Internet Filtering

Jonathan A. Zdziarski

Access Denied Ronald Deibert,John Palfrey,Rafal Rohozinski,Jonathan Zittrain,2008-01-25 A study of Internet blocking and filtering around the world: analyses by leading researchers and survey results that document filtering practices in dozens of countries. Many countries around the world block or filter Internet content, denying access to information that they deem too sensitive for ordinary citizens—most often about politics, but sometimes relating to sexuality, culture, or religion. Access Denied documents and analyzes Internet filtering practices in more than three dozen countries, offering the first rigorously conducted study of an accelerating trend. Internet filtering takes place in more than three dozen states worldwide, including many countries in Asia, the Middle East, and North Africa. Related Internet content-control mechanisms are also in place in Canada, the United States and a cluster of countries in Europe. Drawing on a just-completed survey of global Internet filtering undertaken by the OpenNet Initiative (a collaboration of the Berkman Center for Internet and Society at Harvard Law School, the Citizen Lab at the University of Toronto, the Oxford Internet Institute at Oxford University, and the University of Cambridge) and relying on work by regional experts and an extensive network of researchers, Access Denied examines the political, legal, social, and cultural contexts of Internet filtering in these states from a variety of perspectives. Chapters discuss the mechanisms and politics of Internet filtering, the strengths and limitations of the technology that powers it, the relevance of international law, ethical considerations for corporations that supply states with the tools for blocking and filtering, and the implications of Internet filtering for activist communities that increasingly rely on Internet technologies for

communicating their missions. Reports on Internet content regulation in forty different countries follow, with each two-page country profile outlining the types of content blocked by category and documenting key findings. Contributors Ross Anderson, Malcolm Birdling, Ronald Deibert, Robert Faris, Vesselina Haralampieva [as per Rob Faris], Steven Murdoch, Helmi Noman, John Palfrey, Rafal Rohozinski, Mary Rundle, Nart Villeneuve, Stephanie Wang, Jonathan Zittrain

  A Practical Guide to Internet Filters Karen G. Schneider,1997 What are filters and how do they work? Which ones are the most effective for school and public libraries? Are there legal ramifications to using filters. As more libraries offer Internet access to their customers, filtering is becoming a major topic with library boards, governing officials, and the community. This book is a guide that aims to prepare and inform librarians in schools and public libraries about the issue. Contents include: a description of filters and their alternatives, along with factors to consider in the library's decision whether to use them or not; explanations and evaluations of over a dozen client-based filters, proxy servers, and proxy server enhancements including Bess, Cyber Patrol, Cybersitter, Net Nanny, Safesurf, Surf Watch, and Websense; a discussion on the legal issues involving filters, including recent cases and the question of how much legal responsibility libraries have for Web content they make available.

  The V-chip Debate Monroe E. Price,2013-11-26 The V-chip is a highly significant part of the discussion about whether television (or broadcasting in general) deserves some special attention in terms of its accessibility to children, its particular power to affect conduct, and its invasiveness. But

4

as this notion of filtering and labeling has caught the imagination of the regulator, the legislator, and all those who wish to consider new ways to alter bargaining over imagery in society, the very idea of the V-chip or its equivalent is moving across other technologies, including the Internet. The V-chip issue has also fueled the ongoing debate about violence and sexual practices in society, and how representations on television relate to those practices. Although the initial concept of the V-chip is simple, its flow into the public realm raises so many extraordinary questions that the introduction and production of the chip virtually serves as a case study in problems of law and public policy. The very conceptualization of speech in society is being affected by this issue. Accordingly, the place of the V-chip in this debate is increasingly important; indeed, it may be argued that the V-chip's contribution to legal argumentation may be greater than its ultimate contribution to the relationship between children and imagery. Among the questions the contributors address are: *What research basis is necessary to require a framework for labeling and rating? *What relationship between government and the image-producing industries can be characterized--for constitutional and other reasons--as voluntary as opposed to coercive? *Who should evaluate these images? *To what extent should the evaluation process be centralized and/or distributed? *What assessment is appropriate to evaluate whether the experiment is successful? In addition to the V-chip's origin's in Canada and its further evolution in the United States, this book discusses the development of the V-chip and television rating systems in Europe, Australia, and throughout the world. It also includes essays which contrast the very different approaches in Canada and the United States in terms of the role of regulatory agency, industry, and government.

Access Controlled Ronald Deibert,John Palfrey,Rafal Rohozinski,Jonathan Zittrain,2010-04-02 Reports on a new generation of Internet controls that establish a new normative terrain in which surveillance and censorship are routine. Internet filtering, censorship of Web content, and online surveillance are increasing in scale, scope, and sophistication around the world, in democratic countries as well as in authoritarian states. The first generation of Internet controls consisted largely of building firewalls at key Internet gateways; China's famous "Great Firewall of China" is one of the first national Internet filtering systems. Today the new tools for Internet controls that are emerging go beyond mere denial of information. These new techniques, which aim to normalize (or even legalize) Internet control, include targeted viruses and the strategically timed deployment of distributed denial-of-service (DDoS) attacks, surveillance at key points of the Internet's infrastructure, take-down notices, stringent terms of usage policies, and national information shaping strategies. Access Controlled reports on this new normative terrain. The book, a project from the OpenNet Initiative (ONI), a collaboration of the Citizen Lab at the University of Toronto's Munk Centre for International Studies, Harvard's Berkman Center for Internet and Society, and the SecDev Group, offers six substantial chapters that analyze Internet control in both Western and Eastern Europe and a section of shorter regional reports and country profiles drawn from material gathered by the ONI around the world through a combination of technical interrogation and field research methods.
  Comparative study on blocking, filtering and take-down of illegal internet content Council of Europe,2017-03-28 Across the member states of the Council of Europe, both the blocking and removal of online material are frequently

treated in a similar way. However, the existence or the lack of a legislative framework specifically targeted to the internet, and the specificities of national regulatory "models" translate in different practices and can be a challenge for the states concerned. The Council of Europe commissioned a comparative study from the Swiss Institute of Comparative Law in respect of filtering, blocking and take-down of illegal content on the internet in the 47 member states of the Organisation. This study describes and assesses the legal framework but also the relevant case-law and practice in the field. It comprises a comparative analysis – which is the subject of this publication – and country reports (available on the website: www.coe.int/freedomofexpression).

  How the Internet Really Works Article 19,2020-12-11 An accessible, comic book-like, illustrated introduction to how the internet works under the hood, designed to give people a basic understanding of the technical aspects of the Internet that they need in order to advocate for digital rights. The internet has profoundly changed interpersonal communication, but most of us don't really understand how it works. What enables information to travel across the internet? Can we really be anonymous and private online? Who controls the internet, and why is that important? And... what's with all the cats? How the Internet Really Works answers these questions and more. Using clear language and whimsical illustrations, the authors translate highly technical topics into accessible, engaging prose that demystifies the world's most intricately linked computer network. Alongside a feline guide named Catnip, you'll learn about: The How-What-Why of nodes, packets, and internet protocols Cryptographic techniques to ensure the secrecy and integrity of your data

Censorship, ways to monitor it, and means for circumventing it Cybernetics, algorithms, and how computers make decisions Centralization of internet power, its impact on democracy, and how it hurts human rights Internet governance, and ways to get involved This book is also a call to action, laying out a roadmap for using your newfound knowledge to influence the evolution of digitally inclusive, rights-respecting internet laws and policies. Whether you're a citizen concerned about staying safe online, a civil servant seeking to address censorship, an advocate addressing worldwide freedom of expression issues, or simply someone with a cat-like curiosity about network infrastructure, you will be delighted -- and enlightened -- by Catnip's felicitously fun guide to understanding how the internet really works!

   The Filter Bubble Eli Pariser,2011-05-12 An eye-opening account of how the hidden rise of personalization on the Internet is controlling-and limiting-the information we consume. In December 2009, Google began customizing its search results for each user. Instead of giving you the most broadly popular result, Google now tries to predict what you are most likely to click on. According to MoveOn.org board president Eli Pariser, Google's change in policy is symptomatic of the most significant shift to take place on the Web in recent years-the rise of personalization. In this groundbreaking investigation of the new hidden Web, Pariser uncovers how this growing trend threatens to control how we consume and share information as a society-and reveals what we can do about it. Though the phenomenon has gone largely undetected until now, personalized filters are sweeping the Web, creating individual universes of information for each of us. Facebook-the primary news

source for an increasing number of Americans-prioritizes the links it believes will appeal to you so that if you are a liberal, you can expect to see only progressive links. Even an old-media bastion like The Washington Post devotes the top of its home page to a news feed with the links your Facebook friends are sharing. Behind the scenes a burgeoning industry of data companies is tracking your personal information to sell to advertisers, from your political leanings to the color you painted your living room to the hiking boots you just browsed on Zappos. In a personalized world, we will increasingly be typed and fed only news that is pleasant, familiar, and confirms our beliefs-and because these filters are invisible, we won't know what is being hidden from us. Our past interests will determine what we are exposed to in the future, leaving less room for the unexpected encounters that spark creativity, innovation, and the democratic exchange of ideas. While we all worry that the Internet is eroding privacy or shrinking our attention spans, Pariser uncovers a more pernicious and far- reaching trend on the Internet and shows how we can- and must-change course. With vivid detail and remarkable scope, The Filter Bubble reveals how personalization undermines the Internet's original purpose as an open platform for the spread of ideas and could leave us all in an isolated, echoing world.

  Filtering the Web to Feed Data Warehouses Witold Abramowicz,Pawel J. Kalczynski,Krzysztof Wecel,2011-06-28 Information is a key factor in business today, and data warehousing has become a major activity in the development and management of information systems to support the proper flow of information. Unfortunately, the majority of information systems are based on structured information stored in organizational databases, which means that the company is isolated from the business environment by concentrating on

their internal data sources only. It is therefore vital that organizations take advantage of external business information, which can be retrieved from Internet services and mechanically organized within the existing information structures. Such a continuously extending integrated collection of documents and data could facilitate decision-making processes in the organization. Filtering the Web to Feed Data Warehouses discusses areas such as: – how to use data warehouse for filtering Web content – how to retrieve relevant information from diverse sources on the Web – how to handle the time aspect – how to mechanically establish links among data warehouse structures and documents filtered from external sources – how to use collected information to increase corporate knowledge and gives a comprehensive example, illustrating the idea of supplying data warehouses with relevant information filtered from the Web.

  Internet Censorship Christine Zuchora-Walske,2010-01-01 Discusses various issues pertaining to the debate over Internet censorship, covering topics such as child safety, public morality, security, intellectual property, freedom, and the history of censorship in the United States.

  Censorship on the Internet Wendy Herumin,2004 In Censorship on the Internet: From Filters to Freedom of Speech, author Wendy Herumin defines complex terms and concepts as she explores this controversial subject. With such diverse topics as the Bill of Rights, filters in schools and libraries, the legal status of students, and the worldwide debate over the World Wide Web, Censorship on the Internet covers issues of great relevance to young readers. Book jacket.

  The Internet Cynthia A. Bily,2012-06-15 Editor Cynthia A. Bily has compiled a slew of essays that cover a variety of topics, including the legal issues

of teen internet use; balancing First Amendment rights with safety; court cases related to the Communications Decency Act of 1996; the role of schools in off-campus internet activity; downloading music illegally; and cyberbullying.
