Legacies of Christian Languaging and Literacies in American Education Mary M. Juzwik,Jennifer C.

Stone,Kevin J. Burke,Denise Dávila,2019-10-23 Because spiritual life and religious participation are widespread human and cultural phenomena, these experiences unsurprisingly find their way into English language arts curriculum, learning, teaching, and teacher education work. Yet many public school literacy teachers and secondary teacher educators feel unsure how to engage religious and spiritual topics and responses in their classrooms. This volume responds to this challenge with an in-depth exploration of diverse experiences and perspectives on Christianity within American education. Authors not only examine how Christianity - the historically dominant religion in American society - shapes languaging and literacies in schooling and other educational spaces, but they also imagine how these relations might be reconfigured. From curricula to classroom practice, from narratives of teacher education to youth coming-to-faith, chapters vivify how spiritual lives, beliefs, practices, communities, and religious traditions interact with linguistic and literate practices and pedagogies. In relating legacies of Christian languaging and literacies to urgent issues including White supremacy, sexism and homophobia, and the politics of exclusion, the volume enacts and invites inclusive relational configurations within and across the myriad American Christian sub-cultures coming to bear on English language arts curriculum, teaching, and learning. This courageous collection contributes to an emerging scholarly literature at the intersection of language and literacy teaching and learning, religious literacy, curriculum studies, teacher education, and youth studies. It will speak to teacher educators, scholars, secondary school teachers, and graduate and postgraduate students, among others.

Multimedia Modeling: Towards Information

Superhighway Tat Seng Chua,1995-11-10 The process of integrating multiple senses and media into computer systems accelerated recently. This has broaden the applications of multimedia from the traditional areas of information organization, presentation and learning, to the new fields of simulation and virtual reality. Applications that have benefited from the introduction of multimedia include: training, demonstration of products for sales or inventory, education, computer-aided design and engineering, medicine, weather, and entertainment.This volume is devoted to the discussion of effective modeling of multimedia information and systems for a wide range of applications. It is perhaps the only book that devotes entirely to this important but much neglected topic.
