Computerized Monitoring and Online Privacy Thomas A. Peters,1999-01-01 Increasingly, computers are a part of even the most ordinary and simple aspects of human existence. Computers have changed forever how we work, learn, shop and seek information. They have also, since the 1960s, been programmed to monitor and analyze in various ways the interaction between humans and themselves. The rapid development of the World Wide Web in the 1990s has given new life, direction and urgency to this enterprise. This work describes the myriad ways, benign or malign, in which computers are used to monitor people's use of computers. Four distinct contexts for monitoring are examined: formal learning environments (e.g., educational software); information seeking environments (e.g., online library catalogs); the workplace; and the Internet (e.g., online shopping). Computerized monitoring often is called an invasion of privacy, and the conceptual and ethical dimensions of confidentiality and privacy in virtual environments are explored at length. In addition to providing information about the various computerized monitoring tools and techniques, this work focuses on the broader social, conceptual, ethical and legal implications.

Internet and Surveillance Christian Fuchs,Kees Boersma,Anders Albrechtslund,Marisol Sandoval,2013-06-17 The Internet has been transformed in the past years from a system primarily oriented on information provision into a medium for communication and community-building. The notion of "Web 2.0", social software, and social networking sites such as Facebook, Twitter and MySpace have emerged in this context. With such platforms comes the massive provision and storage of personal data that are systematically evaluated, marketed, and used for targeting users with advertising. In a world of global economic competition, economic crisis, and fear of terrorism after 9/11, both corporations and state institutions have a growing interest in accessing this personal data. Here, contributors explore this changing landscape by addressing topics such as commercial data collection by advertising, consumer sites and interactive media; self-disclosure in the social web; surveillance of file-sharers; privacy in the age of the internet; civil watch-surveillance on social networking sites; and networked interactive surveillance in transnational space. This book is a result of a research action launched by the intergovernmental network COST (European Cooperation in Science and Technology).

Customer-based IP Service Monitoring with Mobile Software Agents Manuel Günter,2012-12-06 Presenting mobile software agents for Internet servic monitoring, this research monograph discusses newly standardized Internet technologies that allow service providers to offer secured Internet services with quality guarantees. Yet, today the customers of such services have no independent tool to verify (monitor) the service quality. This book shows why mobile software agents are best fit to fill the gap. The book is addressed to mobile agent researchers looking for new and fruitful application areas. It will also be a valuable resource for innovative Internet providers who are looking for a service monitoring infrastructure going beyond monthly reports.

Use and Monitoring of E-mail, Intranet, and Internet Facilities at Work Roger Blanpain,Marc Van Gestel,2004-01-01 Two legitimate statements in search of legal doctrine: ?An employee must have a reasonable expectation of privacy.? ?The efficient operation of the company must be safeguarded.? As a lawyer considers each of these assertions, a significant region of incompatibility emerges. In the context of the use of information technology systems in the workplace, a collision of rights is exposed that has engendered a virtual battleground in the theory and practice of labour law. This remarkable and timely book draws together all the strands of law in this controversial area, both de facto and de jure. Its comprehensive coverage includes such eminently useful materials as the following: thirty actual company policies regarding on-line communications, from a wide variety of business sectors, with detailed analysis; texts of four company codes of practice; actual views of trade unions and employers? organizations; analysis of relevant existing laws on access, monitoring, liability, sanctions, and the rights of employee representatives; two proposed model codes of practice, one for the individual user and one for employee representatives; and, appendices including Belgium?s National Collective Agreement No. 81 and the regulatory bill and advisory opinions that led up to it. The authors? focus on practice is advantageous, as it brings the central issues and conflicts into high relief. The close analysis and investigation of how employers, trade unions, and legislative and advisory bodies are dealing with the essential matters?which include communications facilities at work, employer?s prerogative, the company?s rights of ownership and disposal, and the fundamental privacy rules of legitimate purpose, proportionality, and transparency?provide very valuable guidance to parties in any country concerned with developing a viable set of legal principles and rules for this challenging and unsettled area of labour law.

Social Media as Surveillance Daniel Trottier,2016-04-01 While there is a lot of popular and academic interest in social media, this is the first academic work which addresses its growing presence in the surveillance of everyday life. Some scholars have considered its impact on privacy, but these efforts overlook the broader risks for users. Commonsense recommendations of care and vigilance are not enough, as attempts to manage an individual presence are complicated by the features which make social media 'social'. Facebook friends routinely expose each other, and this information leaks from one context to another. This book develops a surveillance studies approach to social media by presenting first hand ethnographic research with a variety of personal and professional social media users. Using Facebook as a case-study, it describes growing monitoring practices that involve social media. What makes this study unique is that it not only considers social media surveillance as multi-purpose, but also shows how these different purposes augment one another, leading to a rapid spread of surveillance and visibility. Individual, institutional, market-based, security and intelligence forms of surveillance therefore co-exist with each other on the same site. Not only are they drawing from the same interface and information, but these practices also augment each other. This groundbreaking research considers the rapid growth and volatility of social media technology by treating these aspects as central to social media surveillance.
