Gerard Salton

Indexing Books, Second Edition Nancy C. Mulvany, 2009-11-15 Since 1994, Nancy Mulvany's Indexing Books has been the gold standard for thousands of professional indexers, editors, and authors. This long-awaited second edition, expanded and completely updated, will be equally revered. Like its predecessor, this edition of Indexing Books offers comprehensive, reliable treatment of indexing principles and practices relevant to authors and indexers alike. In addition to practical advice, the book presents a big-picture perspective on the nature and purpose of indexes and their role in published works. New to this edition are discussions of information overload and the role of the index, open-system versus closed-system indexing, electronic submission and display of indexes, and trends in software development, among other topics. Mulvany is equally comfortable focusing on the nuts and bolts of indexing—how to determine what is indexable, how to decide the depth of an index, and how to work with publisher instructions—and broadly surveying important sources of indexing guidelines such as The Chicago Manual of Style, Sun Microsystems, Oxford University Press, NISO TR03, and ISO 999. Authors will appreciate Mulvany's in-depth consideration of the costs and benefits of preparing one's own index versus hiring a professional, while professional indexers will value Mulvany's insights into computer-aided indexing. Helpful appendixes include resources for indexers, a worksheet for general index specifications, and a bibliography of sources to consult for further information on a range of topics. Indexing Books is both a practical guide and a manifesto about the vital role of the human-crafted index in the Information Age. As the standard indexing reference, it belongs on the shelves of everyone involved in writing and publishing nonfiction books.

With *Enhanced Indexing Strategies*, author Tristan Yates reveals how you can create and build high-performance indexing strategies using derivatives that can potentially generate much higher returns than conventional index investing. In addition, *Enhanced Indexing Strategies* introduces six innovative long-term indexing strategies using futures and options, each with its own advantages and applications.

A Theory of Indexing Gerard Salton, 1975 Test results are included which illustrate the effectiveness of the theory.

Indexing Concepts and Methods Harold Borko, Charles L. Fundamentals of Database Indexing and Searching Arnab Bhattacharya, 2014-12-02 Fundamentals of Database Indexing and Searching presents well-known database searching and indexing techniques. It focuses on similarity search queries, showing how to use distance functions to measure the notion of dissimilarity. After defining database queries and similarity search queries, the book organizes the most common and representative index structures according to their characteristics. The author first describes low-dimensional index structures, memory-based index structures, and hierarchical disk-based index structures. He then outlines useful distance measures and index structures that use the distance information to efficiently solve similarity search queries. Focusing on the difficult dimensionality phenomenon, he also presents several indexing methods that specifically deal with high-dimensional spaces. In addition, the book covers data reduction techniques, including embedding, various data transforms, and histograms. Through numerous real-world examples, this book explores how to effectively index and search for information in large collections of data. Requiring only a basic computer science background, it is accessible to practitioners and advanced undergraduate students.

Book Indexing For Authors Katherine Verne, Michelle Campbell-Scott, 2020-07-19 An index could be the thing your book is missing. Take a look in a library or bookstore and you will find few nonfiction books that don't have indexes. That's because publishers know how important the presence of an index is to readers - and therefore how vital it is for sales. Indies often don't realize this - and miss out on potential sales and potential good reviews. A book index is like a guidepost or map for your readers. It tells them what to expect from your book, where to find topics that interest them, and - importantly - what isn't in the book. This means that it reduces the chances of poor reviews and increases the chances of positive reviews. An index helps usability, which makes it more useful to readers. If you are an author thinking of creating your own index, you're in good company. There is quite a precedent for author-indexes (especially in the world of academia, where subjects are so specialist that it's hard to find a professional indexer with relevant experience). This book will guide you through the process and show you how to do it yourself in Microsoft Word. (Sorry, no Mac instructions.) This book is for you if... You need easy-to-understand instructions on how to create your own index for a non-fiction book using Microsoft Word; Your [traditional] publisher is insisting on an index and expecting you to pay for it; You don't have a big budget; You aren't a computer or publishing expert; You don't want to spend weeks (or months) learning how to index. This book is not for you if... You need an in-depth, theory-based book. Many people like the jump-right-in, workbook approach. You are looking for something to help you become a professional indexer, or to win indexing awards. Most professional training courses and organizations often recommend Nancy C. Mulvany's Indexing Books. Also check out the American Society of Indexers (ASI) - www.asindexing.org - and other professional and standards organizations in other countries. You can find courses on indexing in local colleges, as well as online. If you do buy this [print] book, you will have the opportunity of joining the forthcoming online course based on it - free of charge. You will be able to ask questions, receive help, and see in real-time what the creation of an index involves.

Indexing and Abstracting in Theory and Practice Frederick Wilfrid Lancaster, 2003 This third edition of what has become a classic among textbooks in schools of library and information science (and related programs) has been thoroughly updated to reflect the evolving technological advancements in the field. Focusing on indexing of the subject matter of material, the beginning chapters review the literature and discuss various principles and practices such as exhaustivity or depth of indexing, specificity, checktags, pre- and post-coordinate indexes, and consistency and quality of indexing. Discussions on abstracting cover such concepts as the different types of abstracts, purpose of an abstract, structured versus narrative abstracts, informative versus indicative abstracts, subject slanting, modular abstracts, and writing and evaluating an abstract. Various styles of indexing used in printed publications such as Index Medicus, the Engineering Index, and Chemical Abstracts are illustrated in the text; although the author is quick to note that printed tools are used much less today in favor of their online counterparts. In the online world, indexing has even greater importance in the effort to retrieve relevant data efficiently. Related concepts such as weighted indexing, linking of terms, and relational indicators are discussed as aids to precision. The idiosyncrasies of indexing special formats such as images and sounds and the Internet, as well as the use of computer-generated or automated indexing and abstracting, are also reviewed. The author admits that the Web has become so large and complex that it is beyond the scope of any single book to explain all of its components. He suggests the use of Web-based services such as The Extreme Web Searcher's Internet Handbook News and Updates <http://extremesearcher.com/news.html> or Search Engine Watch <http://searchenginewatch.com> to keep current with new developments.

Marketing Your Indexing Services Anne Leach, 1998 This is a collection of articles from ASI's newsletter, Key Words, with additional chapters by Anne Leach. Indexing Biographies and Other Stories of Human Lives Hazel K. Bell, 2020-02-26 Stories of human lives can be fascinating but frequently difficult to index well. The new, updated fourth edition of Hazel K. Bell's Indexing Biographies is a valuable guide to the points for consideration when indexing life histories, biographies, autobiographies, letters and other narrative texts. Topics include the indexing of fiction, analysis of the text before indexing, names and their various forms, appropriate language choice for index entries, impartiality of the indexer, and how to treat main characters (through appropriate subheading structure) and minor characters (where strings of locators are sometimes unavoidable). The book also discusses more technical matters of index layout, presentation and arrangement of entries, such as how to judge whether alphabetical, chronological, page order or thematic grouping is most appropriate for the text. Examples of good practice and outstanding indexes are provided throughout. Lists of useful reference works and relevant articles from The Indexer journal are also suggested. There is, of course, a comprehensive index. Indexing Biographies contains fine advice on best indexing practices for book indexers, trainee indexers, authors, publishers and all lovers of life histories. It is an excellent overview of the complex, important and rewarding task of indexing such material.

Indexing Techniques for Advanced Database Systems Elisa Bertino, Beng Chin Ooi, Ron Sacks-Davis, 1997-08-31

Indexing and Retrieval of Non-Text Information Diane Rasmussen Neal, 2012-10-30 The scope of this volume will encompass a collection of research papers related to indexing and retrieval of online non-text information. In recent years, the Internet has seen an exponential increase in the number of documents placed online that are not in textual format. These documents appear in a variety of contexts, such as user-generated content sharing websites, social networking websites etc. and formats, including photographs, videos, recorded music, data visualizations etc. The prevalence of these contexts and data formats presents a particularly challenging task to information indexing and retrieval research due to many difficulties, such as assigning suitable semantic metadata, processing and extracting non-textual content automatically, and designing retrieval systems that speak in the native language of non-text documents.

Indexing for Maximum Investment Results Albert S. Neubert, 1998 -Choosing a benchmark -Using derivatives to index -Overview of the market place -Key performance track records -Key tool for many investors Twenty-four years after investment managers decided to implement Standard & Poor's 500 indexing strategy, the verdict is in. The first indexers beat more than 99 percent of all actively managed stock funds. Over the last ten years, funds based on the S&P 500 out-performed more than 80 percent of all mutual funds. Today about 450 billion dollars is indexed to the S&P 500, almost 10 percent of the total market value of all stocks traded in the U.S. The strategy has been applied to other asset classes, including bonds and real estate. In total, indexing now accounts for more than 25 percent of the investment methodology of all pension funds in the U.S. Topics include: choosing a benchmark; overview of the marketplace; using derivatives to index; performance track record

versus active management; index methodology and other styles; and index price effects on constituent securities.
