How Images Think Ron Burnett,2005 The transformation of images in the age of new mediaand the digital revolution.

The Language of Images W. J. Thomas Mitchell,1980-01 A remarkably rich and provocative set of essays on the virtually infinite kinds of meanings generated by images in both the verbal and visual arts. Ranging from Michelangelo to Velazquez and Delacroix, from the art of the emblem book to the history of photography and film, *The Language of Images* offers at once new ways of thinking about the inexhaustibly complex relation between verbal and iconic representation.—James A. W. Heffernan, Dartmouth College

About to Die Barbie Zelizer,2010-12-01 Due to its ability to freeze a moment in time, the photo is a uniquely powerful device for ordering and understanding the world. But when an image depicts complex, ambiguous, or controversial events--terrorist attacks, wars, political assassinations--its ability to influence perception can prove deeply unsettling. Are we really seeing the world as it is or is the image a fabrication or projection? How do a photo's content and form shape a viewer's impressions? What do such images contribute to historical memory? *About to Die* focuses on one emotionally charged category of news photograph--depictions of individuals who are facing imminent death--as a prism for addressing such vital questions. Tracking events as wide-ranging as the 1906 San Francisco Earthquake, the Holocaust, the Vietnam War, and 9/11, Barbie Zelizer demonstrates that modes of journalistic depiction and the power of the image are immense cultural forces that are still far from understood. Through a survey of a century of photojournalism, including close analysis of over sixty photos, *About to Die* provides a framework and vocabulary for understanding the news imagery that so profoundly shapes our view of the world.

Surrational Images Scott Mutter,1992 Mutter's striking images adorn the walls of homes and businesses nationwide. This collection of photomontages is presented in a generously-sized edition that will thrill aficionados and entice those unacquainted with his work. Mutter's work is extraordinary and categorically unique.--Saul Bass. 35 duotones. (University Of Illinois Press)

Listening to Images Tina M. Campt,2017-03-17 In *Listening to Images* Tina M. Campt explores a way of listening closely to photography, engaging with lost archives of historically dismissed photographs of black subjects taken throughout the black diaspora. Engaging with photographs through sound, Campt looks beyond what one usually sees and attunes her senses to the other affective frequencies through which these photographs register. She hears in these photos—which range from late nineteenth-century ethnographic photographs of rural African women and photographs taken in an early twentieth-century Cape Town prison to postwar passport photographs in Birmingham, England and 1960s mug shots of the Freedom Riders—a quiet intensity and quotidian practices of refusal. Originally intended to dehumanize, police, and restrict their subjects, these photographs convey the softly buzzing tension of colonialism, the low hum of resistance and subversion, and the anticipation and performance of a future that has yet to happen. Engaging with discourses of fugitivity, black futurity, and black feminist theory, Campt takes these tools of colonialism and repurposes them, hearing and sharing their moments of refusal, rupture, and imagination.

Satellite Image Analysis: Clustering and Classification Surekha Borra, Rohit Thanki, Nilanjan Dey, 2019-02-08 Thanks to recent advances in sensors, communication and satellite technology, data storage, processing and networking capabilities, satellite image acquisition and mining are now on the rise. In turn, satellite images play a vital role in providing essential geographical information. Highly accurate automatic classification and decision support systems can facilitate the efforts of data analysts, reduce human error, and allow the rapid and rigorous analysis of land use and land cover information. Integrating Machine Learning (ML) technology with the human visual psychometric can help meet geologists' demands for more efficient and higher-quality classification in real time. This book introduces readers to key concepts, methods and models for satellite image analysis; highlights state-of-the-art classification and clustering techniques; discusses recent developments and remaining challenges; and addresses various applications, making it a valuable asset for engineers, data analysts and researchers in the fields of geographic information systems and remote sensing engineering.

Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny, 2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence. Three major classes of optic flow computation techniques can be discriminated (see for a good overview Beauchemin and Barron [Beauchemin1995]): gradient based (or differential) methods; phase based (or frequency domain) methods; correlation based (or area) methods; feature point (or sparse data) tracking methods; In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method. The method, originally proposed by Florack and Nielsen [Florack1998a] is known as the Multiscale Optic Flow Constraint Equation (MOFCE). This is a scale space version of the well known computer vision implementation of the optic flow constraint equation, as originally proposed by Horn and Schunck [Horn1981]. This scale space variation, as usual, consists of the introduction of the aperture of the observation in the process. The application to stereo has been described by Maas et al. [Maas 1995a, Maas 1996a]. Of course, difficulties arise when structure emerges or disappears, such as with occlusion, cloud formation etc. Then knowledge is needed about the processes and objects involved. In this chapter we focus on the scale space approach to the local measurement of optic flow, as we may expect the visual front end to do. 17. 2 Motion detection with pairs of receptive fields As a biologically motivated start, we begin with discussing some neurophysiological findings in the visual system with respect to motion detection.

RGB-D Image Analysis and Processing Paul L. Rosin, Yu-Kun Lai, Ling Shao, Yonghuai Liu, 2019-10-26 This book focuses on the fundamentals and recent advances in RGB-D imaging as well as covering a range of RGB-D applications. The topics covered include: data acquisition, data quality assessment, filling holes, 3D reconstruction, SLAM, multiple depth camera systems, segmentation, object detection, saliency detection, pose estimation, geometric modelling, fall detection, autonomous driving, motor rehabilitation therapy, people counting and cognitive service robots. The availability of cheap RGB-D sensors has led to an explosion over the last five years in the capture and application of colour plus depth data. The addition of depth data to regular RGB images vastly increases the range of applications, and has resulted in a demand for robust and real-time processing of RGB-D data. There remain many technical challenges, and RGB-D image processing is an ongoing research area. This book covers the full state of the art, and consists of a series of chapters by internationally renowned experts in the field. Each chapter is written so as to provide a detailed overview of that topic. RGB-D Image Analysis and Processing will enable both students and professional developers alike to quickly get up to speed with contemporary techniques, and apply RGB-D imaging in their own projects.

Performing Image Isobel Harbison, 2019-04-09 An examination of how artists have combined performance and moving image for decades, anticipating our changing relation to images in the internet era. In *Performing Image*, Isobel Harbison examines how artists have combined performance and moving image in their work since the 1960s, and how this work anticipates our changing relations to images since the advent of smart phones and the spread of online prosumerism. Over this period, artists have used a variety of DIY modes of self-imaging and circulation—from home video to social media—suggesting how and why Western subjects might seek alternative platforms for self-expression and self-representation. In the course of her argument, Harbison offers close analyses of works by such artists as Robert Rauschenberg, Yvonne Rainer, Mark Leckey, Wu Tsang, and Martine Syms. Harbison argues that while we produce images, images also produce us—those that we take and share, those that we see and assimilate through mass media and social media, those that we encounter in museums and galleries. Although all the artists she examines express their relation to images uniquely, they also offer a vantage point on today's productive-consumptive image circuits in which billions of us are caught. This unregulated, all-encompassing image performativity, Harbison writes, puts us to work, for free, in the service of global corporate expansion. Harbison offers a three-part interpretive framework for understanding this new proximity to images as it is negotiated by these artworks, a detailed outline of a set of connected practices—and a declaration of the value of

art in an economy of attention and a crisis of representation.

The Ground of the Image Jean-Luc Nancy,2009-08-25 The renowned philosopher provides “noteworthy contributions to themes connected with images, imagination, representation, aesthetics, and . . . religion.” –Journal of American Academy of Religion What is this power that lies in the depths and recesses of an image—which is always only an impenetrable surface? What secrets are concealed in the ground or in the figures of an image—which never does anything but show just exactly what it is and nothing else? How does the immanence of images open onto their unimaginable others, their imageless origin? In this collection of writings on images and visual art, Jean-Luc Nancy explores such questions through an extraordinary range of references. From Renaissance painting and landscape to photography and video, from the image of Roman death masks to the language of silent film, from Cleopatra to Kant and Heidegger, Nancy pursues a reflection on visibility that goes far beyond the many disciplines with which it intersects. He offers insights into the religious, cultural, political, art historical, and philosophical aspects of the visual relation, treating such vexed problems as the connection between image and violence, the sacred status of images, and, in a profound and important essay, the forbidden representation of the Shoah. In the background of all these investigations lies a preoccupation with finitude, the unsettling forces envisaged by the images that confront us, the limits that bind us to them, the death that stares back at us from their frozen traits and distant intimacies. In these vibrant and complex essays, a central figure in European philosophy continues to work through some of the most important questions of our time.
