interviews, ethnographic studies, and web log analysis developing a reciprocal partnership with a digital library the technical challenges in harvesting and managing Web archives metadata strategies to provide descriptive, technical, and preservation related information about archived Web sites long-term preservation of digital materials building a trusted digital repository collaboration in developing and supporting the technical and organizational infrastructure for sustainability in both academic and state government the Archivists' Toolkit software application Archives and the Digital Library is timely, important reading for archivists, librarians, library administrators, library information educators, archival educators, and students.

**Air Pollution XXIII** J. Barnes, 2015-06-01 Containing the proceedings of the 23rd International Conference on Modelling, Monitoring and Management of Air Pollution, this book is the latest in a well established series. It addresses various aspects of a topic that is of considerable worldwide concern due to its known impact on health and the environment. The need to balance concern for the environment with the demand for generating economic growth makes air pollution a particularly challenging problem. Further complicating the picture, the widespread nature and effects of air pollution make it an issue that requires not just local but global attention and cooperation. Science can help us identify the nature and

scale of air pollution impacts. It is therefore essential in guiding government decisions regarding the most appropriate and effective regulations. As we learn ever more about the basic science of air pollution, and its application, we are better able to predict, assess, and mitigate its effects, locally, regionally, nationally, and internationally. This book presents advances in our knowledge of the science of air pollution. Topics covered include Air Pollution Modelling; Air Pollution Mitigation; Air Pollution Management; Aerosols and Particles; Emission Studies; Exposure and Health Effects; Indoor Air Pollution; Monitoring and Measuring; Case Studies; Emerging Technologies; Power Generation and Air Pollution; Incineration Plant Studies; Air Pollution Chemistry; Global and Regional Studies; Policy and Legislation.

Fifth [IEEE] International Conference on Information Visualisation Ebad Banissi, 2001  
Annotation The main subjects of the July 2001 conference are computer aided geometric design, medical visualization, visualization in built environment, digital art, rendering, and visual methods for parallel and distributed programming. Topics of the 110 papers include a prototype design tool for building integrated photovoltaics, finding and characterizing candidate binding sites, visualizing capacity and load in production planning, error analysis for the evaluation of rational Bezier curves, drawing conics on a hexagonal grid, visual interaction with XML metadata, virtual access to landscapes and historic gardens at linked locations, and adaptive fairing of surface meshes by geometric diffusion. **Educational Innovation in Economics and Business** Ann Bentzen-Bilkvist, Wim H. Gijssels, Richard G. Milder, 2013-03-09 Many workplaces have become characterized as learning organizations where knowledge workers provide the required competitive edge. Due to the dynamic changes in the economic structures, adaptive, generative, lifelong, and continuous learning have become norms. Leaders in the corporate world have a greater responsibility to provide direction in knowledge building and knowledge delivery systems. The key competencies required for leadership have been impacted by the change in corporate structures and the ever-changing formats that define competitive business landscapes. Traditional universities are also experiencing greater demand to provide the necessary skill sets required by individuals tasked with developing, incorporating, and communicating new knowledge. When it comes to learning models, the business focus on continuous improvement makes all the sense in the world. It is in this spirit of continuous learning that this book was compiled. The seventh volume in the series Educational Innovation in Economics and Business contains a unique selection of articles addressing four major themes: (I) Designing New Education Models, (II) Preparing Students for Work in the Corporate Arena, (III) Using Technology to Enhance Learning Environments, and (IV) Methods to Maximize Student Learning. It is meant for educators in corporate training centers as well as for teachers in further and higher education.

**Smart Sensors and Systems** Youn-Long Lin, Chong-Min Kyung, Hiroto Yasuura, Yongpan Liu, 2015-07-13 This book describes for readers technology used for effective sensing of our physical world and intelligent processing techniques for sensed information, which are essential to the success of the Internet of Things (IoT). The authors provide a multidisciplinary view of sensor technology from MEMS, biological, chemical, and electrical domains and showcase smart sensor systems in real applications including smart home, transportation, medical, environmental, agricultural, etc. Unlike earlier books on sensors, this book provides a "global" view on smart sensors covering abstraction levels from device, circuit, systems, and algorithms.

Remote Detection and Maritime Pollution Stephane Le Floch, Frederic Muttin, 2021-02-17

The detection of marine pollution requires a scientific and operational response to identify contaminants, chemicals and hydrocarbons, and to support contrasting observations. Remote Detection and Maritime Pollution originates from the proceedings of CEDRE Information Day, held on October 13, 2016 in Brest, France. Containing four parts encompassing 13 chapters, this book explores remote detection channels for the multiform marine pollutions of today and of the future. With a focus on transatlantic cooperation, it covers remote detection sensors, the state of the art of maritime surveillance with regard to the interests of national and international authorities, the benefits of response strategy, and geophysical exploration. Future vectors (airplanes, drones, satellites, among others) and sensors (radar, optical, hyperspectral and so on) are also studied. This book is a valuable resource for practical solutions for marine authorities, industries (chemical, energy, aerospace, petroleum, shipping), lawyers and scientists.

Environmental Impact II G. Passerini, C.A. Brebbia, 2014-05-14

This book contains papers presented at the 2nd International Conference on Environmental and Economic Impacts on Sustainable Development incorporating Environmental Economics, Toxicology and Brownfields. Following the success of the first meeting held in the New Forest, home of the Wessex Institute of Technology, in 2012, it considers the pressing issues related to environmental impacts in order to provide complete solutions. The included papers discuss how to assess the impact of economic constraints on the environment, considering the social aspects as well as any resulting environmental damage. The overuse of natural resources and the resulting pollution of the environment need to be better understood in financial terms. Uncontrolled development can result in damage to the environment in terms of the release of toxic substances and hazardous waste. The increasing number of new chemical compounds poses a major challenge to the environment as it is difficult in many cases to predict their effects and take appropriate decisions. Their economic impact can be particularly challenging. The book examines issues related to whether some forms of development are compatible with environmental protection, particularly in cases of possible serious contamination and toxicity. The demand for development land has led to the reuse of properties that have been abandoned for a variety of reasons. Many of them are brownfields, sites which have deteriorated in different ways, including by contamination. These sites are usually a burden in terms of economic losses and contribute to the detriment of the quality of life of entire neighbourhoods. Rehabilitation of local fields, particularly those that are contaminated can be an expensive undertaking and require not only technical solutions but the involvement of financial, regulatory and community stakeholders. Fundamental to this premise is the analysis of the risks involved and the development of appropriate strategies. The papers address problems of great importance discussing more constructive and progressive approaches to ensure sustainability. A major motivation for the meeting is to learn from past failures, to avoid repeating similar mistakes, while attempting to prevent emerging threats to the environmental and ecological systems. Topics covered include: Environmental policies and planning; Environmental assessments; Development issues; Sustainable cities; Economic analysis;

Natural resources management; Energy and the environment; Food and the environment; Ecosystems health; Soil contamination; Brownfields rehabilitation; Water resources management; Air and water pollution; Toxicity studies; Environmental health risk; Risk analysis; Community participation; Legislation and regulations.
